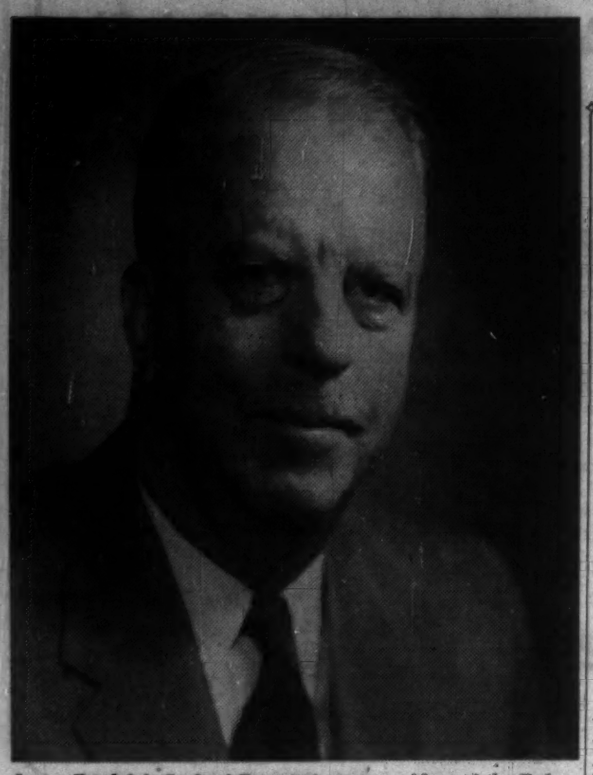
Vol. LIII Member of Audit Bureau of Circulations ★ Publication Office: Toronto, November 28, 1959 ★ Twenty-five Cents an issue, Eight Dollars a Year No. 48

Retail Credit Spokesman



James Randolph Croft of Toronto is new president of the Federated Council of Sales Finance Companies, an organization of 29 companies in this field and their 390 branch offices across the country. Croft, vice-president of Traders Finance Corp., will head an association whose members hold $785 million in retail instalment credit outstandings—about 70% of total sales financing business done in Canada.

NATION'S BUSINESS

They've No Doubts About 1960

To a sizable cross-section of top Canadian executives, the prospects for business next year look bright indeed. Most expect their companies will chalk up very substantial sales gains in 1960. In a majority of firms, profits will rise appreciably.

That's the answer you get when you add up replies to questions FP has just asked leading manufacturers and merchandisers. Not every company, of course, is being swept along into this the final and highly prosperous phase of the current business cycle—but the over-all expectation is for expansion (see p. 23).

Sales expectations alone provide good cause for optimism. Some 57% of firms in the FP survey expect their sales will be 3% to 10% above 1959 totals. Another 13% of the companies are anticipating much bigger gains—at least 10%. In all, 70% of all companies queried expect higher sales.

And for many of these firms, 1960 advances will come on top of mighty big advances in 1959. Just a year ago, 73% of executives in the FP survey predicted higher sales in 1959 for their firms. That's exactly how 1959 is turning out—sales gains in 73% of all companies.

Here is another very important fact from the 1960 survey: The steady, sturdy growth expected in 1960 may well be growth achieved with relative price stability. The so-called "inflation psychosis" is fading.

This year, almost three quarters of all executives predict the 1960 prices of the products they sell will be "about the same" as in 1959—and almost two thirds of all executives look for little change in the cost of materials they buy.

* * *

Supremely Impracticable

"I am not in favor of a capital gains tax because I think it is a very poor way in which to raise revenue, it is too complex and too troublesome to administer. Finally, I am quite convinced that fairness in a tax system does not require such a form of levy."

So says one of Canada's top tax experts, A. K. Eaton, former assistant deputy minister of Finance in charge of taxation, now an independent tax consultant (see p. 3).

The very complexity of a capital gains tax makes it supremely impractical and, if introduced, the tax would be monstrously irritating to government administrators and ordinary taxpayer alike.

Such a tax, if imposed now, would require everybody to establish somehow, somewhere, the value of every piece of his property so that in 15 or 20 or 50 years he could prove that, upon sale, his capital gain was so many dollars, after taxes, depreciation, maintenance and repairs. Aside from administrative difficulties, this would produce floods of litigation, says Eaton.

Who wants to put up with that sort of dizzy bookkeeping to help raise a negligible amount of money—perhaps less than 1% of Ottawa's annual needs?

* * *

When Ignorance Isn't Bliss

The Canadian taxpayer is minus one tremendous advantage and privilege long accorded in the U. S. to American taxpayers.

Business firms and individuals there have for many years been able to get advance rulings from their Bureau of Internal Revenue on the tax consequences of proposed business actions (see p. 5).

In Canada, the taxpayer has no such aid. Instead he has to play an extremely hazardous version of the old game of Truth or Consequences. If his interpretation of legal truth isn't the same as the tax collector's, the consequences can be unexpected and extremely expensive.

A regular and formal system of advance rulings by the Department of National Revenue would eliminate almost all of this destructive uncertainty now besetting the taxpayer. And, judging from U. S. experience, our tax department would find the rulings a ready-made means of keeping its own men up-to-date on policy and save itself expensive litigation into the bargain.

If the current administration is really in a mood to streamline civil service operations, it would be hard to find a better place to start than in the offices of National Revenue.

'MOST IMPORTANT'

Six Mines Share Tungsten Strike

The discovery climaxes a sentimental journey for Karl Springer, and it could put the boom touch on this Yukon-N.W.T. area . . .

BY FRANK KAPLAN

A tungsten discovery on the Yukon - Northwest Territories border, worked on quietly for a year, shapes up as one of the most important in the world.

This find is in the Mackenzie Mountains, 150 mi. north of Watson Lake on the Alaska highway, 900 mi. from Vancouver, and near the South Nahanni River.

It is already a sizable drilled orebody with exceptionally high values. Engineers estimate a reserve of 1,166,351 tons averaging 2.184%, the equivalent of 2,547,310 short ton units of WO3.

Details, p. 43.

Main participants in the discovery, which so far has cost $250,000 and will probably involve another $400,000 this year, **Leitch Gold Mines, Highland Bell Mines, Area Mines, Dome Mines, Ventures Ltd. Lake Expanse Gold Mines** has a small interest.

The find is practically a repeat performance by the companies that sparked the Mattagami syndicate, which made one of the more important mineral discoveries of recent years.

For this tungsten deposit, like Mattagami Lake, represents a sentimental journey home by one of Canada's northern pioneers—Karl Springer—a prospector turned successful businessman.

Both Mattagami Lake in northwestern Quebec and the Mackenzie Mountains area were tramped by a young Springer in the search of mineral wealth.

Today, using modern techniques and pooling resources of several companies in massive mine - searching expeditions, Springer is confirming his youthful expressions.

At Mattagami Lake, the syndicate secretly drilled out some 14 million tons of 11% zinc, since boosted to well over 20 million tons of almost 13% zinc by a mine-giant syndicate made up of **Noranda Mines, McIntyre Porcupine Mines** and **Canadian Exploration** (subsidiary of **Placer Development**).

Springer has been sending prospecting parties into the tungsten discovery area for 16 years. **His persistence has paid off.** It should lead to a rapid acceleration of activity in the area, which has been attracting attention because of other mineral finds and major gas drilling programs to the south in northeastern British Columbia.

Predict Shotgun Wedding For Reluctant Airlines

By CLIVE BAXTER

Canada's two international airlines may pool their overseas services — willingly or not.

That was the message many airmen read into a statement last week by Transport Minister Hees in which he noted that both **Trans-Canada Airlines** and **Canadian Pacific Airlines** had ordered the same long-range jets and that an era of increased co-operation could be expected.

TCA gets its first jet late next month, CPA in 1961.

Right now the managements of both lines make little secret of their distaste for co-operation. But the Hees statement indicates they may not have much alternative.

Pooling is increasingly popular in airline circles. TCA has signed a pool agreement with British Overseas Airways Corp. Almost all major European carriers except The Netherlands' KLM are in one pool arrangement or another.

It was common knowledge that five years ago TCA and CPA were giving serious consideration to a pooling of equipment.

The idea was that one aircraft could take off as a TCA flight from London, continue west to Vancouver where a CPA crew would take it on to Tokyo or Australia. This would give maximum utilization of each plane.

Operationally it made a lot of sense and few airmen considered it just coincidence that CPA used a color scheme identical to TCA's.

That sort of talk ended, apparently for good, last year as the two lines fought in front of the Air Transport Board over CPA's request for a trans-continental air route. Since then, neither line has even bothered to pretend friendship within the "fraternity of flyers".

John Baldwin, Deputy minister of Transport, told FP this week:

"Policy on airlines has been clear since Mr. Hees made the speech in Timmins outlining his program.

"A country with a small population like Canada cannot afford to have two overseas carriers competing with each other for business. Outside Canada they should co-operate."

As the two do not compete on any specific route, it is hard to see how a direct pooling service overseas could be worked out. Most airline men predict government pressure to force the two lines to combine equipment, maintenance facilities and schedules to offer the public one large and interrelated Canadian overseas airline.

First step is expected to be

(Continued on page 8, col. 4)

Plan Centre To Study Sub-Arctic

From Our Own Correspondent

SASKATOON — Look for North America's first Centre for Northern Studies to be set up at the University of Saskatchewan.

A committee of university faculty members has been formed to consider detailed proposals.

Aim:

To foster northern studies that would advance knowledge and aid northern development.

Problems that might receive early attention:

- **Techniques and methods** of construction in very cold areas, including engineering in frozen ground, heat transfer in structural materials, design for houses located where there are long, dark periods.
- **Community planning** for northern centres, including water, sewage and sanitary problems.
- **Cultural integration** of indigenous peoples.
- **Biological problems,** such as insect control.
- **Crop, vegetable, and garden** problems in areas of short growing periods.

The centre would study primarily the sub-Arctic, the northern half of Saskatchewan spilling over into the Northwest Territories and neighboring provinces.

Funds? "Available from a number of sources," says university president Dr. J. W. T. Spinks.

Canada Selling Aluminum To Red China

By JACK McARTHUR

MONTREAL (Staff) — Red China has been added to the market for Canadian aluminum.

Having watched other West Europe suppliers make sales of aluminum ingot to China during the last year, **Aluminum Co. of Canada** decided to enter the market.

Shipments to Red China amount to about 1% of company's output this year, according to Alcan officials. This might mean 5,000 tons or a little more.

The decision to sell to China, a reversal of the company's previous position, was based on the fact that other companies were getting business and there is no obstacle in Canadian policy to such trade.

However, in addition to Western competition, there may be several other reasons that bear on the change in policy, including:

- **Alcan ingot now moving to China** is at world prices, not at the cut-rate prices that appeared probable in a Chinese feeler of a year ago, which was rejected.
- **Canadian government policy** is to encourage peaceful trade with mainland China.
- **There has recently been a lessening of world tensions,** a greater hope for peaceful, legitimate trade between the West and the communist world.

The latter may be most important of all.

Alcan said its "no" of last winter was a simple result of what it felt to be an intelligent sales policy for the time, although the U. S. government could not prevent the Canadian company from selling to Red China.

However, it was felt at the time that U. S. customers, voters and politicians might resent it.

Now, apparently, a less hostile world atmosphere—plus the ability to sell to China at world prices—has meant a change.

Meanwhile, the company has also been competing with some of the North American producers in selling small quantities to communist nations in Eastern Europe.

Oddly enough, Russia continues to ship into a traditional Alcan market—Great Britain—but at steadily rising prices.

According to British figures, Russia sent 13,400 tons of aluminum to Britain in this year's first nine months.

Total British imports in the period were 198,000 tons, including 118,000 from Canada.

It's theorized that Russia's shipments to Britain—instead of to other communist nations, which obviously need the aluminum—result from the Soviet's increased need to finance purchases of materials in Britain.

International markets for aluminum have improved considerably in recent months. Alcan's parent, **Aluminium Ltd.,** in its third quarter report issued about 10 days ago mentioned this improvement.

Sales to non-producers were up generally 22% from the first nine months in 1958. A fairly substantial portion of the increase is understood to be in the U. S.

All reports from Britain and Europe indicate best year for aluminum since 1956.

In Western Europe, the industry's activity is at a peak, aided by a central economic upsurge.

Canadian exports to South America are about equal to last year's but disappointing in relation to the potential market. Currency troubles hurt sales.

Strong demand in Japan this year has produced substantial imports from Canada. Hong Kong, with growing local fabricating capacity, will use more

(Continued on page 8, col. 6)

Deal Wanted In Caribbean

By VINCE LUNNY

MONTREAL (Staff) — Plans of a Canadian syndicate to participate in a $100 million low-cost housing development in Cuba have been suspended (FP, Feb. 14).

Reason: No market for Cuban-guaranteed bonds.

Syndicate now is scanning opportunities in other Caribbean countries.

Spokesman for the group, principally Montreal industrialists whose names have not been disclosed, is Henry Marvin, executive vice-president of **Allied Cigar Corp.**

He said plans had been made to finance a paper mill, schools and a medical centre as well as 30,000 prefabricated homes in Cuba. But with financing of Cuban projects now impossible, the entire scheme has been shelved.

The Outlook

Here's What To Look For In '60 Plans

FP survey shows relative price stability and a very high level of sales and profits . . .

By DALTON ROBERTSON

Possible new element to consider when planning for business in 1960: Relative stability in most prices, despite a very high level of production, sales, employment and income.

This is one major conclusion to be drawn from FP's survey of business experience and expectations (p. 23) which shows:

- **Some 72% of all companies queried expect to charge no more for their products in 1960 than they did in 1959.** Only 23% plan to boost prices while 4% will drop them.
- **Just about 59% expect they will be paying about the same for materials they buy next year.** Only 32% anticipate higher charges.

Compare that with a year ago when fears of inflation were more widespread:

- Only 61% expected to be able to hold prices steady in 1959 and 35% planned to boost theirs. **(Actually the worst didn't materialize: 68% held the line and only 20% began levying higher charges.)**
- Some 53% anticipated little change in material costs in 1959 while 40% expected to have to pay more. (Only 32% had to pay more, it turned out, and 56% were charged about the same as a year earlier.)

* * *

The FP survey also adds weight to the view that the 1958-60 business expansion will be more modest than that of 1955-57.

The reason: FP's sample of companies expect to make only a small over-all increase in expenditures next year for new plants, new equipment. A sharp expansion of such spending

(Continued on page 8, col. 4)

Toronto Set for $1 Million Whoop-de-Doo for Grey Cup

The Grey Cup whoop-de-doo gets jazzier every year.

This week, retail and service outlets in Toronto were ready for what looks like the biggest bonanza yet.

Extra spending should pour over $1.3 million into tills of shops, car parks, hotels, restaurants and city transportation facilities.

In addition, rail and air lines will bring in an estimated 4,000 football fans from the West, majority from Winnipeg.

This is the sporting world's biggest annual, one-shot flip to a local economy.

Helping boost the activity this year, as Winnipeg meets Hamilton Saturday:

An extra 12,000-15,000 fans will get into CNE Stadium compared with previous games at smaller Varsity Stadium.

Big gainers again (as in 1957) will be parking lots, taxis and inter-city bus transport firms to accommodate the inflow from nearby Hamilton.

There are 10 special **TCA** flights, two special trains out of Winnipeg by **CNR** and **CPR,** plus capacity - booked regular flights and runs bringing in fans from western Canada and more distant eastern cities.

An indicator of the sweep of interest in the game:

Special radio and television coverage running to a record total of around 600 min. from Friday to Saturday, an estimated TV game audience of over 5.5 million viewers.

Biggest-Ever Yule Sales Coming Up

BY RAY MAGLADRY

Retail business — paced by climbing department store sales —is rolling up momentum for its most hectic month of the year.

The signs are:

It will probably be the biggest December on record in terms of dollar sales volume.

Retailers are looking confidently for a repeat of the 1958 spurt in pre-Christmas shopping —a burst of spending that carried sales nearly 8% ahead of previous December.

Most retailers expect the yearly gain to fall into the 6%-10% bracket this year.

Department stores this fall have been chalking surprising gains, averaging around 8% above 1958 in last half dozen weeks.

One analyst believes the stage is set for "spectacular gains" before Christmas in department store field.

His reasons, and they apply generally to other retailers: A much better winter employment outlook this year and the absence of major labor strikes.

Signs & Portents

LOOK FOR a battle of brains—electronic brains. Giants in field, such as **IBM** and **Burroughs,** will boost sales efforts. Smaller firms will try to get or keep a foot in the door.

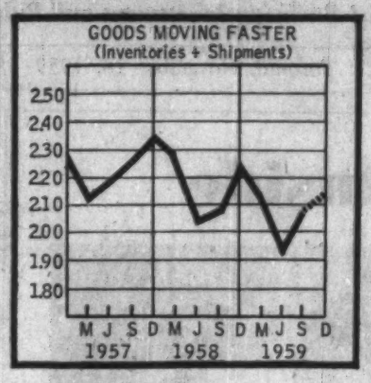
Trend of Business

Manufacturers' shipments rose 4.4% in September to $1,941 million from previous month's $1,859 million, reducing inventory/shipments ratio to 2.07 from 2.15. Month's ratio is slightly below year-earlier figure of 2.09 and compares with 1.91 in June, 2.14 in March and 2.35 in January, 1959. First nine months' shipments of $17,079 million were 6% above $16,162 million in like 1958 period.



October exports set **record for the month** at $472 million, up 3.6% from $455 million a year earlier. Month's gain, following a 15% rise in September, brought first nine months' total to $4,194 million, 3% above $4,072 million in like 1958 period. Most of October gain and all of cumulative gain was due to increased shipments to the U. S.

Industrial production at record level in September as seasonally adjusted index (1949 — 100) touches 166.9, up 2.3% from preceding month's 163.2 and 10.5% ahead of 151.0 a year earlier. Mineral production jumped 6.6% from August figure, manufacturing gained 1.2%, a 3.5% rise in durables being partially offset by a 0.8% decline in non-durable output.

Employment fell less than seasonally between September and October according to the Department of Labor and Bureau of Statistics which estimate persons with jobs at mid-October at 6,053,000, down 25,000 from month earlier but 189,000 more than a year ago. Persons without jobs totaled 237,000 (vs. 313,000 in September, 1958), representing 3.8% of the labor force (5.1%).

Retailers bump September sales 5.8% to $1,301 million from 1,230 million a year ago, lifting first nine months' sales 5.3% to $11,629 million ($11,048 million last year). January-September trade was greater than a year earlier in all provinces with gains grouped between 8.7% for Manitoba and 4.1% for Quebec.

More mink for milady. Canadian fur farmers plan to pelt 1,022,000 mink in 1959-60 season, 4% above last year's 981,000. Prospective peltings are in proportion to increased crop of mink kits (1,069,700 vs. 1,025,500). Increases are expected in number of standard, brown, beige and white mink pelts; number of grey and blue pelts will be smaller than in 1958.

Overseas wheat sales in week ended Nov. 4 amounted to 5.9 million bu., placing Aug. 1-Nov. 4 total 4% ahead of last year at 70 million bu. (67 million bu.). Visible supplies in all North American positions at Nov. 4 aggregated 370 milion bu., down 1% from year-earlier total of 374 million bu.

Producers Seeks To Build Spur

From Our Own Correspondent

REGINA — **Producers Pipelines Ltd.**, Regina, has applied to the Saskatchewan Department of Mineral Resources for permission to build a 2-in. spur pipeline to connect the Pinto oil field close to the Saskatchewan-North Dakota border with the company's existing system in the Steelman field.

About 8 mi. of line will be required.

Objections to the proposal, or submissions supporting it, were to be in the hands of the department last week.

As a result of such objections, if any, a public hearing could be called to study the application.

Central Mortgage Approves Projects

Central Mortgage & Housing Corp., has approved these loans for construction of low rental housing projects for elderly people:

Hamilton Housing Co., $235,525 for 45-unit project in Hamilton, Ont.

Trafalgar Senior Homes Ltd., $105,557, for 16-unit project in Trafalgar Township, Ont.

Port Coquitlam Senior Citizens Housing Society: for 12-unit project in Port Coquitlam, B.C.

NEW ROTOR ENGINE

Development of an internal combustion engine with only two moving parts — a rotor and crankshaft — is announced by **Curtiss-Wright Corp.** of the U. S. and **NSU Werke** of West Germany. It burns gasoline and is scheduled to go into production next year.

THE FAMOUS 'CHICAS'

By Alfred Dunhill of London **25** in box **$3**

The little cigar with a mild, mellow flavor . . . a prize gift for the man who enjoys a short smoke. Refreshingly new in taste . . . light and pleasing in aroma . . . smart and handsome in size. The finest in giving comes from Dunhill.
Box of 25 ..... $3

Ask the Dunhill Humidor to hold a supply for Christmas giving. Merely give the quantity, the destination and time when the cigars should be sent. The Dunhill Humidor will do the rest.

Capital Gains Tax:

Two views expressed before the Canadian Tax Foundation's annual conference . . .

Why Canada shouldn't have such a tax:

By A. KENNETH EATON
Ottawa fiscal consultant and former Assistant Deputy Minister of Finance

From the broad economic point of view, the capital gains tax is not such a bad tax.

There are some good reasons, however, why I am strongly against such a tax.

• It would be extremely unfair to levy a tax on capital gains measured in dollars until the value of these dollars has been firmly stabilized, that is, until we can be assured that the danger of inflation has been clearly wiped out of the picture.

Under inflation, a tax on so-called capital gains becomes a very unfair and arbitrary tax on capital itself for those compelled at various times to realize on the accrued increase in the dollar value of their property.

The Canadian dollar is worth just about half of what it was 20 years ago.

Let us assume that one of you bought a house in 1939 for $10,000.

Today if the house moved up in value corresponding to the fall in the value of the dollar, your house would be worth about $20,000.

In selling it for that, upon having to move to take a job somewhere else, you would be liable for a tax on your $10,000 capital gain, and would accordingly find yourself far short of the funds needed to purchase in 1959 the same sort of house you had just parted with.

They get around this awkward situation in the U. S. by exempting such a person from tax if he purchases another house within the year of sale of the other one.

This, however, is where complexity takes over.

You cannot cure all the unfairness in the inflation situation by creating exemptions. If you tried, the law would completely bog down in utter complexity, administrative impossibility, with floods of litigation.

The government of Canada should not consider for a minute a tax on capital gains until it has fully demonstrated its ability to maintain a stable dollar with which capital gains could be truthfully measured.

• As an ex-Finance Department official, I think my most deeply rooted objection to a capital gains tax is its complexity.

It is just not a good way to raise revenue.

If the government needs an additional $100 million of revenue (and it does), there are many better and fairer ways of getting it than imposing a general tax on capital gains.

A capital gains tax imposed, say, in 1960, to apply then and thereafter would require everybody to establish somehow, somewhere the value of all his property, piece by piece, in that year, so that 15, 20 or possibly 50 years hence he could declare and prove that upon sale of the property his capital gain was exactly so many dollars, no more, no less, after, of course, having kept track of all such things as taxes, depreciation, maintenance and repairs for all the intervening years.

The mere statement of these kinds of requirements is sufficient to make it obvious that this would be a very, very troublesome sort of tax both for the government and the taxpaying public.

• A tax on capital gains is merely an Estate Tax in a hurry.

It taxes capital gains when they are realized instead of waiting at the end of the road to pick up the revenue through a tax on the total estate.

Looked at analytically, it is quite anomalous to build a tax on capital gains into and make of it an integral part of a graduated tax on income.

Income tax is a tax on a flow of income. Being a flow, it has to be measured by reference to a period of time.

We use an arbitrary 12-month period. Personal exemptions then are related to the length of this accounting period. The graduated rate structure is tailored to fit the length of the accounting period.

Imagine trying to inject capital gains logically into this income tax framework when the gain realized in any year may have been accruing for only a few months, a year, five years, 20 years, or perhaps even 40 years.

It just does not make sense. So the bright boys have to start tinkering. A line is drawn between short and long-term gains. "Long" may be two years or 40 years—both periods are long.

A graduated rate structure applied to these two long-term lumps of gain would be unfair to the taxpayer, and he may be given a choice between a flat rate tax or taking only one half of the gain into income.

And so it goes, trying to fit square pegs into round holes.

I hesitate even to mention it, but I cannot resist suggesting that if capital gains simply **had** to be taxed, the best way would be to put on a flat rate excise tax and make no pretence whatsoever at associating it with the income tax structure.

I hasten to add, however, that all the horrible complexities of valuation and establishing a base point would still be encountered under an excise tax.

• Some question whether in a tax system which must always be held to be fair and reasonable, recognizing the principle of taxation according to ability to pay, it is fair to allow capital gains to go untaxed at the time of realization.

Capital gains are taxed under the Estate Tax on the taxpayer's death. Some people, of course, spend their capital gains in a most unbourgeoislike fashion instead of saving them, and where this happens capital gains will not be taxed on their death.

If, however, they have spent their gains instead of allowing them to accumulate, they will have run into federal sales and excise taxes on their expenditure, as well as provincial sales taxes in most directions where their money was spent.

In the U. S. there is no general sales tax corresponding to that in Canada.

Even assuming that the money made on capital gains never bore any tax whatsoever, it would still not necessarily mean that there was any unfairness in the tax system.

Government assistance in the field of housing is fast making property owners of all who, in the terminology of some people, would be called the proletariat.

My guess is that from now on less and less will be heard about the taxation of capital gains, for this very reason — that such a tax if broadly based would potentially catch nearly everybody in the country.

Essentially my position is that economic arguments pro and con the tax are not very important.

I am not in favor of the tax because I think it is a very poor way in which to raise revenue, it is too complex and too troublesome to administer.

Finally, I am quite convinced that fairness in a tax system does not require such a form of levy.

Why the U.S. has one:

By LAWRENCE H. SELTZER
Professor of economics, Wayne State University, Detroit.

While the U. S. economy was predominantly agricultural in its early years, capital gains quickly became a common and conspicuous source of private wealth.

In many transactions, gains from the sale of capital assets constituted the major type of profit contemplated.

• In this environment, capital gains became scarcely distinguishable from ordinary profits as a familiar source of private consumption wealth.

• A second reason why the U. S. climate of opinion became favorable to the taxation of capital gains as income was the rise of the corporation as the dominant form of business enterprise.

Stockholders avoid graduated personal income taxes on profits that their corporations retain for expansion or debt retirement.

By corporate reinvestment of all earnings above the amount desired by the stockholders for current consumption, a family or other small group could thus forever avoid personal income taxes on all but a small fraction of their imputable business incomes, if capital gains were not taxed.

It is true that the corporation income tax may be said to provide a kind of general offset, but the corporate tax makes no distinction among stockholders of varying incomes.

• The third reason was the emergence of the view that the concept of income appropriate for personal income taxation need not be identical with concepts of income appropriate for other purposes.

For the whole period 1917-1956, some $78 billion of capital gains in excess of capital losses was reported on individual income tax returns in the U. S. by those with positive incomes.

Nevertheless, it is easy to exaggerate the governmental revenues likely to result from taxing capital gains.

A preferential rate for gains and an allowance for losses, both justified on various grounds, substantially reduce the revenue potential.

In the stock market boom of 1926-29, with effective tax rates on long-term net capital gains ranging downward from a ceiling of only 12½%, and with personal exemptions so liberal that they excluded all but a few hundred thousand persons from income tax, the U. S. raised somewhat more than $1.5 billion in capital gains tax revenues in four years.

But, by reason of the related allowances for capital losses, the Treasury sustained net revenue losses from capital gains and losses in the next three years.

Since 1943, however, the net revenues from the tax treatment of capital gains and losses have been substantial in absolute amounts—$400 million to $1,700 million a year from individuals and taxable fiduciaries.

But in most years they have been below 5% of individual income tax revenues.

Simplified Taxes Not Really Simple

Here's the kind of talk that makes a tax expert twitch . . .

By J. K. EDMONDS

One of the best ways to make a tax expert twitch nervously is to suggest that the tax system should be simplified.

The experienced tax man knows that a "simple" idea (like an excess profits tax, for example) will frequently produce hideously complex results directly opposite to the intention of those who introduce the idea.

What's more, the tax system of a modern state is like those structures of toothpicks that people used to build in the 1930s:

Moving a single toothpick drastically alters the relationships of all the other parts of the structure and may turn it into an entirely new and unattractive creation.

As a result, tax authorities are always most reluctant to think about basic changes in the system of taxation.

When an inequity or anomaly appears, the tendency is to add another toothpick to try to balance the structure rather than shifting things around to remove the cause of the trouble.

Over time, the complexity of the system increases (Parkinson could derive another law about this) until it reaches the point where the ordinary taxpayer feels hopelessly confused.

At this stage, he is apt to begin to suspect that he is not being fairly treated.

Whether his suspicion is justified or not, it is dangerous.

Taxes must not only be fair, they must appear to be fair, in a modern democracy.

When the taxpayer complains about the complexity of taxes, the experts often respond by simplifying the tax forms; by making it easier for him to calculate what he owes.

That is not what he means at all.

His concern is not with an evening's arithmetic, but with the much more fundamental question of his position within the tax structure.

As he fills in his simple T-1 Special form he wonders whether the formidable computations of other taxpayers give them a financial advantage.

The more special cases and extra deductions that are added each year, the more he wonders. The more he wonders, the more he resents paying taxes at all.

And the more the average taxpayer resents paying taxes, the more the temptation for the government to use inflation rather than taxation to divert resources to its own use.

All of which adds up to a powerful argument in favor of trying to devise a tax pattern that is as simple as possible—not from the administrator's point of view, but from the viewpoint of the taxpayer who is trying to understand where the money comes from and where it goes.

No one could claim that our present barnacle-ridden tax structure has this kind of simplicity.

A country deriving much of its earnings from natural resources that are subject to depletion is bound to have complex taxes.

Add to that the recent rapid rate of change in our sources of income, and the inter-government transfers made necessary by our 19th century constitution, and it's easy to see why it takes an expert to understand how we are taxed.

It would be extremely difficult, but surely not impossible, to make some simplifying changes.

Two occasions will arise in the 1960s when it might be appropriate to do so:

• One is the negotiation of the new dominion-provincial tax agreements, in 1962.

Judging by what Premiers Sauvé and Bennett are saying these days, there will be pressure for some fundamental changes in the tax agreements.

If so, some hacking away at the complexities of the tax structure might be done at the same time (much as a doctor may remove your appendix while he happens to have your stomach open).

• The other occasion is the centenary of Confederation.

What more appropriate way to mark the date than by freeing ourselves of some of the tax peculiarities we've picked up in our 100 years of existence?

At this point, of course, the politicians as well as the taxmen begin to twitch.

But if a proposal for overhauling the tax features of the BNA Act were presented as part of a general effort to devise a tax pattern that makes more sense to the taxpayer, the political hazards might not be as great as is now feared.

With seven years to think along these lines, surely some astute Canadian might find a formula that would work.

Kodak Employees Split $1 Million

A wage dividend of $1,032,000 will be split among 1,500 employees of **Canadian Kodak Co.** next March.

It is the 47th such dividend declared by Kodak since 1912.

Eligible employees will receive $34.50 for each $1,000 earned during 1955-59 period. About $893,000 was paid last March at rate of $32.62 for each $1,000 earned during 1954-58.

Dividends to employees are based on cash dividends paid on common stock of the parent firm, **Eastman Kodak, Co.,** during the year, and on employee's earnings over preceding five years.

When you want to turn a thousand facts into one clear picture the Remington Rand

UNIVAC COMPUTING SERVICE CENTER

can help you

UNIVAC DATA-AUTOMATION analyzes the countless facts of any situation at fantastic electronic speed—gives new insight into operations and markets to decision-making management. And now UNIVAC Data-Automation is available to every organization large or small. At the Remington Rand UNIVAC Computing Service Center work is done on a contract basis. You can have your sales analyses and forecasts, market analyses, financial reports and operations research studies, processed far more rapidly and accurately than has ever before been possible. Wherever you need a clear picture of the situation, use UNIVAC Data-Processing . . . at the Remington Rand UNIVAC Computing Service Center.

Nevertheless, it is easy to exaggerate the governmental revenues likely to result from taxing capital gains.

A preferential rate for gains and an allowance for losses, both justified on various grounds, substantially reduce the revenue potential.

In the stock market boom of 1926-29, with effective tax rates on long-term net capital gains ranging downward from a ceiling of only 12½%, and with personal exemptions so liberal that they excluded all but a few hundred thousand persons from income tax, the U. S. raised somewhat more than $1.5 billion in capital gains tax revenues in four years.

But, by reason of the related allowances for capital losses, the Treasury sustained net revenue losses from capital gains and losses in the next three years.

Since 1943, however, the net revenues from the tax treatment of capital gains and losses have been substantial in absolute amounts—$400 million to $1,700 million a year from individuals and taxable fiduciaries.

But in most years they have been below 5% of individual income tax revenues.

Simplified Taxes Not Really Simple

Here's the kind of talk that makes a tax expert twitch . . .

By J. K. EDMONDS

One of the best ways to make a tax expert twitch nervously is to suggest that the tax system should be simplified.

The experienced tax man knows that a "simple" idea (like an excess profits tax, for example) will frequently produce hideously complex results directly opposite to the intention of those who introduce the idea.

What's more, the tax system of a modern state is like those structures of toothpicks that people used to build in the 1930s:

Moving a single toothpick drastically alters the relationships of all the other parts of the structure and may turn it into an entirely new and unattractive creation.

As a result, tax authorities are always most reluctant to think about basic changes in the system of taxation.

When an inequity or anomaly appears, the tendency is to add another toothpick to try to balance the structure rather than shifting things around to remove the cause of the trouble.

Over time, the complexity of the system increases (Parkinson could derive another law about this) until it reaches the point where the ordinary taxpayer feels hopelessly confused.

At this stage, he is apt to begin to suspect that he is not being fairly treated.

Whether his suspicion is justified or not, it is dangerous.

Taxes must not only be fair, they must appear to be fair, in a modern democracy.

When the taxpayer complains about the complexity of taxes, the experts often respond by simplifying the tax forms; by making it easier for him to calculate what he owes.

That is not what he means at all.

His concern is not with an evening's arithmetic, but with the much more fundamental question of his position within the tax structure.

As he fills in his simple T-1 Special form he wonders whether the formidable computations of other taxpayers give them a financial advantage.

The more special cases and extra deductions that are added each year, the more he wonders. The more he wonders, the more he resents paying taxes at all.

And the more the average taxpayer resents paying taxes, the more the temptation for the government to use inflation rather than taxation to divert resources to its own use.

All of which adds up to a powerful argument in favor of trying to devise a tax pattern that is as simple as possible—not from the administrator's point of view, but from the viewpoint of the taxpayer who is trying to understand where the money comes from and where it goes.

No one could claim that our present barnacle-ridden tax structure has this kind of simplicity.

A country deriving much of its earnings from natural resources that are subject to depletion is bound to have complex taxes.

Add to that the recent rapid rate of change in our sources of income, and the inter-government transfers made necessary by our 19th century constitution, and it's easy to see why it takes an expert to understand how we are taxed.

It would be extremely difficult, but surely not impossible, to make some simplifying changes.

Two occasions will arise in the 1960s when it might be appropriate to do so:

● **One is the negotiation** of the new dominion-provincial tax agreements, in 1962.

Judging by what Premiers Sauvé and Bennett are saying these days, there will be pressure for some fundamental changes in the tax agreements.

If so, some hacking away at the complexities of the tax structure might be done at the same time (much as a doctor may remove your appendix while he happens to have your stomach open).

● **The other occasion is the centenary of Confederation.**

What more appropriate way to mark the date than by freeing ourselves of some of the tax peculiarities we've picked up in our 100 years of existence?

At this point, of course, the politicians as well as the taxmen begin to twitch.

But if a proposal for overhauling the tax features of the BNA Act were presented as part of a general effort to devise a tax pattern that makes more sense to the taxpayer, the political hazards might not be as great as is now feared.

With seven years to think along these lines, surely some astute Canadian might find a formula that would work.

Kodak Employees Split $1 Million

A wage dividend of $1,032.000 will be split among 1,500 employees of **Canadian Kodak Co.** next March.

It is the 47th such dividend declared by Kodak since 1912.

Eligible employees will receive $34.50 for each $1,000 earned during 1955-59 period. About $893,000 was paid last March at rate of $32.62 for each $1,000 earned during 1954-58.

Dividends to employees are based on cash dividends paid on common stock of the parent firm, **Eastman Kodak, Co.,** during the year, and on employee's earnings over preceding five years.

When you want to turn a thousand facts into one clear picture the Remington Rand

UNIVAC COMPUTING SERVICE CENTER

can help you

UNIVAC DATA-AUTOMATION analyzes the countless facts of any situation at fantastic electronic speed—gives new insight into operations and markets to decision-making management. And now UNIVAC Data-Automation is available to every organization large or small. At the Remington Rand UNIVAC Computing Service Center work is done on a contract basis. You can have your sales analyses and forecasts, market analyses, financial reports and operations research studies, processed far more rapidly and accurately than has ever before been possible. Wherever you need a clear picture of the situation, use UNIVAC Data-Processing . . . at the Remington Rand UNIVAC Computing Service Center.

THE SEAWAY—another job for United Steel engineered equipment

This mighty dredge dipping deep into the St. Lawrence to help make the Great Lakes an "eighth sea" for world mariners . . . a steel company's giant ore unloading bridge that takes 20 tons with one bite . . . an imaginatively designed precision hydraulic press that resistance heats while it stretch straightens uranium bars; these are only a few examples of the equipment United Steel engineers and builds, and the places where they work.

Add to this; structural steelwork for bridges and buildings, steel plate fabrication, mechanical power transmission equipment, conveyor systems of all types, steel and aluminum warehouse service, castings, and sewage treatment plant equipment.

All are supplied by the United Steel family of Canadian companies where diversification finds a common denominator in "the highest quality standards".

DIVISIONS — Canadian Mead-Morrison, Welland; Dodge Manufacturing, Toronto, Montreal, Kirkland Lake, Sudbury; Forand & Delorme, Montreal; Standard Steel Construction Company, Port Robinson.

Why They're Moving

Facts and comment on what's going on in the market and rumors behind some of the moves.

By P. T. DURRANT

Shares of paper companies, reflecting news of higher output and a dropping premium on the Canadian dollar, have highlighted recent stock market activity as heavy buying boosted prices as much as $3. The Montreal Stock Exchange index of 10 paper companies jumped 12 points to 441 early this week.

Interest in the papers was kindled by announcement that October newsprint output was 9% higher than a year earlier and was the biggest tonnage for any month in history. For the first 10 mos. this year, production was 3.7% ahead of the like 1958 period. Behind the increased production is rising U. S. demand for newsprint (October exports were 9.7% higher than a year ago. FP, Nov. 21.)

In addition, newsprint makers will benefit from the recent easing in the premium on the Canadian dollar over its U. S. counterpart. The premium has dropped below 5% for the first time since mid-September and indications are that it will continue downward. This will mean a better price for Canadian newsprint manufacturers who have had to absorb up to $7 in discount loss for each ton of newsprint sold in the U. S. (Current price is $134 per ton delivered in New York.)

Here's how stocks have risen in the past 10 days and how prices compare with 1958-59 highs and lows:

	Recent	Nov. 13	1959 High	1959 Low	1958 High	1958 Low
	$	$	$	$	$	$
Abitibi P & P	39½	38⅛	40	33	37½	24½
B.C. Forest	12¾	12⅜	15	11¼	15	8⅝
Cons. Paper	41	38¾	43	36	43	28
Gt. Lakes P	40½	36½	45½	35¼	40	27⅛
Powell River	17½	16⅝	17⅞	16	...	...
St. Law. Corp.	18¼	16¼	19½	13½	18	12

Loblaw Inc. moved up $7 to $134 in early trading this week on news that company is planning a 10-for-1 stock split. Present authorized capital of $7.5 million consisting of 1,250,000 $6 par shares (358,027 outstanding) will be reduced to $5 million consisting of 5,000,000 $1 par shares. Issued shares will be split 10-for-1 resulting in outstanding capital of 3,580,270 $1 par shares. Company has no immediate plans for new financing, President J. R. Peachey told FP.

Heavy buying, said to be coming from New York, lifted stock of **Thorncliffe Park** to $13 at mid-week, up from its 1959 low of $9½ on Nov. 11. (High for the year is $13¾.) Company, a Toronto real estate development firm, is believed to be negotiating a share exchange which would give it sole ownership of a large U. S. construction firm. Acquisition may be completed during December.

Cockshutt Farm Equipment advanced smartly in active trade early this week, setting a 1959 high of $19¾. The stock has climbed steadily since selling at $15½ at mid-November. Most of the buying is believed to be from the U. S. Rumors have circulated in recent months that company may merge with a large U. S. farm implement maker; however, management has denied these rumors in the past.

* * *

An increase in the quarterly dividend rate and a bigger year-end extra sent stock of **Canadian Celanese** up from $20 to $21⅞ in a week. Market price later settled back to $21¼. The shares have traded this year between a high of $24⅝, a low of $18. Company will pay 25c per share on Dec. 31 (previous quarterly rate was 20c), plus a 15c extra. Last year's extra was 10c. Disbursements for 1959 (including latest declaration) total $1 per share (90c last year).

Company has reported that, providing no major disruptions occur, both sales and earnings for the full year should be ahead of 1958. Last year's net was equal to $1.18 per common share.

Also higher following announcement of a higher dividend rate for 1960 was stock of **Burns & Co.**, Calgary meat packing firm. Company will pay 20c quarterly next year compared with current rate of 15c. The shares advanced to $14 from $12½ (1959 range, $14¾-$11¼).

Canada Machinery Corp. is making its first payment (50c) to shareholders since 25c was paid in 1955. The stock has traded on only two occasions this year—25 shares changed hands at $15 in January and five shares at $10 in February. Stock is currently quoted at $10 bid, $15 asked.

Monarch Knitting Co. is making good progress in liquidating arrear dividends on its 4½% preferred stock. Company has wiped out $7.50 this year (including payment of $1.87½ on arrears to be made Jan. 2). If the present rate ($1.87½ quarterly) is continued, balance of $5.62½ arrears will be eliminated in October, 1960. No dividend has been paid on common stock (recent price—$9) since 1953.

Imperial Life Assurance will pay 60c per share on Jan. 1, up from previous quarterly rate of 50c. The lightly traded stock last sold at $74, yielding 3.24% at indicated new annual dividend rate of $2.40.

Year-end extras are being paid by **Union Acceptance Corp.**, 10c vs. 15c last year (recent price—$9); **Bowes Co.**, 50c, same as last year ($28); and **Asbestos Corp.**, 20c vs. 70c last year ($26⅜).

Winter Projects Bolster Saskatchewan's Economy

From Our Own Correspondent

SASKATOON — Loans, timber-cutting programs and highway projects are among Saskatchewan government plans to bolster the provincial economy this winter.

Government felt it had to do something because bad weather created "an emergency economic situation" in many areas, particularly the north, and harvesting could not be completed.

A cabinet committee was set up to look into the situation (FP, Nov. 14).

It recommended that the cabinet approve:

- **The 1959-60 winter recreational program** of the Department of Natural Resources, involving labor expenditures of $236,000.
- **The winter and picnic campsite program** of the Department of Travel and Information, involving labor expenditures of $92,000.
- **An $80,000 drainage and channel improvement program** by the Department of Agriculture.
- **Cutting of 13 million bd. ft. of timber** and 5,000 cords of pulpwood by Saskatchewan Timber Board, providing $425,000 in wages.
- **Loaning money to farmers** to buy fodder, seed grain and other farm supplies.

In addition, Provincial Treasurer C. M. Fines, who announced cabinet approval of the recommendations, said highway projects in the north will be undertaken. However, specific details were not mentioned.

Fines said the Timber Board projects would provide employment for 1,000 men.

It was estimated that loans to farmers might involve up to $100,000 in local improvement districts alone.

Also planned: The rural municipalities and the Department of Agriculture are to share costs for storing dry seed and feed grains in local elevators.

Another point discussed by the cabinet:

Municipalities stock piling gravel on grid roads, with the provincial government to share labor costs.

(For roads outside the province's grid program, it was suggested gravel stockpiling could be paid on this basis: 50% federal government, 25% provincial government, 25% municipal government.)

The "emergency farm situation" will be discussed with the federal government this week in an effort to make arrangements to provide further assistance, Fines said.

Quebec-Ottawa Plan May Change Taxation Setup

Federal officials study repercussions of possible deal to settle university grants . . .

By LESLIE WILSON

OTTAWA (Staff) — Premier Sauvé's plan for settlement of the eight-year university grants dispute between Quebec and the Federal government opens up a bewildering variety of fiscal choices for all provinces.

Adoption of the plan could change the basis of federal contributions to universities in all provinces. Ontario is the most likely to be affected.

Negotiations on the scheme were going on this week between Quebec and Federal officials.

Federal officials view it with approval, but the possibility of repercussions with other provinces is causing it to be scrutinized carefully. The scheme could still bog down, but adoption is possible within the next few days.

Mr. Sauvé submitted his proposals for settlement of the university grants dispute at the Dominion-Provincial conference of provincial treasurers last month (FP, Oct. 24).

The proposals:

- Raise the provincial Quebec corporation tax from the present 9% of taxable income above $25,000 to 10% — this boost to be abated against the Federal corporation tax.
- The effective rate of Federal corporation tax in Quebec would drop from the present 41% to 40%.
- On 1959-60 figures, this would give Quebec an additional $9.3 million from which the province could pay grants to its six degree-granting universities. The grants would be of the same amounts as the disputed Federal grants.

One sticking-point is the fact that a 1% boost in corporation tax abatement would give Quebec more money than it would receive under the Federal universities grant scheme.

The Federal grants are paid to universities in all provinces on the basis of $1.50 per head of provincial population, divided up among the universities of a province on the basis of enrolment.

Universities in nine provinces accept them. But Quebec universities, on the instructions of the provincial government, have declined them since 1951. The claim is that acceptance would lead to Federal control of education.

On the basis of present population, Quebec universities would be entitled to receive $7.4 million in university grants in 1959-60.

Under Mr. Sauvé's proposal, the difference between the $7.4 million to which the universities are entitled, and the $9.3 million which the province would receive would be returned to the Federal treasury.

The question is, how? It could be returned directly, or the same result could be achieved by deducting an equivalent amount from other forms of aid paid to Quebec by the Federal government.

Reaching agreement on this question is proving difficult for Quebec and Federal officials.

The other difficulty is a Federal one.

All provinces but Quebec and Ontario rent their corporation taxes to the Federal government, receiving in return a tax rental payment equal to 9% of the amount collected.

The Income Tax Act allows provinces not renting corporation taxes in this way, i.e., Ontario and Quebec, to collect their own corporation taxes up to the level of 9% of taxable income, this to be abated against the Federal corporation tax.

(Ontario goes one better — it collects an 11% corporation tax; but the corporations paying it can't abate the extra 2% against the Federal tax.)

The point is that the tax rental payment and the level of tax abatement have been kept in the past at the same level. If one is moved, the other is moved too.

Thus, if a special arrangement is made for Quebec, and it is allowed to abate an extra 1% of provincial corporation tax against the Federal tax:

- **Ontario will have to be allowed the same abatement,** since the legislation involved, the Income Tax Act, applies generally to Ontario as well as to Quebec.
- **Other provinces could ask for boosts** in tax rental payments.

If Mr. Sauvé's plan goes through, the Federal government is expected to make an equivalent offer to the other provinces. The offer would take this form:

We'll raise the tax rental payment from 9% to 10%. You pay your university grants from this at the same level as before (i.e., on the basis of $1.50 per head of population) and return the difference to the Federal treasury.

The provinces have been trying very hard recently to persuade the federal government to raise the tax rental payments.

Despite the fact that the new scheme wouldn't give them any more money than the present one, some provinces might like to take it, because it would breach a line that Ottawa has been trying hard to hold.

Both Payers and Collectors Need Tax Rulings in Advance

By PAUL S. DEACON

IF YOU find tax laws complicated, you're not alone.

More than 500 lawyers, accountants, economists, government officials and other specialists crowded into the Chateau Frontenac in Quebec City last week to try to sort out their tax problems, and those of their clients.

The occasion: The annual conference of the Canadian Tax Foundation.

They talked about estates taxes, gift taxes, income taxes, sales taxes. They examined federal, provincial and municipal taxes. They even went into U. S. taxes in some detail.

The over-all impression generated was one of complications. And perhaps for that reason, one of the most sensible suggestions that came out of the discussions had to do with simplifying a taxpayer's problems by allowing him to get a ruling on his tax status before he undertakes a transaction.

Advance rulings aren't a new idea. They have been discussed at previous gatherings of the Foundation.

However, they have increasing significance as both tax laws and business become more complex.

The important contribution to last week's discussions on the feasibility of making rulings in advance came from U. S. participants in the conference.

The U. S. has made some provision for advance tax rulings for 20 years now, but only in the past six years have they been publicizing such a service and working to expand its scope and increase its effectiveness.

The service is operated by the central national office of the Bureau of Internal Revenue in Washington, with 270 employees.

Last year they issued 32,000 rulings (mainly advance ones) to taxpayers and 4,000 more to district offices. Of these, they published about 600 or 700, with identification of the firms or individuals eliminated.

In the opinion of those who have had experience with the U. S. system, the advance rulings are a success.

The Bureau deals only with concrete proposals. It won't do the taxpayer's homework for him, and think up a deal that will work. It insists on receiving all the relevant facts, the business reasons for a proposed transaction, and the tax treatment the taxpayer believes is appropriate, with reasons.

It may refuse to make a ruling. The taxpayer may withdraw his request for a ruling before the ruling is made.

There is no appeal to higher authority if the taxpayer receives a ruling that he considers unfavorable. He may go ahead with the transaction, receive the assessment and then contest it in court, however.

In addition, he may change his proposal in the light of the ruling, and submit a new request.

To the extent that rulings are refused or unfavorable, and that court actions result, the system hasn't much to offer over our own.

On the other hand, the reductions in uncertainty as to taxpayers' positions represent a great step forward.

Our own governments so far have resisted the idea of a regular and formal system of advance rulings. Officials in Ottawa have found it hard enough to keep up with assessment of actual tax returns without taking on the additional responsibility for passing judgment on possible future tax situations.

Against this viewpoint, however, are many benefits that advance rulings could bring.

In the U. S., for instance, the Bureau of Internal Revenue has found that advance rulings give early warning of problems likely to arise later.

The published rulings provide a means of disseminating Revenue policy to district tax offices as well as to taxpayers. This also helps head off some contentious problems before they arise.

From the taxpayer's viewpoint, costly inadvertent actions may be avoided.

No taxpayer should have to pay more than is due, any more than governments should receive less than the law calls for. But at times, unexpected tax consequences result from technical tax traps that would have been avoided under an advance rulings system.

Not so many years ago, a normal reorganization of a Canadian company gave rise to assessments against shareholders that totaled many millions of dollars, on profits that the shareholders hadn't even made. Only retroactive legislation retrieved the situation.

An advance ruling system to help avoid such problems would cost money. But estimates of the additional people required to staff such a section in Ottawa put the figure at around 25.

This seems a realistic guess in the light of U. S. experience, where the advance rulings section accounts for only 270 out of 50,000 Revenue employees.

The rulings may take several weeks to produce, but most observers are impressed with the promptness of the service in view of the variety and complexity of the problems with which the service must deal.

In a department where adequate qualified manpower is already a problem, adding an advanced rulings service and the highly qualified people it would need to our national revenue department, may seem a tall order.

On the other hand, U. S. evidence indicates the benefits for government, business and individuals are well worth fighting for.

In the U.S.:

U. S. Bureau of Internal Revenue refuses to make rulings when:

- **Tax uncertainty** is largely a problem of fact (e.g. the valuation of a property is in doubt).
- **Situation** is purely hypothetical.
- **Transaction** is strictly a tax avoidance device, with no business purpose.
- **Case** concerns the estate of a living person.
- **Case** involves policy matters not yet decided.

ANNOUNCEMENT

TRADERS FINANCE CORPORATION LIMITED

N. C. DITTMAN

Mr. W. J. Carey, Vice President — Sales, Traders Finance Corporation Limited, announces the appointment of Mr. N. C. Dittman to the position of Manager —Business Development, a newly created Head Office Department of the Company.

Mr. Dittman joined Traders in 1946 in Winnipeg and served the Company in various capacities, most recently as Central Ontario Sales Manager. In his new position Mr. Dittman will make his headquarters at the Company's Head Office in Toronto. His responsibilities will include the development of present and new sources of business in line with the Company's expansion program.

TV Film Co. Board Changes

Garfield P. Cass has been appointed president of **United Telefilms Ltd.**, Toronto, succeeding Kenneth Kelman who has resigned.

A. C. Cowan and A. B. Cass, both of Toronto, have been elected directors of company. J. R. Booth has resigned from the board.

Mr. Cass, formerly vice-president and general manager, says these changes do not involve any switch in policy or control of the company.

Company is enjoying a good year, the president told **FP**. It looks forward to a great deal of increased business from the projected licensing of new television stations in centres which have only one station at present.

Operations of the subsidiary **United Telefilms Records Inc.** (**FP**, March 28) are very satisfactory, he said.

Company earned $346,423 (9c a share) in year ended Jan. 31, 1959.

COMPLETES DRILLING

Kukatush Mining Corp. has completed 57,000 ft. of diamond drilling on its iron prospect near Timmins, Ont. Results of the program have not yet been released.

Our monthly communique for November lists 10 stocks which we believe will show worthwhile appreciation during 1960.

Copies available on request.

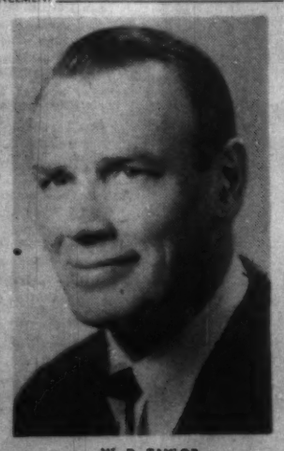
ANNOUNCEMENT

W. A. GOODSON



W. D. TAYLOR

The appointment of W. A. Goodson as Vice President, Advertising of Weekend Magazine and Perspectives, has been announced by John G. McConnell, President of the Montreal Standard Publishing Company (Limited). W. A. Goodson will continue as General Manager of the Family Herald.

The appointment of W. D. Taylor as Advertising Counsellor of Weekend Magazine and Perspectives has been announced by John G. McConnell, President of Montreal Standard Publishing Company (Limited).

W. D. Taylor for the past 20 years has been National Advertising Manager of The Standard and Director of Advertising of Weekend Magazine.

Note

By VINCENT EGAN

A favorite guessing game among investment men this week concerned terms of the new Government of Canada financing expected next Monday.

The issue will go to refinance $300 million 3% bonds maturing Dec. 15. It is believed that the Bank of Canada has already bought up half of the maturing issue.

* * *

A group headed by **A. E. Ames & Co.** is offering $35 million **Bell Telephone Co. of Canada** 6¼% 18-year bonds at par, non-callable for 14 years. Last previous issue, in January, consisted of $50 million 5¼% 31½-year bonds at 98.75 to yield 5.35%.

* * *

It is rumored that a syndicate managed by **Dominion Securities** and A. E. Ames & Co. will offer an issue of **Consumers' Gas Co.** 6½% 20-year sinking fund debentures at par next week, with a 10-year non-call feature. Consumers' shareholders of record Nov. 30 will be offered one new share at $32½ for every six held, with rights expiring Dec. 18. Recent price: $38⅝.

* * *

Alberta Municipal Financing Corp. is on the point of registering with the SEC a $20 million (U.S.) 25-year debenture issue, with **Wood, Gundy** and **First Boston Corp.** as underwriters. Plans for a $10 million Canadian issue (**FP**, Oct. 31) have been withdrawn.

Earlier this year, the corporation issued $50 million (U.S.) 4¾% 25-year bonds, which were sold at 98 to yield 4.88%.

* * *

New Brunswick has obtained a $4,350,000 two-year loan from a Swiss banking syndicate. Province plans to repay the loan next spring, with proceeds of an $8.7 million debenture issue, also to be placed in Switzerland.

* * *

Major acceptance companies have reduced rates of interest paid on their short-term collateral trust notes. New rates are 5¼% on 30-89 day notes, 5½% on 90-179 days, 5¾% on 180-269 days, and 6¼% on 270-365 days.

* * *

Toronto investment dealer **N. L. MacNames & Co.** has sold $125,000 7% 10-year sinking fund debentures of **F. P. Chapple Co.** at par, with a bonus of 150 npv shares per $1,000 debenture.

Founded three years ago, company recently opened its second "junior department store" in Burlington, Ont. President F. P. Chapple is a son of the founder of **Chapples Ltd.**, Lakehead department store chain recently sold to **Great West Saddlery Co.** — but the two companies are independent of each other.

* * *

A new issue of 75,000 npv common shares of **Border Chemical Co.**, Winnipeg (**FP**, Oct. 17), has been sold at $3.10 by **Davidson Securities Ltd.** of Toronto. An additional 50,000 shares, on which Davidson holds an option, are being offered to the public at the same price.

* * *

Municipals: **Sudbury** has issued $1.1 million (U.S.) 5¾% 30-year serial debentures, which have been placed at par by **Midland Securities.** Debentures are non-callable.

* * *

Montreal Metropolitan Corp. is negotiating a $30 million (U.S.) borrowing . . . Financing is being discussed for newly formed **La Société d'Expansion Metropolitaine**, which hopes to build a 23-mi. Montreal subway estimated to cost $163 million. Initial financing would be spread over four years.

* * *

Marc Carrière Ltée. is offering at par $4.5 million first mortgage serial bonds of the Order of the Sisters of the Holy Names of Jesus and Mary. Coupon is 5½% on the 1960-64 maturities, 6% on 1965-69.

* * *

Proposed changes in **United Towns Electric Co.** trust deed could not be made at a meeting Nov. 20, because of lack of a quorum of bondholders. Another meeting is scheduled for Dec. 11, at which those attending automatically will be sufficient for a quorum.

The Newfoundland power firm plans to alter the trust deed to facilitate issue of further first mortgage bonds (**FP**, Nov. 7). It's understood new financing is planned, following the changes.

McIntyre Gold Subsidiaries To Disappear

McIntyre Porcupine Mines is paying out about $2 million for some house cleaning.

Result of the proposed clean-up would be the disappearance of two long-established precious metal mines.

On paper, the cost to McIntyre of the acquisitions would be nearly $17 million, but intercorporate holdings reduce the payout to about $2 million.

In recent letters to shareholders, both **Castle-Trethewey** and **Belleterre Quebec Mines** announced an offer from McIntyre whereby it will take over the subsidiaries for cash payments. Shareholders of both companies will meet on Dec. 3, 1959, to consider the proposal.

Here are the details:

McIntyre will assume the liabilities of Castle-Trethewey and pay $13,354,059 for all the assets of the company.

The payment represents the market value of Castle's investment portfolio as of Nov. 10, 1959, and $1,241,266 for mining properties and equipment.

Castle's holdings of 35,005 shares of McIntyre have been excluded, and along with the cash, will be distributed to shareholders if the proposal is accepted.

Distribution would give shareholders $4.93 and 1/78th of one share of McIntyre for each share of Castle. McIntyre now holds 90.43% of the outstanding Castle shares.

Shareholders of record on Nov. 30, 1959, will still receive the 15c per share dividend payable at the end of the year.

McIntyre has offered to purchase assets of Belleterre Quebec, excluding mining properties, plant and equipment, and shares of subsidiary and affiliated companies.

Purchase price would be $3,333,062 and the assumption of all liabilities, which would be distributed to shareholders on basis of $2.30 per share.

McIntyre holds 80.2% of the outstanding Belleterre shares.

The remaining assets of the company, including the Winneway power plant, would be sold as soon as possible. A final distribution would then be made and the company wound up.

TABLE ERROR

An error appeared in the table of documents necessary for Canadian business travelers abroad, p. 66, **FP**, Nov. 14. A visa is not required for a visit of less than three months in Austria.

Maclean-Hunter Buys Publications

Maclean-Hunter Publishing Co. has purchased Heavy Construction News, a weekly, and its companion annual, Heavy Construction Review.

The purchase was announced by President Floyd S. Chalmers.

J. C. Royle, manager of Civic Administration since 1951, has been appointed manager of the new publication.

Heavy Construction News will cover the field of engineering construction, from highways to major industrial plants.

What the Evidence Suggests

Quietly, and with only occasional fanfare, the cause of free trade may have gained more in 1959 than in any year since the General Agreement on Tariffs and Trade was launched in 1947.

It's true that protectionism as an international code of business ethics is far from dead. U. S. delegates may have been only partly bluffing when they used protectionist threats at the current GATT conference at Tokyo to browbeat other countries into dropping dollar import restrictions. Some European Common Market countries may be hatching ideas which bode ill for the expansion of world trade.

But these things should not be permitted to mask the solid gains of the past few months. High walls have come tumbling down.

The latest gains are the British, French and Japanese announcements that long lists of dollar import restrictions are being lifted. But these are only incidents in a story which goes back to last fall when the U. K. took the lead in the first round of dollar import relaxations, and joined other European countries in extending currency convertibility to non-residents.

Since then, scarcely a week has gone by without the removal of an important group of import bars against dollar goods. Most Commonwealth countries have followed the U. K. lead in at least two rounds of relaxations of restrictions. All principal European countries have backed up the extension of external convertibility by making concessions, some of them substantial indeed, to exporters in dollar countries.

There is ample evidence to suggest that Canadian firms who haven't pressed their overseas sales for the last year or two, would be well advised to look into the new chances.

Why the Mediocrity?

"Municipal office," the **FP** said recently, "is unattractive to many best equipped to do the job."

A letter from a successful businessman, who has served with distinction on a city council, offers an explanation of why this is so.

"Men who have the respect of the business world," he says, "will not submit to the abuse that newspapers mete out to those who offer their services at the municipal level."

The same businessmen, he adds, dislike having to go hat in hand to editors pleading to be put on newspaper slates. They also resent having their remarks "given a twist that serves the political purpose of the newspaper editor". The result is that the public has to choose among "mediocre" candidates who can "swallow their dignity and toady to newspaper direction".

It's perhaps like the question of the hen and the egg. Which comes first: the mediocrity or the journalistic abuse? Anyway, the two phenomena come one after the other; and their close connection is a point worth study by all concerned.

Bargain Butter for Britons

A new, and what may well prove to be an immensely costly, step was taken in government farm marketing last week. While Canadians were eating more margarine, Ottawa sold several million pounds of its surplus butter to Great Britain at a price reported to be far below the actual cost.

Aside altogether from possible charges of dumping and violation of GATT by competitors like New Zealand, Denmark or the Netherlands, there are almost sure to be widespread and serious repercussions on our regular and very important trade with Great Britain.

The British are shrewd traders. If they are able to buy our butter at bargain prices there's every chance that they will try for a cut rate on our wheat, our salmon or even our lumber, aluminum or uranium.

The U. K. is our biggest market for foods and a lot of other important products. It is a prosperous market, too. If we want to ruin that market, under-the-counter deals like this butter business will certainly pave the way.

Only Two Varieties

Sociological note from the taxicab industry.

"Give me retarded children every time," a Toronto cab-driver said this week. "I drive six of them to school every morning, all in the cab at once. They're no trouble, good as gold.

"I drive a lot of normal kids too," he went on, "but you have to watch them like a hawk or they'll have the meter and the radio and the windshield wiper out of order in no time. The retarded have much better manners."

Retarded or delinquent—take your choice.

Algeria's Bright Side

Published news from Algeria still tells of strife and violence. There is a pleasanter story that rarely makes headlines.

The French government is forging ahead with schemes to improve the life of Algerians, especially the Moslem majority. This is in pursuance of Gen. de Gaulle's five-year "Constantine plan," announced in October, 1958.

In the first year Algerian school enrolment increased by 100,000. One quarter of all children are now at school; the objective is two thirds. Dwellings are going up at the rate of 20,000 a year; the aim is new houses for a million people.

Free medical service has been expanded 50%. The proportion of Moslems in the civil service is up from 18% to 22%.

On 320,500 acres of land acquired by expropriation 2,500 Moslem families have been settled as owners, despite rebel threats to kill anyone who accepted this help. Investment of $63 million in new and expanded Algerian factories supplied 11,000 new jobs.

The French government is financing Algerian progress with a grant of a billion "heavy" francs ($203 million) a year. As part of France, Algeria gets the benefits of the European Common Market. When Sahara oil flows in volume, as is hoped, a large part of the royalties is to be used to improve Algerian public services.

France under de Gaulle is doing well by its African province. An independent Algeria could no doubt expect aid from the U. S., that nearly universal provider, or the United Nations—but hardly on the present scale. On every count, political, cultural and economic, it's devoutly to be hoped that a peaceful settlement will keep Algeria in close association with Metropolitan France.

Riddled With Technique

From Nova Scotia, a province that knows a lot about education, comes pungent comment on a recent **FP** editorial on teaching. Old-fashioned methods of teaching mathematics, unsuccessful a generation ago, should no longer be tolerated, we said here.

"You shouldn't run away with the idea," writes G. C. Baker, publisher of Kentville, N.S., "that techniques are causing the trouble in our educational system. After high school, the training of teachers consists in years of studying techniques, no time at all in adding to the sum of their own knowledge. The educational system is riddled with techniques.

"The real trouble is that the educational system is also riddled with the idea that by suitable technique the pain can be taken out of education. Subjects like mathematics and the sciences require the ability for logical thought, and this comes hard for most people. The various educational systems in this country have been doing their best to get around this painful fact, or to ignore it.

"In my own province the curriculum now devotes to mathematics only 60% of the time given to the subject 25 years ago. Research may unearth even more damaging changes, though it is hard to find anything more damaging than the Deweyism (the self-expressionist educational philosophy of John Dewey) that now motivates nearly all educational thinking.

"In education, as in many other facets of Canadian life, the real need is for hard work. That is why we in Canada have today the second worst educational system in the civilized world."

Well said and Amen, Mr. Baker.

My Word

Do you tend to daydream or fall asleep at conferences and committee meetings? Try the conference word-game recommended in The Economist, the paper that gave Parkinson's Law to the world.

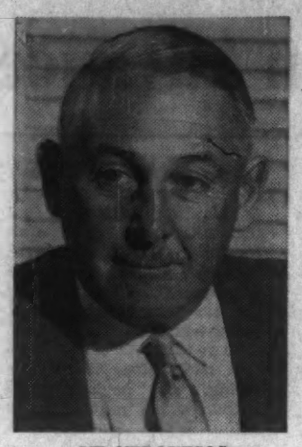
Two, or possibly three, may play. Before the meeting they agree privately on a word, preferably an unusual one. Leprechaun, gorgonzola or dulcimer would do very well. The winner is the man who first brings the word, as naturally as may be, into the conversation. He then winks at his confederate and subsides.

The Economist man was initiated with "unicorn" and rose nobly to the challenge. When someone at the meeting, not in the game, argued that economics must be made simple for the mass public, he disagreed in terms like these:

"If I were designing a coat-of-arms for our group it would show a bull rampant for we economists have been tossed on the horns of a dilemma. If we write in academic, theoretical terms, we are accused of being obscure and remote; if we use everyday language, we are tempted to over-simplify and are despised by more honest colleagues. I would prefer to have a unicorn on my coat-of-arms and to be impaled on the single horn of truth."

As this example shows, the game calls for finesse. It is said to arouse the interest and combative spirit of the most bored attender of meetings. It seems worth a try.

Post Scripts



MR NEROUTSOS

Paint Makers' Spokesman

Cyril Houlton Neroutsos has become new president of the Canadian Paint, Varnish and Lacquer Association which represents 43 major paint manufacturers.

Although Canadian paint sales will reach a record $140 million this year, capacity still exceeds demand. Manufacturers are planning to increase sales still further by a vigorous campaign of public relations and promotion.

President of International Paints (Canada) Ltd., Neroutsos is well equipped to guide the association through this period, having been in the industry for 35 years.

"Cy" Neroutsos was born in Victoria, B.C., in 1904. Educated in Victoria public and high schools, he set his sights on engineering and enrolled in 1922 at McGill University. Two years later, working as a summer trainee for Gordon & Belyea, Vancouver paint distributors, he decided "engineers were a dime a dozen" and went into the paint business.

He spent two years as a laboratory apprentice at the London headquarters of the huge International Paints combine, returned to Canada as assistant works manager at International Paints' Montreal plant.

A long-time member of the militia, Neroutsos went overseas as a major in June, 1941, with the Three Rivers Regiment and shortly after Dieppe took command of the Calgary Regiment. In December 1943 he was awarded the Distinguished Service Order for gallantry at San Leonardo.

Returning to Canada in December 1944, after suffering a knee injury, he rejoined International Paints and in 1945 was appointed sales manager. He became executive vice-president in 1952, vice-president and managing director in 1954 and president in 1956.

Neroutsos is married and lives in the Town of Mount Royal, Que. He has three sons — George, a paratrooper in the U. S. Army in Germany; John, a TCA flight test engineer and co-pilot; and Philip, a final year dentistry student at McGill University.

His hobby is bird watching. He is a member of the St. James Club, Forest and Stream Club and is a fraternity brother of Delta Upsilon.

• • •

Urban Rights

New president of Union of Alberta Municipalities, a powerful organization representing the provinces' 191 communities, is Dr. F. M. "Mac" Smith of Camrose, about 50 miles southeast of Edmonton.

A Camrose native, Dr. Smith has served six terms as councillor and alderman and has watched his birthplace grow from town to city status since 1955.

Aware that Alberta's population is fast becoming an urban one, Smith notes that, to considerable extent, the urban dweller is paying a heavy load of taxes.

"In my capacity as president," he says, "I propose to keep that fact to the fore in dealings with the provincial government in the coming year."

Dr. Smith obtained his primary and secondary education in Camrose. In 1935 he entered the University of Alberta, graduating in medicine. During the summers, he worked with survey crews for a railroad and pitched in with the harvesting.

Following his graduation, Dr. Smith did postgraduate work at the College of Surgery in Edinburgh, Scotland.

He returned to Camrose to join Dr. F. M. Smith, his brother. The two organized the Smith Clinic of which Dr. "Mac" Smith is a partner. The clinic now has ten doctors.

In addition Dr. Smith is a director of four other enterprises. These include the Smith Clinic Building Ltd., which is presently building a shopping centre in Camrose; Smith Rentals (Camrose) Ltd.; Central Garage, Camrose; and Hills Ranch & Co.

Dr. Smith married the former Irene Thibaudeau of Macklin, Saskatchewan.

He has taken an active interest in all community affairs and has been a member of the Camrose Chamber of Commerce and other civic groups for a number of years.

DR. SMITH

MR. ANSON

Steel Maker

Clement Matthew Anson is new vice-president and general manager of steel operations for Dominion Steel and Coal Corp.

Anson, who started his career as a laborer at the Sydney steel plant, previously was vice-president of Dosco's Sydney works, the Dominion Iron and Steel Corp.

The promotion extends Anson's management responsibility by placing Dosco's steel operations at Sydney, Saint John, Montreal and Toronto under his supervision.

Born in Rotherham, England, Sept. 9, 1901, Clem Anson is a descendant of a long line of steelmakers. His grandfather and his father built blast furnaces in England, India and the United States.

After graduating from McGill University in 1925 with a BSc degree in metallurgy, Anson went to Sydney and worked as a laborer in many sections of the big Maritime steel plant.

Within three years he became assistant general superintendent. From that point, he climbed steadily in the Dosco empire.

In 1950 he became the first steel engineer to receive the Julian C. Smith Award from the Engineering Institute of Canada for outstanding contributions to Canadian development. He is a past president of the Institute.

In 1958 he received an honorary degree from the Nova Scotia Technical College.

Keenly interested in community affairs, Anson is actively associated with many projects. He is president of the Protestant Home for the Aged in Sydney, a governor of the Nova Scotia Research Foundation and a governor of Nova Scotia Technical College.

He is married to the former Dorothy O'Neil, of Sydney. The Anson's have one daughter, Josephine, a physiotherapist at the Sydney City Hospital and a son, David, a student at St. Francis Xavier University, Antigonish, N.S.

What Others Are Saying

Unwanted

Edmonton Journal

The kindest comment that can be made on CCF House Leader Hazen Argue's Edmonton speech is that he seems to have been paying very little attention to the soul-searching and agonizing reappraisal going on in the socialist British Labor party following its decisive defeat in the recent general election. The political development that Mr. Argue advocates for Canada is exactly what the British voters, knowing full well what it means, emphatically rejected in the interests of their progress and prosperity.

Mr. Khrushchov and Mr. Argue may believe that our grandchildren will all live under socialism but the Canadian people have demonstrated many times at elections that they don't. The political issues raised by Mr. Argue are as phony as a three-dollar bill.

WEEKLY NEWSPAPERS at their recent British Columbia convention were told that they were unpopular. Comments the **Vancouver Sun:** "Weekly editors know they're unpopular with someone every day the paper comes out. If they're not they're failing in their job; to report all the news fairly, accurately, honestly; to comment on it intelligently, fearlessly, in what they think is good and worthy of public interest."

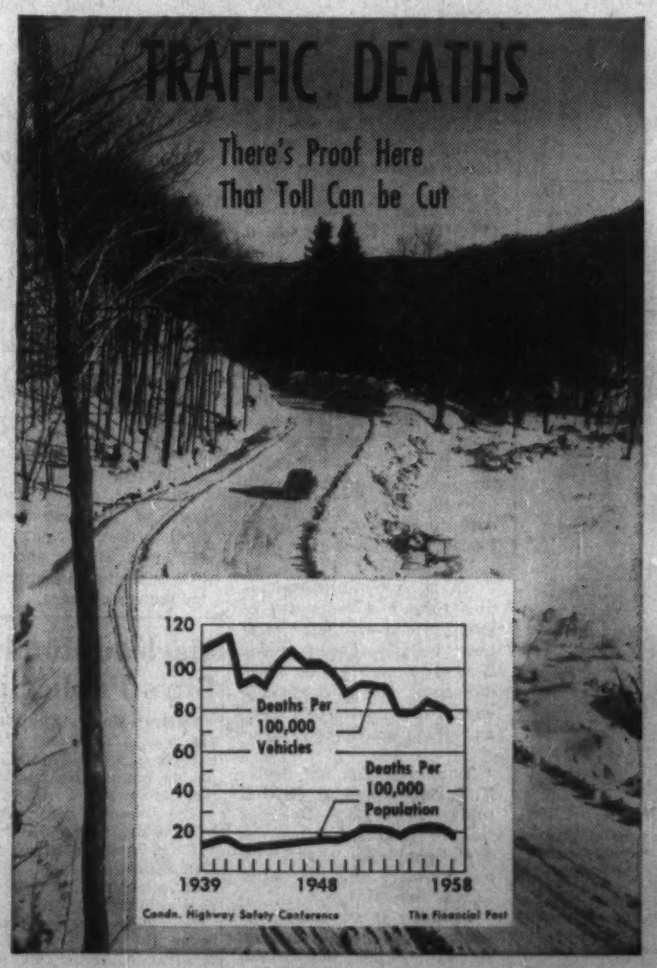
WHAT HAVE WE DONE to make history more than a chore for our school children? asks the **Ottawa Journal** "With all our airplanes and wealth and eagerness to have Canadians love their own land there ought to be more than television programs, sponsored by soap, to inform and inspire our children with the proud history they have inherited. There should be visits and explanation and the growth of pride in a nation."

U. S. ACTION regarding imports of uranium, declares the **Windsor Star,** "is another example of one of our basic export difficulties. The United States is eager for our raw materials when its home supplies are insufficient. When these become sufficient, it is apt to cut off imports from Canada."

THERE ARE TIMES, mourns the **Ottawa Journal,** "when we are driven to conclude that in trade matters, and indeed in other matters, we Canadians are all too prone to blame others for our difficulties — or too prone to expect others to resolve our difficulties. It is an attitude which, unrealistic and illogical, has a cry-baby tinge to it, and certainly mocks our often vociferous claim that, come what may, we must be independent politically and economically."

THE PROPOSAL to establish a Maritime tourist promotion bureau in Central Canada is warmly approved by the **Cape Breton Post.** "There is as much to satisfy it as justified the action of the four Atlantic provincial governments in opening a joint office in London last year."

IN SOME COUNTRIES, news that the wheat crop would be the largest since 1956 would be cheering news but in Canada this announcement is greeted with mixed emotions, declares the **Windsor Daily Star.** "Just where and how this country is going to s 'l its wheat is going to cause plenty of worry. Carryover crops from other years are still bulging elevators. And other countries, especially the U. S., have surplus yields too."



Scratch Pad

RETURNING TO TORONTO after an absence of but seven months, I was staggered by the changes which have occurred in that relatively brief period. The tearing down of once familiar buildings; the rushing up of new tall and glittering edifices. The stepped up bustle on the downtown streets and the variety of languages heard everywhere. The mushroom growth of factories and shopping areas in what was almost countryside a year ago. All of it somewhat bewildering.

It is a city so obviously prosperous and traveling at so rapid a pace that I am a trifle worried about the effect it is having on a number of my business friends. They are looking a bit tired and worn. Their wives are concerned. In every case the reason given is the same — too much pressure.

I find the same tenseness in hotels. I don't find the same sort of courtesy and helpfulness that is experienced in Montreal and Ottawa, where the majority of the employees are French Canadians. Rushed living is contagious.

• • •

THERE IS ONE RESPECT in which you cannot rush in Toronto — motoring. Compared with London and the big cities of Europe, traffic seems to have got completely out of hand.

The biggest concentration of city motor traffic I had encountered in a summer's traveling was in London during the International Motor Show at Earls Court. It was terrific, but beautifully handled by the police. There were diversions around the area; one-way movement on normally two-way streets; no turns that would impede a steady flow; plenty of plain directing signs to guide the motorist. As a result, one made astonishingly good time.

In Toronto, on the drenching Saturday morning of the Eaton Santa Claus parade, after half an hour's wait at an uptown hotel I finally got into a taxi to go north. Such was the jam that in one block the meter ticked up 90 cents without the cab moving an inch. There wasn't any apparent traffic control pattern. Admittedly it was an exceptional morning, but it wasn't unexpected.

Even on ordinary days getting anywhere during Toronto's rush hours is a frustrating experience. It is getting people down. Like the taxi driver who, in a broad Scottish accent, said, "I've had a year of this, and, mon, I canna stand it any longer. I'm going back to Glasgow."

• • •

I LIKED THE LITTLE, white-haired old lady who descended with me in the hotel elevator. We were joined by a group of Western University cheer leaders; bright-looking young maidens clad for much milder and drier weather than that prevailing. Looking at their brief skirts and bare legs, the old lady enquired, "And what game are you going to play, my dears?" One of the girls replied, "Football. But we don't play. We're cheerleaders."

"How nice," purred the old lady. "I do hope you'll all have a good hot bath when you get through playing."

• • •

IN OTTAWA, to Little Wings, home of Yousuf and Solange Karsh. Situated on the Prescott Highway, overlooking the Rideau River, it is a charming home. The Karshes have made their grounds a bird sanctuary and the woods were alive with feathered migrants pausing on their way south. Unfortunately, Yousuf was out of town, but Solange showed us proofs of pages from his new book of Portraits of Greatness. There's a picture of the aging, weary but indomitable Churchill that is a triumphant study, and Yousuf's own descriptive caption is a moving gem of prose.

Stop Me If . . .

The first morning after the honeymoon, the husband got up early, went down to the kitchen and brought his wife her breakfast in bed. Naturally, she was delighted. Then her husband spoke: "Have you noticed just what I have done?"

"Of course, dear; every single detail."

"Good. That's the way I want my breakfast served every morning after this."

• • •

The prospective employer was interviewing an applicant for a stenographic job.

"—and you thoroughly understand the importance of good punctuation?" he asked.

"Oh yes," said the young lady, "at my last place I always got there on time!"

• • •

Freshman: "Dad, you're a lucky man."

Father: "How's that?"

Freshman: "I won't need new books this term. I'm taking the same courses over again.

• • •

Two tramps were sitting on a bench in the park when one remarked:

"I'm a man who never took advice from anybody."

"Shake," said his companion. "I'm a man who took advice from everybody."

Canada Can Burn These Hellish Camps

Credit to the human race, if we end refugees' terrible agony . . .

By J. B. McGEACHY

CANADIANS are being asked to lend a hand to some of the saddest and most helpless people in the world, the refugees still living wretched, frightened lives in a dozen countries. Many thousands of them are children actually born stateless in the terrible refugee camps.

There are two good things Canada can do. One is to receive some of the homeless Europeans as immigrants. The second is to subscribe to funds that will feed, clothe, shelter, treat medically and perhaps educate other refugees, mainly non-European, who will inevitably stay where they are or nearby.

Rich in money, living space and opportunities, Canada can be generous in both ways. To date our official response to the cry for help has been kind but not excessively so. An active voluntary committee, with Governor-General Vanier as patron, has been formed by 40 welfare agencies.

The occasion for the current appeal is World Refugee Year (WRY), proclaimed by the United Nations in Dec., 1958. It runs from last June to June, 1960.

The idea originated in Britain when four young men (Chris Chataway, the famous mile runner, and three journalists) together wrote an angry article for a magazine.

They noted that scientists of many lands had worked together, during International Geophysical Year or IGY, in a study of things like climate, earthquakes and ocean currents. Why not follow this fine example, they asked, and start a twelve-month, international humanitarian effort to cope with the refugee question?

"Humanitarian" is the right word. Since refugees, with neither votes nor money, cannot form pressure groups, helping them is always an unforced, voluntary act of brotherly love and Christian charity. It will be a credit to the human race, in this brutal and horrific age, if WRY can succeed.

UN's permanent agency for refugees, under Dr. Auguste Lindt, has named a special WRY staff; and Peter Casson, with the UN since 1952 and a man of wide international experience, is in Canada now to inform and stimulate. He has already crossed our country, finding sympathetic interest everywhere, and will stay till next spring. A robust, genial Englishman of 40, Mr. Casson had a Canadian father, the writer Herbert N. Casson.

The word "refugee", I learned from him, has been officially defined. A refugee is outside his own country, has lost its protection and cannot, or will not, return to it because of a "well-founded fear" that if he did he would be persecuted for his race, religion or political views. He is a man without a country. He is also a man without a passport, which is almost as bad as lacking arms and legs in bureaucratic 1959.

Incredible though it seems, there are nearly 40,000,000 people who might be, by stretching the word, so classified.

Long ago, when tribes and states fought for choice bits of earth, wars always displaced hordes of people. Then humanity settled down and for centuries nations normally stayed put, and remained more or less intact, during and after wars.

Now civilized man has reverted, in his belligerent practices anyway, to the Dark Ages. Whole populations may be exterminated or driven across borders in present-day wars.

Fortunately the UN refugee organization need not concern itself with all of the 40,000,000 survivors of recent forced migrations. Some are no longer truly refugees.

For example, in the welter of mass flight and slaughter after Britain left India in 1947, about 15,000,000 Hindus and Moslems ended up outside their homelands as defined by new frontiers; but they have been accepted as citizens and workers in Pakistan and the new India. The same is true of 13,400,000 expellees and refugees, people of Germanic birth or origin, who have flocked from Eastern Europe into West Germany since 1945.

WRY's business is with smaller concentrations of refugees in the Middle East, North Africa, Hong Kong, Western Europe and China.

There is no question of overseas migration for the first three of these groups:

—1,000,000 Palestinian Arabs, mainly in Jordan and the Gaza strip, huddled on the borders of Israel and still hoping, no doubt vainly, to return to that country;

—180,000 Algerians in Tunisia and Morocco, relatives of fighting rebels, nearly all women, children and old men, who will eventually go back, it's hoped, to Algeria;

—1,000,000 Chinese in the British island-colony of Hong Kong, living overcrowded in frightful squalor, the prey of fire, disease and starvation, but nevertheless likely to be permanent residents of Hong Kong.

For all these refugees what is mainly needed is material aid; but the Arabs can also use schools, technical and academic.

It will probably take a political settlement to get all the distressed Palestinian exiles re-settled somewhere in the Middle East. Meanwhile many of the younger ones have bravely accepted the facts, learned trades and quitted the miserable border encampments for jobs and a new life elsewhere. It's hoped that during WRY, with evangelism and education combined, more of them can be persuaded and helped to make a move.

This leaves, on the WRY list, two widely separated groups of refugees who would migrate, preferably far away, if given a chance.

There are 10,000 White Russians in China, mostly farmers in the Shanghai area. These are European, white Caucasian, folk. The older ones fled from Russia's Communist revolution in 1917, the younger are their descendants.

Now, since the Chinese Red victory of 1949, their known anti-Communism puts them in grave danger of trouble with the Peking authorities. They are still permitted to leave China, but they don't know how long this freedom will last.

To get up and go is for them no easy trick. They need money for tickets and British transit visas through Hong Kong, the latter readily obtained if there's a promise of entry at some overseas port.

Australia, Britain, France and Brazil are taking some of the White Russians; but Canada, so far, has demurred. This is beyond me. There's no reason that I can see why this country should not sponsor 100, maybe 250, White Russian families. Aside from humane considerations, everyone should know by this time that some Russians are very talented people.

In Western Europe there are still 135,000 unsettled refugees; and to Canadians their story may be the most poignant of all because they are blood-brothers of some of us and hapless victims of a war we remember. Many, of course, are Poles, Czechs and of other East European nationalities. (This is why the Communist states voted against WRY; they deny that the problem exists.)

Some of the worst off among the Europeans are the 32,000 who have lived for 14 years, or been born, in refugee camps in Austria, West Germany, Italy and Greece. These camps are shabby, cheerless places, offering no privacy for family or personal life, little but the bare minimum of subsistence and of course no chance to earn.

Time and again since 1945 the camps have been inspected by "selection missions" from countries looking for acceptable immigrants. The visitors (not from lack of feeling, it's their job) mull and pick over the inmates rather like a housewife rummaging in the grocer's barrel of apples. They will take that able-bodied youth who would make a good road-builder or that pretty girl for a maid, but they always leave many behind.

I have talked with a few who went through this valley of humiliation and writhed inwardly as they were checked over, like dogs in a pound hoping to be chosen. It's a story to make strong men cringe and weep.

But why, it may be asked, don't these refugees find work and become citizens where they are? Millions have done so and UN encourages others to follow suit. But the odds are now heavily against success in this venture because there's a limit to what the "countries of first asylum", as they are called, can be expected to do.

Italy and Greece have severe, chronic unemployment among their own people. It has been a strain on West Germany, to accept and look after 13,400,000 refugees in 14 years. Austria, about the size of New Brunswick, was nearly swamped when 180,000 fleeing Hungarians arrived in 1956. The Austrians found room for many of them but still have thousands unplaced.

It is just not feasible for any considerable number of refugees to secure naturalization or a job in the European countries giving them a temporary haven.

Another fact to be faced is that not all the refugees still in camps, after 14 years of selection and rejection, are the fittest physically or perhaps, on a superficial view, the most prepossessing. Some are lame or otherwise handicapped. Others, not surprisingly in their environment, are tubercular. Some are just old.

What should move us to sympathy and action is that all of them are unhappy, frustrated and eager for a chance to make a life somewhere else; and their bad luck so far proves nothing about their possible value. Potential weight-lifting champions and Miss Canada's don't necessarily make the best immigrants.

But the receiving countries in the philanthropic WRY venture won't be, or should not be, looking first for their own advantage. What benefit they derive from it will be a bonus for virtue. To rescue a person or family from a camp, or from the status of vagrant refugee, is a good action and therefore an end in itself.

One explicit aim of WRY is to burn down the European camps, wipe them off the face of the earth, by the end of 1960; and Canadian cities across the land, Mr. Casson tells me, are "adopting" camps with the deliberate purpose of emptying and destroying them. The cost will run from $40,000 to $400,000 and more, each city taking on a load suitable to its size.

Money gifts are asked for; and it's possible for any Canadian individual, family or society, like a church group, to volunteer to bring refugees to this country and look after them. For people so sponsored, Immigration Minister Fairclough has announced, the government will waive the usual rules restricting admission. This was a humane decision by Ottawa; but it's important to note that sponsorship, which includes not only paying fares but providing for the refugees until they become self-supporting, can be fairly expensive.

For its own part the government is bringing in 100 tubercular refugees and their families, possibly about 400 people in all. They are expected before Christmas. There are plenty of vacant sanatoria beds in the country; and each TB sufferer will be placed in one of them. If he happens to be the earner, his dependents will be looked after until he is cured, released and employed. Total cost is estimated at $750,000.

This official scheme is good so far as it goes but it's nothing extraordinary. New Zealand was well ahead of Canada with the same idea. Crowded Britain, which has received 250,000 refugees since the war, is sponsoring 200 tuberculars. Equally small and crowded Belgium will look after 1,000 refugees in all, including invalids. Sweden, along with other Scandinavian countries, has for years had a fixed policy of financing ill and handicaped refugees, including TB patients, and will sponsor 1,000 during WRY.

Canada, with a fine record of hospitality to the Hungarians three years ago, could do more officially in World Refugee Year than Ottawa seems disposed, up till now, to do. Public opinion could sway the government; and I think that the Canadian public would wish to see our country earn honor and renown for friendliness to persecuted, homeless people.

Miss Muriel Jacobson, at 113 St. George Street, Toronto, WA 1-9212, is national director of the Canadian committee for WRY.

J. B. McGEACHY

"One aim of World Refugee Year is to burn down the European camps, wipe them off the face of the earth, by the end of 1960; and Canadian cities are 'adopting' camps with the deliberate purpose of emptying and destroying them."

B.C. Gas Field Tied into System

A new British Columbia gas area, 50 mi. northwest of Fort St. John, has now been connected to the **Westcoast Transmission Co.** pipeline.

The Jedney-Bubbles gas field developed this year by **Pacific Petroleums Ltd.** has now been tied into the transmission system with completion of the 25-mi. extension to the existing Westcoast gathering system.

Initial deliveries into the new system totaled 12 million cu. ft. daily.

This will increase to an estimated 50 million cu. ft. by the end of the month.

An active drilling program is currently being carried on in the area, with five wells either drilling or being completed.

It is expected that 13 wells, including three dual zone producers, will be connected to the system by the end of this month.

Robert Harding, right, assistant chief engineer of Arma division, American Bosch Arma Corporation, points out to Frank McShane, cost-improvement expert, the high quality and contrast of an 11"x17" stock print reduced from an original 22"x34" drawing. The print is a sample of many run off on an offset duplicator from an inexpensive offset paper master prepared xerographically by XeroX Model 1218 copying equipment.

ARMA SAVES $82,000 YEARLY

. . . reproducing

- *engineering drawings*
- *drawing-change notices*
- *specifications sheets*
- *parts lists*

Arma Division, American Bosch Arma Corporation, is saving $82,000 a year in the rapid reproduction of engineering drawings, drawing-change notices, specification sheets, and parts lists. Arma manufactures midget brains for missiles and other intricate electronic devices.

The $82,000 economy results from the installation of XeroX Model 1218 copying equipment and offset duplicating to supplant conventional drawing-reproduction methods.

XeroX Model 1218 copying equipment, operating on the principles of xerography—clean, fast, dry, electrostatic—prepares inexpensive offset paper masters from original engineering drawings of A to D size.

At Arma the larger drawings are reduced with fine legibility to 12"x18" masters*, from which multiple prints are quickly run off on offset duplicators.

The quality of copies is superb. Yet, prints cost so little that engineers are encouraged to discard them after use, rather than re-file them.

Drawing-change notices now reach production lines and suppliers faster than ever before.

An Arma engineering library of expendable drawings provides prints, run off in advance of actual need, for engineers' self-service availability.

Xerography can help *you*, too. Write for proof-of-performance folders showing how companies of all kinds and sizes are speeding paperwork duplicating and saving thousands of dollars yearly by xerography.

NEXT YEAR

U.S. Will Throw Stiff Competition At Our Farmers

From Our Own Correspondent

WASHINGTON, D.C. — Crystal ball gazing by U.S. farm economists shows Canadian farmers will have stiffer competition next year from U.S. farmers, both in world markets and in the U.S. market.

There likely will be a more intense sales effort to move heavily subsidized farm exports.

Production will be up and prices down for cattle and hogs, two items that have been bringing tens of millions of dollars annually in recent years to Canadian farmers.

Thus, Canadian cattle and hog exports to the U.S. may run into trouble both from lower prices and from the growing demands for import restrictions against them.

U.S. production of wheat will probably increase again next year, while dollar exports will drop, adding more woe to the U.S. wheat surplus miseries and increasing pressure for "bigger and better" cut-rate surplus deals.

The U.S. surplus of feed grains is expected to mount next year into an oversupply problem of serious proportions.

An intense campaign to move this corn, oats, barley and sorghum grain into world markets will be launched and may hurt Canadian exports of some of these products, especially in our big oats and barley market in Europe.

The U.S. government farm economists figure the U.S. surplus headache is going to get worse.

Today, the U.S. has a carryover of 1.5 billion bu. of corn. A year from now it will have 2.4 billion bu. of wheat, 50 million bu. more than last year.

Next year, the carryover is expected to be increased by about 170 million bu. Better-than-average weather and yields could make this surplus problem even worse.

One small ray of hope has been noted, however, in the predictions that the cattle and hog situation may not be as bad a year from now as had been feared earlier.

While production will be up and prices will slide, they may not slide as far as had been expected.

This means that while Canadian cattle and hog exports to the U.S. face lower prices and the threat of restrictions, neither the lowness nor the degree of the threat will be as bad as was earlier forecast.

Hogs have an additional problem, however, because Canadian exports face the extra threat of U.S. import restrictions being imposed due to Washington's dislike of the deficiency payments scheme for hogs scheduled to start in January in Canada.

Washington fears this means more Canadian exports and if Canada does not voluntarily restrict shipments to the U.S., the Department of Agriculture will demand and probably get import restrictions on Canadian hogs.

The U.S. agricultural salesmen demanded at the recent annual Agricultural Outlook conference that other countries remove their restrictions against U.S. farm products.

"We must make substantial further progress in erasing these restrictions in order to permit our agriculture to share fully in the world's improved trade possibilities," said Clarence L. Miller, Assistant Secretary for Marketing and Foreign Agriculture.

When the shoe is put on the other foot, however, there was no thought whatever to a lifting of U.S. farm import restrictions as embodied in Section 22 of the Agricultural Adjustment Act.

This has hit, among other things, Canadian exports of cheese to the U.S.

During 1960 about $1.5 billion worth of U.S. surpluses will be sold for foreign currencies instead of dollars.

Another $300 million will be given away and it is expected close to $300 million will be bartered if the recent pace is maintained.

On top of this subsidization of U.S. farm exports in the coming year, will be the dollar sales aided by straight subsidies from the Treasury as in the competitive big deals.

The Outlook

(CONTINUED FROM P. 1)

in the later stages of the 1955-57 boom was responsible for pushing the entire economy on to rapid growth.

Only 33% of all firms will be spending more on new facilities in 1960; 35% expect to spend about the same; 27% will be spending less.

This comes after a more definite upswing in such spending in 1959: Late in 1958, the FP sample predicted that capital expenditures would rise in 1959 in 43% of all companies—and they did in 42%.

* * *

The 1959 FP survey again scored heavily in accuracy when predicting sales. A year ago 73% of all companies forecast higher sales during the full year 1959—it's now expected that on results so far, sales will indeed be up in 73% of companies.

Even profit expectations of a year ago came close to being realized. A year ago, some 56% of all firms looked for higher profits after taxes in 1959; 28% expected little change; 12% anticipated a decrease.

The probable result when everything is tallied up for this year: Profit increases in 47%; no change in 19%; decreases in 24%. Higher tax rates, introduced in the spring budget, undoubtedly contributed to the less favorable showing.

* * *

After the mid-cycle doldrums in business activity this summer, the FP survey's prediction that sales next year will be up in 70% of all firms seems highly optimistic.

But indications that a sturdy fall pickup is under way have been appearing during the past week. For example:

- **Industrial output** in September climbed to a record for a 2.3% gain during the month, seasonal factors considered.
- **Manufacturers' shipments** in the same month were up by a healthy 4.4%.
- **Retail sales** in September turned in a 5.8% year-to-year gain—a gain well above the average advance made during the third quarter or during the whole first nine-month period.
- **October's commodity exports** climbed to $471.9 million for a 3.6% advance.
- **Employment during October** fell less than seasonally with the result that only 3.8% of the labor force was unemployed as against 5.1% a year earlier.

* * *

Comments on business prospects made this week by three prominent Canadians:

▸ **John S. Proctor, president, Imperial Bank of Canada**—"What is needed now is a means of greater promptness in adjusting government budgets during a boom to put a curb on inflation pressures. . . . A balanced or surplus budget would contribute greatly to controlling total expenditure and making more funds available for private borrowing."

▸ **O. J. Firestone, Department of Trade and Commerce**—"New expansionary forces are gathering and will not only see Canada through 1960 but will carry her through 1961. In 1960 exports to the U. S. should rise moderately and more significant increases can be anticipated in exports to Western Europe and other overseas countries."

▸ **John Davis, B.C. Electric's director of research and planning**—"The gradual recovery that began in the summer of 1958 should gather momentum in 1960. There will be a higher volume of employment, higher levels of income, greater dollar value of retail sales than ever before.

"Forest industries should be able to sell more of their output to the U. S., the market for many metals is firming, pulp and paper production should rise by 5%."

Canada Selling Aluminum To Red China

(CONTINUED FROM P. 1)

than 5,000 tons of Canadian aluminum this year.

Exports to India remain at about the 12,000-ton yearly level. Aluminium Ltd.'s investment in expanded Indian capacity continues.

It's understood shipments to Australia will once again be at about 16,000 tons.

Apart from primary metal, world demand for semi-fabricated metal is exceptionally strong and deliveries stretched out. Price competition reportedly remains keen.

Aluminium Ltd.'s subsidiary, **Northern Aluminium Co. of Britain**—a large fabricator—is having one of its biggest export years with sales of sheet products to West and East Africa, Central America, the Caribbean and the Middle East showing considerable growth.

Presidents Read It . . . and So Do Men Who Want to Be Presidents

A word about The Wall Street Journal

A recent survey shows that many Wall Street Journal subscribers have been promoted.

Some were made vice presidents. Some became sales managers.

Some were made general managers. And some have become presidents of their companies.

We do not claim credit for the success of our readers, but we do feel that the knowledge they absorb from The Wall Street Journal helps to fit them for bigger jobs.

Because the reports in The Wall Street Journal come to you daily, you get quick warning of any new trend that may affect your income. You get the facts in time to protect your interests or seize a profit. The Journal is a wonderful aid to salaried men making $7,500 to $25,000 a year. It is valuable to owners of small business concerns. It can be of priceless benefit to ambitious young men.

The Wall Street Journal is the complete business DAILY. Has largest staff of writers on business and finance. The only business paper served by all three big press associations. It costs $24 a year, but you can get a Trial Subscription for three months for $7. Just tear out this ad and attach cheque for $7 and mail. Or tell us to bill you.

Airlines May Pool Services

(CONTINUED FROM P. 1)

the announcement that all overhaul work on CPA's Conway jet engines will be done at TCA's new $23 million base in Montreal. Discussions are now under way between the two lines. TCA describes it as a "straight business deal". It is felt there is no point in establishing a second ultra-expensive Conway overhaul base in Canada.

"I have felt for a long time that Canada would only have one major airline 10 years from now," one experienced airline executive told FP. "The only question is will it be owned by the taxpayers or Canadian Pacific shareholders."

Betting in Canadian aviation circles is that Hees will have a hard time getting TCA's Gordon McGregor and CPA's Grant McConachie into a friendly and co-operative business venture.

But in recent months the minister has shown little reluctance to initiate sweeping change.

London, Ont., Shop Project 90% Leased

Over 90% of rentable space in the Wellington Square project in downtown London, Ont., has been leased, according to **Webb & Knapp (Canada) Ltd.**, developer of the $10 million project.

Key tenant is **Eaton's of Canada**, which alone occupies nearly 250,000 sq. ft. on five floors. Other major tenants: **Dominion Stores Ltd.**, and **Woolworth Co.**

"Throughout our leasing program," says R. Tinsley, leasing officer for Webb & Knapp (Canada), "we have sought to achieve for Wellington Square a 'strong fashion identity'—with emphasis on ladies', men's and children's wear."

Tenants include:

Burrough's Furniture Co.; Royal Bank of Canada; Reitman's (Ontario) Ltd.; Agnew-Surpass Shoe Stores Ltd.; Grafton & Co.; Allen Stores Ltd.; Callyer Shoes Ltd.; Hay Stationery Ltd.; Virginia Dare Ltd.; McKittrick's Ltd.; Hatland; United Cigar Stores Ltd.; Cook Shoes (London) Ltd.; G. Tamblyn Ltd.; Clark Shoes Ltd.; Laura Secord Candy Shops Ltd.; Regal Patisserie; W. C. Young Co.

Leasing program is running well ahead of schedule, Tinsley said. Space for air-conditioned offices and service shops is also being made available in a Wellington Square concourse.

With the exception of the Dominion supermarket at the corner of Wellington and York Sts., and integrated with the centre, all stores including Eaton's are entered from a centrally-heated and air-conditioned mall.

ANNOUNCEMENT

ARBORITE EXPANSION IN THE UNITED KINGDOM

JOHN GREENHALGH

D. S. Abbott, president of Howard Smith and subsidiary companies announces the appointment of John Greenhalgh as manager of an Arborite subsidiary now being formed to market Arborite products in the United Kingdom. The new company will be located in London, England, and will act as a central distribution point to serve the growing demands there.

Mr. Greenhalgh is a native of Lancashire and following 20 years service in the R.A.F. retired with the rank of Group Captain and joined the firm of Carreras Ltd. of London. Later he was transferred to the Rock City Tobacco Company in Quebec City where he served six years as general manager before joining the Arborite Company.

'Water Steal' Drive Rolling Again in U.S.

From Our Own Correspondent

WASHINGTON, D.C.—A new "Chicago water steal" campaign is being readied for the coming session of the U. S. Congress.

The bill proposing this diversion of an extra 1,000 cu. ft. sec. out of Lake Michigan now is in the hands of the Senate Foreign Relations Committee.

The House already has okayed the measure, and Illinois Congressmen plan to pressure the Foreign Relations Committee into an early hearing next year on the "water steal".

The diversion of the Lake Michigan water to improve the Chicago sanitary system would lower the levels of the Great Lakes, thereby raising shipping costs because of necessary lighter loading, lessening the value of the St. Lawrence Seaway, and resulting in considerable lost power potential.

The bill was stalled by a last-minute filibuster in the Senate during the 1959 session of Congress and shunted to the Foreign Relations Committee.

There likely will be hearings in late January or early February by the Committee.

While this new "water steal" drive is being prepared, there is action elsewhere on the water diversion front.

The Supreme Court-appointed Master who is hearing the whole diversion proposal has restarted his Chicago hearings. He has two specific cases before him:

- **The first is the effort** by other Great Lakes states to force the Chicago Sanitary District to return to the lake the 1,500 cu. ft. sec. of Lake Michigan water that it now takes.
- **The second case involves** the request from three Chicago suburbs that want to divert water out of Lake Michigan for their own use. This diversion is relatively small.

Judge Albert B. Maris of the U. S. Court of Appeals in Philadelphia is the Master hearing the case in Chicago.

He held hearings in October, primarily considering the case of the Chicago suburbs that want to take the water, but do not want to return it to Lake Michigan.

It may be as long as one year before he hands down his decision.

The opponents of the "water steal" say the legislation before the Congress should wait until Judge Maris makes his recommendations.

The Chicago supporters, however, want to go ahead at once.

The whole case will be discussed in Milwaukee on Jan. 5 by the U. S. Great Lakes Commission.

Chicago recently announced a five-year public improvements program costing $751 million, but not including any money to expand the sewage disposal facilities.

The Chicago Sanitary District apparently still hopes either Congress or the Supreme Court, or both, will be on its side in this issue.

If the "water steal" bill does not pass the Senate this year or if it does but is vetoed by the President, the Chicago supporters will have to start all over again with the new Congress in 1961.

Manitoba Farm Losses $25 Million

From Our Own Correspondent

WINNIPEG — Farm losses in Manitoba for the 1959 crop year are now estimated at $25 million.

With the 1959-60 winter set for keeps, the provincial department of agriculture estimates this is the minimum.

Farmers hardest hit individually are growers of root crops.

From 25% to 30% of the sugar beet crop and half the commercial potato crop was trapped in the frozen ground.

Estimated loss to beet growers: $1 million. Loss of sugar output at plant of **Manitoba Sugar Co.**: $1.5 million.

Losses for 276 potato growers who had 11,000 acres of plantings are estimated at $1¼ million.

Market gardeners lost a lot of root vegetables. They expected a crop of 1,500 tons of carrots and 500 tons of parsnips. Less than 40% was saved.

Biggest money loss was grain. Prospects of salvaging what is left in the fields even with favorable weather next spring are slim.

East of the Red River there is thought to be no chance at all.

On the main grains the department estimates based on reports of agricultural representatives are:

- **Wheat** — About 10% of the estimated 60 million bu. crop is unthreshed. Probable loss: $6 million.
- **Flax** — Only half the crop harvested. Estimated crop was 5.8 million bu. and with half of it beyond saving and flax at $3 a bushel, probable loss $8.7 million.
- **Oats** — Estimated loss $4.5 million.
- **Barley** — 16% still in the fields in swath or standing. About 5.6 million bu. lost; value, if it could have been marketed, $4.5 million.

Minority C&D Still Fighting

MONTREAL (Staff)—A committee of dissident **Canada & Dominion Sugar Co.** shareholders, apparently having failed to prevent takeover of the company by U. K.'s **Tate & Lyle,** says it is now trying to improve prospects facing C & D minority shareholders.

At mid-week, Eric Reford, shipping company executive, and lawyer Guy Drummond — who head the committee — were soliciting proxies for the special meeting of C & D shareholders scheduled for Chatham, Ont., Dec. 4.

In a letter to some C & D shareholders who supported requisitioning of this special meeting, Reford this week said the committee would continue to press for a full explanation of circumstances surrounding the Tate & Lyle takeover offer, its acceptance and approval by company directors.

"The purpose of the meeting is to obtain answers to the questions raised in the requisition and referred to in the notice of the meeting.

"All these questions go to the heart of the matter and we hope that the information we receive will lead to constructive action to protect our interests, now and in the future," Reford says.

Drummond is a substantial shareholder in C & D. The Drummond family has been closely connected with the company since founding of the **Redpath** refinery in 1854.

Great for cigars and cigarettes, too, when held upright.

Your Pipe's Best Friend! The one-and-only, patented BEATTIE JET LIGHTER is designed for greatest pipe-smoking enjoyment. St. John's Shops Shift Furniture

From Our Own Correspondent

ST. JOHN'S — What's happening to the furniture business in St. John's?

Steers Ltd. opened a new store four years ago to sell furniture, carpets, lamps and electrical appliances. Now it is renting its premises to **Simpsons-Sears Ltd.**

Simpsons-Sears has a small two-story outlet in the east end of St. John's, plans to open the second shop early in the new year.

Stop & Shop Supermarket is going out of the furniture business and will enlarge its food market.

Three miles from St. John's on the main highway around Conception Bay, Stop & Shop originally was a furniture and appliance store. After a fire the business was re-established as a food and furniture combination.

Newfoundland Woods Unions Skirmishing

MONTREAL (Staff) — Union rumblings continue to issue from the Newfoundland woods, scene of a major labor explosion last winter (**FP**, March 14).

International Woodworkers of America, expelled from Newfoundland by a government-backed law, is still trying to regain influence in the woods.

Its tactic is to "bore from within" the membership of Newfoundland Brotherhood of Woods Workers, the government-sponsored union which replaced IWA in control of the island's loggers.

Against this background, NBWW has warned its members that anyone caught helping the IWA cause will be suspended. This could lead to loss of job.

Despite this hint of some internal trouble, NBWW says this is IWA's "dying kick". It says there may be a few small pockets of IWA activity, but "very few".

IWA meanwhile has been sending circulars to woods camps asking for loggers' support and dues.

Ready Mix Men Form Association

Ready Mixed Concrete Association of Ontario has been formed with head office at 90 Eglinton Ave. E., Toronto.

Members are in Toronto, Hamilton, Windsor and Ottawa.

Purpose:

- **Co-ordinate** efforts in meeting industry problems.
- **Maintain** highest standards of business practices.
- **Increase** sale of high-quality ready mixed concrete throughout Ontario.

Officers: President, James L. Franceschini, vice-president, **Dual Mixed Concrete & Materials Ltd.**, Toronto; 1st vice-president, R. T. Cosburn, general manager, **King Building Materials Ltd.**, Oakville, Ont.; 2nd vice-president, Allan Kerbel, vice-president, **Metro Ready Mix Co.**, Rexdale, Ont.; honorary treasurer, Paul J. Duggan, assistant treasurer, **Canada Building Materials Ltd.**, Toronto; general manager, Robert L. Moran, formerly sales manager, **Siporex Ltd.**, Toronto.

There are 71 ready mixed concrete operators in Ontario of which more than half are members of the new association. It's expected that 90% of the companies in Ontario will be members before the end of November.

What's Ahead For Seaway?

Here's the outlook, good and bad, as the first season closes . . .

By RALPH YOUNG

What's ahead for the Seaway?

As its first shipping season comes to an end, what are the real results?

There's no doubt of this: Opening of our fourth seacoast to ocean shipping has been a mixed blessing.

Some areas have been helped by lower freight rates and direct ship service. Port of Toronto has had a record year. Other ports also have had a gratifying increase in business.

But Canadian shipping interests and some Canadian industries have been hurt.

Tolls on the Welland Canal, which used to be free, have cost Steel Co. of Canada more than $250,000.

Delays in the Welland, due to heavier traffic, have probably been even more costly than payment of tolls.

Ontario Paper Co., which annually moves about 700,000 tons of paper and raw material through the Welland, says its ships have lost 95 operating days because of delays in the Seaway and Welland canals.

Cost of having a ship idle: $1,000 to $3,000 a day.

Insurance rates for all users of the waterway may soar next year. Accidents have doubled.

Up to Aug. 15, there were 77 accidents causing more than $1,500 damage each, compared to 44 in the entire 1958 shipping season, the U. S. Coast Guard reports.

Admiral Lyndon Spencer, president of the Lake Carriers Association, blames the increase in accidents on foreign ships that had not used the lakes before and didn't pay enough attention to the rules of the road for inland waters.

In some respects they are different from those on the ocean lanes. Some whistle signals have different meanings, for instance.

And the foreign bottoms have brought goods, at reduced freight rates, landed in direct competition with Canadian-made products—steel, automobiles, glass, textiles, to name but a few.

Direct ship connection between Toronto and Japan was established in September.

On its first voyage the Muneshima Maru, a 520-ft. vessel, one of the largest ever to dock in Toronto, unloaded 860 tons of mixed cargo including toys, canned fish and oysters, ceramics and earthenware, plywood and draperies.

Great Lakes ports which used to do a thriving business transshipping grain and other bulk cargoes between the big lakers and smaller ships that could use the old St. Lawrence canals, have seen their importance as ports dwindling. Kingston is one such port.

Admiral John M. Will, president, **American Export Lines**, recently outlined his firm's experience on a direct Great Lakes to Mediterranean service.

His company, he said, will lose $500,000 this year, including $107,000 in damage to ships and $307,000 additional expense in outfitting the ships for the Lakes trade and the cost of delays at the canals.

Admiral Wills cited six Seaway problems that will have to be solved:

- **Canal congestion** must be corrected so that ship operators can maintain service with fixed schedules; otherwise they lose potential business.
- **Personnel** — ships' crews, pilots and canal staffs—must do a more efficient job to provide quick, safe passage, especially for the larger vessels.
- **Navigational bottlenecks** must be cleared and harbors dredged where necessary. A deeper channel in the Detroit River is essential.
- **Overland tariffs** must be revised and made more realistic based on distance cargo is carried, to give lake ports a competitive chance to carry available tonnage.
- **An intensive educational campaign** is necessary to bring cargo offerings from a wider area; 95% of cargos now originate within 250 mi. of lake ports.
- **Seaway tolls** should be on a long ton basis, on which shipping revenue is computed, rather than on short tons as at present.

Another complaint of Canadian and U. S ship operators is that foreign ships have grabbed 26% of grain business from the Upper Lakes, at distress rates.

And, because most ocean ships are not equipped to take on grain quickly, they caused congestion at the elevators.

But there is a bright side:

Capt. E. G. Hopkins, director of trade development, Toronto Harbor Commission, reported to the Automotive Transport Association of Ontario, at it annual convention in Toronto this week:

More than 800 foreign vessels have called at Toronto this year, 200 more than in 1958—and many of these were large vessels which could not use the old St. Lawrence canals.

These ships represented 39 lines from Japan, South America, the U. K., the Mediterranean, European and Scandinavian countries. They handled more than 700,000 tons of cargo, an increase of more than 150%.

This meant increased business for truckers, stevedores, customs brokers and others.

What of the future?

Next year, Capt. Hopkins predicted, should see one million tons of cargo. In the next three years this should rise to almost two million—all this in addition to four million tons carried by lake vessels which should increase also.

"With improvement planned by the federal government in the Welland Canal during the coming winter, a 25% speed-up will be possible in moving ships through the canal.

"And some of the vessels that came from overseas for prestige and to investigate trade, may not come back. All this should help to smooth out ship movements.

"Toronto now has three modern $1-million terminals. When the 12 mi. of existing berthage reaches its capacity, we will enlarge the port area—in fact, work has already commenced—to provide another 12 mi. of berthage with 1,400 acres of dock properties," Capt. Hopkins said.

Hon. George Hees, Minister of Transport, predicts that shipping will settle into more of a stable pattern with lakers taking cargos down through the Seaway, to be transshipped at Montreal or some other port on the St. Lawrence River.

"Both Montreal and Halifax find that their trade is up, despite their fears to the contrary," the minister said.

Bugs have pretty well been taken out of ship movements in the Welland Canal—"since the middle of August there have not been any delays on the Welland worth mentioning," he added.

With a tendency for larger vessels to use the Seaway—and the smaller, uneconomic vessels being scrapped — tonnages will increase faster than the increase in actual number of ships moved. This will improve the toll revenue.

"I don't expect to see any immediate change in the toll structure," Hees said.

"We are increasing the capacity of the Welland by 25% by building tie-up walls. This will bring ships into better position to move quickly into the locks and enable us to have more ships in the canal at any one time. We're also giving the canal a very complete overhaul this winter."

It is expected that work to be done before April will cost more than $7 million.

"We'll twin the Welland canals when the set-up makes it necessary—when the traffic requires it. But it will cost at least $150 million and that would, I expect have to be paid by extra tolls." Hees said.

Talk Control of Advertising

Can misleading advertising be controlled?

Representatives of several advertising, sales and media associations have been grappling with the problem.

This type of advertising stems mostly "from fringe advertisers at a local level who are not necessarily connected with any association," according to several officials of 14 associations who met in Toronto.

Both legislation and industry self-regulation were discussed as possible means of controlling these advertising practices.

The meeting, called by Federation of Advertising & Sales Clubs and chaired by Federation President T. D. Jotcham, supported a general plea for a program to "create a positive image of advertising and selling".

It also agreed that there should be closer liaison among the various groups concerned with marketing — possibly to take the form of a committee of association representatives.

"We must be fully aware ourselves of the contributions that advertising and selling are making to our economy," Mr. Jotcham told the meeting.

"And we must sell it hard through our own organizations, through educational channels and to the general public."

COLONIAL BOND

outstanding among medium price papers is your best choice for all these uses

Colonial Bond is a busy, business like paper —one of Canada's biggest selling bonds. The reasons are not hard to find. For a rag-content paper, it is very moderately priced, and looks more expensive than it is. It is versatile. Colonial Bond makes a handsome letterhead, stands up to the wear and tear imposed on general office stationery, brings crisp dignity to fire insurance policies and other important forms. Specify Colonial Bond when you want *quality* without *extravagance*.

TWINDOW
keeps the weather outside...where it belongs

This, sir, is the picture of a man enjoying the comforts of his warm, draught-free living room. What keeps his living room warm and draught-free? Why, Twindow*, of course! Twindow is made of two pieces of clear glass separated by an imprisoned layer of dry, non-circulating air. Makes an excellent insulating window that keeps out winter cold and summer heat—reduces heating and air conditioning costs—provides clear, undistorted visibility the whole year 'round. Because there are no draughts, floor areas are usable right up to the windows. And, sir, there are no storms to put up, take down... or wash! This you'll like best of all!

Insist on Twindow installations throughout your home. For complete information get in touch with your local Canadian Pittsburgh branch.

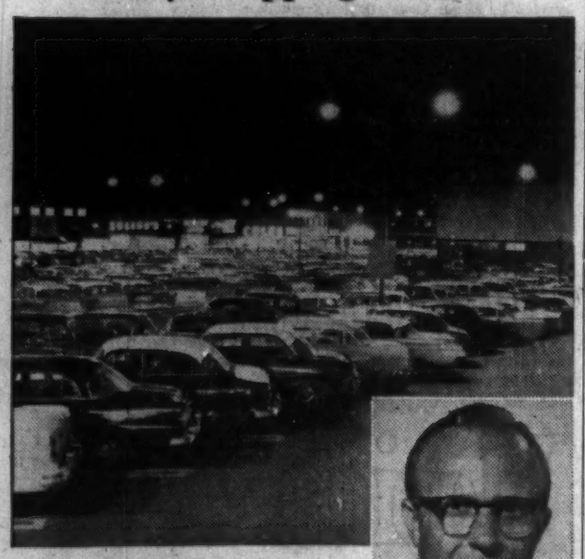
How Principal Investments Ltd. got more light per dollar at Lawrence Plaza, one of their many shopping centres.



"The reason we installed mercury vapour lamps," says David Grossman, their Electrical Engineer, "was to get more illumination for the same wattage. The Westinghouse lamps we installed fulfilled our highest expectations."

Westinghouse Mercury Vapour Lamps save you money three ways:

More Light. You get more lumens per watt. That means that lighting a given area costs you *less* . . . or that you get a larger area lit for the same amount as you would pay for other types of illumination.

Trouble Free Light. You have less maintenance and lower service bills with mercury vapour lamps. This has been proved by extensive tests, and observation of these lamps under normal conditions for long periods.

Longer Lamp Life. The average mercury vapour lamp continues to operate efficiently long after other bulbs fail. Lack of frequent bulb changes keeps relamping and labour costs down.

Westinghouse introduced mercury vapour lamps in 1930 and pioneered their commercial use. Today, the widest range of mercury vapour bulbs in Canada is offered by Westinghouse.

For information on how you can cut the cost of illuminating parking lots, streets, large indoor bays etc., write to Lamp Division, Canadian Westinghouse, Three Rivers, Quebec.

YOU CAN BE SURE...IF IT'S

INSIDE THE NEWS

A column of fact and comment on national and international affairs . . .

By J. K. EDMONDS

LIPSTICK, cranberries, dairy products and cigarettes have all suffered lately from a new business hazard that might be called "scientific flap".

A scientific flap occurs when someone with a ring of authority announces that a common consumer product may, under some circumstances and if used improperly, cause ill effects to a certain proportion of users.

No matter how limited the real scope of the warning, the entire industry suffers a blow.

Sometimes the scientific concern proves durable. At other times it vanishes under a ringing counter-declaration by an equally eminent authority.

Oddly enough, the most common form of rebuttal is to induce a politician to be photographed using the item in question.

When Manitoba's milk was alleged to have a high content of strontium-90, Hon. Errick Willis drank several glasses of milk in the presence of the press.

Health Minister Monteith has announced that he intends to eat cranberry sauce with his Christmas turkey, and will probably be photographed in the act of doing so.

Perhaps Mrs. Fairclough will be photographed applying lipstick.

Many a chain - smoking doctor has made it more difficult for his colleagues to sell their patients on the idea of lung-cancer hazards.

No one — including industry — should object to the basic assumption that products sold to consumers should be safe to use, or to the assumption by governments and scientists that the public must be protected at all cost.

But both industry and consumers are entitled to ask that comments of this nature be precise and restrained.

The real danger is that we may become too used to warnings that fizzle out, and ignore a major hazard when it arises.

* * *

Canadians interested in trade and investment should keep an eye on the International Study Group for the Promotion and Protection of Private Investments.

This isn't another government agency. It's a private body set up to promote measures to encourage international private investments by guaranteeing their security.

It's the brain-child (FP, Aug. 10, 1957) of Dr. Hermann Abs, managing director of the **Deutsche Bank** of Frankfurt.

A meeting in Geneva last month was attended by Dr. Abs, Lord Shawcross (U. K.), Rene Massigli (France) and Fernand Baeyens (Belgium).

According to news reports, this group seeks wider representation from both capital-importing and capital-exporting countries.

Since Canada is by far the world's largest importer of private long-term capital, and an exporter of capital as well, we have an obvious interest in the work of the ISGPPPI (why not call it the Private I?).

* * *

Your flesh may still be creeping, if you read Sir Charles Darwin's views on the world population problem in the U. S. News & World Report (Nov. 23).

Sir Charles (a grandson of the famous Darwin) is a prominent member of the Standing Room Only school of thought — the attitude that warns us how tough things are going to be, before long, because there are too many people in the world.

Just as an antidote, here are the closing paragraphs of a paper on population growth by E. E. Hagen, visiting professor of Economics at MIT.

It appeared in the June issue of the American Economic Review, and is based on a detailed study financed by the Rockefeller Foundation.

"A word about the very long run is in order. Even at a rate of growth of 1% per year, the world's population would double in 70 years, quadruple in 140 years, reach a mass equal to that of the earth in a few thousand years and so on.

"But this fact does not seem to me the cause for alarm that it appears to some observers.

"These observers do not seem to have taken account of the prospective trend in technology.

"In the countries of the world where population has grown the fastest during the past 150 years, the advance in technology has far outstripped it, and per capita income has steadily risen.

"There is reason to assume that this relationship between technological progress and population growth will hold true in the future for the entire world.

"'Technological progress is now spreading to the other major countries of the world, and during the 20th century will probably have spread to virtually all countries.

"There is no reason to place any given limits on the creation of resources by technology.

"One of the determinants of the rate of technical progress is the base of existing scientific and technical knowledge; increasingly rapid expansion of that base provides a foundation for increasingly rapid advance of technology, without any definite limit.

"While population is reaching a mass equal to that of the earth, technology may progress so that subsistence and energy are obtained from the entire known universe, or several such universes, and only one man in a thousand may be living on the earth.

"Of course, in the very long run human beings may be devoting less of their energies to technological progress and it may slow down.

"But population functions in the far future may also be radically different from those now operating.

"One may well feel deep concern about the intermediate-run problem in certain low-income countries that are not experiencing technological progress, but it seems reasonable to be more concerned with any of a dozen world problems than that of prospective 'standing room only'."

NEW FIRE ENGINE

A new design in fire engines, demonstrated by **Leyland Motors Ltd.**, England, has a diesel engine mounted amidship below the frame, to provide a low centre of gravity, and the pump unit at the front so that it can be parked close to the water supply.

Instant Potato Flakes Key to Growers' Problem?

Can a convenience food package reverse a basic trend in Canadian eating habits?

The question is important to potato-growing section of agriculture, a major one in Canada.

Plagued by a 30-year steady downtrend in potato consumption, growers hope a new Ontario plant and its instant mashed potato product will help bring back some lost demand.

The $1 million plant, built and opened this year by **Salada-Shirriff-Horsey Ltd.** at Alliston, Ont., has bought 11 million lb. of this year's Ontario crop.

The operation could develop into a substantial market for growers as consumer demand expands.

It's the first plant of its kind in Canada — making instant mashed potatoes by a flake method.

The company is licensed as sole Canadian manufacturer by this process which requires a "high solids" type of potato.

This type of product is available in the Alliston area, centre of one of the province's major growing sections about 60 mi. north of Toronto.

After cooking and mashing, potatoes are dried on a single drum dryer with capacity to process 8,000 lb. of mashed potatoes into flakes every hour.

Canadian Wins U.S. Certificate

Arthur Bullied, secretary-treasurer of Associated Credit Bureaus of Canada, has won the graduate certificate for the basic course at the Institute for Organization Management at Yale University.

The U. S. chamber of commerce sponsors the course.

It is a concentrated training program in management of associations and chambers of commerce, aimed to equip an executive with basic skills and methods of management work.

ANNOUNCEMENT

DUSTBANE EXECUTIVE APPOINTMENTS

C. E. PICKERING — G. H. PIMM — C. G. WELCH

C. E. Pickering has been appointed Chairman of the Board of Directors of Dustbane Products Limited. At the same time the election of two new directors was announced. G. H. Pimm, vice-president and director of sales, and C. G. Welch, vice-president and director of art production, complete the Board. Existing members continuing in office are Miss G. C. Pickering, president, G. W. Mitchell, G. D. LaFortune, and L. A. Kelley. Two new manufacturing plants — in Vancouver and Halifax, a new distribution centre in Hamilton serving south-western Ontario, the formation of Dustbane (Newfoundland) Limited, plus the introduction of several new product lines, are all part of this year's expansion programme of the Dustbane organization.

What if a key man were taken out of your picture?

The death of a key man in your organization can suddenly confront you with a host of obligations. Life Insurance can provide the cash:

— to partially indemnify your company for the loss of his managerial ability.
— to give your business the necessary liquid position to take action under Section 105 of the Income Tax Act (previously undistributed surplus).
— to allow you to redeem outstanding preferred stock.
— to honour a deferred compensation plan for his widow.

There are other benefits also available from well planned Business Life Insurance, such as supplementary pension plans for key executives.

To discover, in detail, how Business Life Insurance can give you low net cost security of this kind, call or write to the nearest branch office of The Mutual Life of Canada — the Company with the outstanding dividend record.

MUTUAL LIFE OF CANADA

Where to go - how to go - where to stay

Play, Man, in Cayman, Off-Track Sunny Isles

By BEATRICE RIDDELL

For a delightful, off-beat extension to your Jamaican holiday this winter, try the Cayman Islands.

Located about 175 mi. north west of Jamaica and an equal distance south of Cuba, this Jamaican dependency is still one of the few untraveled parts of the Caribbean.

So far, the islands have not been disturbed by modern influences such as telephones, radios or TV sets. Communication to the mainland is by cable only.

But gradually the islands are getting more attention from the tourists. At least one cruise ship will call there this winter.

Georgetown, on Grand Cayman, has been substituted for Havana in the Dec. 19 itinerary of **Swedish American Line's** Gripsholm cruise.

And Toronto travel agents claim a growing interest in these "unspoiled" islands.

While the islands have remained apart from the main stream of Caribbean tourist traffic, a holiday here is by no means a "rugged" experience.

Since 1951, five delightful hotels have been built on Grand Cayman, chief island of the group.

All of the low rambling design that suit the Caribbean landscape so well, some of these hostelries have swimming pools, private beaches and tennis courts.

For excellent service in this relaxing atmosphere you will pay from $12 to $45 per day for two and including all meals during the winter months. In summer, minimum daily tariff is $8 for two.

You won't find any golf courses or "organized" night life. But the fishing is among the best in the Caribbean.

A 48-ft. boat, accommodating a party of six, may be hired for about $100 a day for fishing in the open sea. Smaller craft, carrying up to four fishermen, cost about $30 a day.

Swimming is fabulous. There is one 6-mi. powder-sand beach on the west side of Grand Cayman, and many smaller beaches in secluded coves which you can have all to yourself.

Skin diving is very popular in the sparkling, clear water. Countless varieties of colorful fish and plants lie below the surface.

There is a small yacht club with boats available for tourists. And in winter, there's good hunting for teal, widgeon, baldpate and moorhen.

Cayman is unique in the Caribbean. It is the only place in this area where the majority of the natives are white skinned. Mostly of English extraction, they are tall, blonde and tanned to a gorgeous honeybrown.

You will notice the high preponderance of women here, for Cayman men — traditionally among the word's best sailors — spend much of their time at sea.

Discovered by Columbus in 1503, the islands were originally called Las Tortugas because of the great number of giant sea turtles found here. Turtling is still a major occupation.

Grand Cayman, biggest and most densely populated of the islands, is only 22 mi. long and 8 mi. wide. Roads are narrow and sandy and transportation is usually by bicycle. But a few taxis are available.

There is plenty to see.

"Hell", freak collection of brightly colored lava rock surrounding "bottomless" pools, Rum Point where you can cook lobsters you have just caught over hot coral rocks, Pedro's Castle, a house built completely of conch shells, ruins of old Fort George, Turtle Krall in North Sound and many coastal caves.

These are just a few of the outstanding sights.

Wild canaries and parrots are seen all over the island, and orchids of many variety grow in profusion.

Seventy miles northeast of Grand Cayman are the smaller Cayman Brac and Little Cayman.

Cayman Brac, connected by air from Grand Cayman ($28 roundtrip) boasts the most startling scenery of the trio and has a few tourist amenities including one pleasant hotel. Little Cayman is almost deserted.

You can include a visit to Grand Cayman in your Jamaican holiday for no extra air fare.

If you fly direct to Jamaica (**TCA** from Toronto, **BOAC** from Montreal, **Avianca** or **BOAC** from New York), you can return via Grand Cayman and Miami for the same fare as the direct round trip.

BWIA offers three Viscount flights a week (tourist class only) on the Jamaican-Grand Cayman-Miami portion of the trip.

Return fare from Toronto to Kingston, Jamaica: $237 tourist, $287.80 first class.

If you have time to spare for a sea voyage, there is freighter service from Florida and Jamaica.

GRAND CAYMAN, in addition to miles of beautiful beaches, has some of the best fishing in the Caribbean. Catching crayfish or spiney lobster with spears is a favorite sport.

Airline Travel Card Credit Aristocrat?

By CLIVE BAXTER

The airlines hope to make their Universal Air Travel Card into the aristocrat of travel credit cards.

Discussions are now under way between the U. S. Air Traffic Conference — made up of all U. S. domestic airlines — and hotels, restaurants, car rental agencies and the scores of other potential credit extenders.

There is nothing basically new about the card, which has been in circulation for a number of years.

But airlines are promoting it, hoping to make it the most valuable credit reference going. And there is every indication they will succeed.

Here's why:

Before one of the cards is issued the holder must pay a $425 deposit to the airline that issues it. That rules out the "minor leaguers."

Because of this guarantee, the proposition now under discussion eliminates the complicated and expensive business of clearing all credit dealings through a central office.

That is now done by such leaders as **American Express and Diners' Club.**

Presentation of an air travel card will be proof of credit, and the holder will be offered credit in the old-fashioned way—i.e. at the end of the month a bill goes direct to him from the supplier of services.

In this way, hotels and restaurants do not have to pay any commission if a client uses the airline card.

Commission is the major "beef" against the other all-purpose travel cards.

There is one snag. The present deal gives only airlines a chance to recover the deposit.

Yet all reports indicate considerable enthusiasm for the scheme. The reason is simply that, as a group, air travel card holders are a credit managers' dream.

Cards are issued to individuals (and families) or to companies. Where a company pays the deposit, it can have any number of cards for employees' use.

But since the organization loses its deposit and card if bills aren't paid, employers are very selective in handing out duplicates.

There are roughly one million cards in circulation at the present time (including individuals and those whose companies have paid a deposit).

Most are in the U. S., but many are held in Canada and Europe.

A composite picture of holders shows:

- **57%** earn over $10,000.
- **44.7** is the average age.
- **35.7%** are presidents or senior executives of companies.
- **They average** 30 trips a year of more than 200 miles.
- **85%** of these are business trips.
- **90%** are men.

This last statistic appeals to creditors who find the female of the species a little more inclined to go overboard than the male.

For hotels, restaurants, etc., the new plan promises to save money. There would be no question of having to pay handling charges and commissions.

If agreement is reached it seems the holder of an air travel card will become the royalty of the fast-growing credit card kingdom.

Tourists Like Saskatchewan But They Have a Few Gripes

Saskatchewan's annual poll of tourist opinion indicated that this year's visitors were, on the whole, happy with what they found.

But as in the case of Manitoba's tourist survey (FP, Nov. 21), there were some constructive criticisms.

Chief complaints:

- **Motels** were too expensive.
- **Monday closings** caused inconvenience.
- **Fishing** license fees were too high.
- **Food** was described by many visitors as "just average."
- **There were not enough camping grounds.** And some camp and picnic areas were not as clean as they should have been.
- **U. S. visitors** complained about the rate of exchange.

According to the provincial government report, 42% of this year's visitors were from other Canadian provinces.

Canadians covered more territory than U. S. visitors, stopping in towns and resort areas for shorter periods of time. U. S. tourists tended to stay in one spot for a longer period.

Average length of stay in the province was 6.2 days. Spending averaged $93.92 per visitor.

Travel Tips

JET SERVICE from Tokyo to San Francisco and Los Angeles via Great Circle Route has been launched by **Pan American.** The new service is in addition to the recently inaugurated flights via Hawaii. Flying time: 11 hours, compared with 13 hours, 35 min., via Honolulu. Westbound flights on the shorter route will start shortly.

• • •

BEA HAS RECEIVED the first two of seven Comet 4B jet planes on order from de Havilland Aircraft Co. The planes will be used first on routes between London and Rome, Athens, the Middle East, and later between London and Warsaw, Moscow, Scandinavia and other Central European cities.

FRANCE PLAYED HOST to about four million foreign visitors during the past summer — an increase of 15% over the previous year. Visitors' spending was about $506 million. Most popular areas: Brittany, Normandy, the Midi, the Riviera and French Alps.

• • •

A NEW currency denomination — the agora — is announced for Israel, according to **Deak & Co. Inc.,** foreign exchange agents. Starting Jan. 1, the Israel pound will be divided into 100 agorot, and the pruta (one thousandth of a pound) will be abolished.

Travel Tips

GRAPETREE BAY HOTEL, new $2.5 million hostelry to open Dec. 1 on St. Croix, Virgin Islands, will be the largest hotel on the island. Situated on a 300-acre estate, stretching a mile along the sea and bi-sected by a low-lying range of mountains, the new hotel promises to be one of the most exclusive resorts in the Caribbean. Rates from Dec. 1 to Jan. 9: $38 to $50 per day for two, Modified American Plan. From Jan. 10 to April 15: $44 to $52. Lower summer rates will be available from mid-April to late autumn.

ANNOUNCEMENT

LEETHAM, SIMPSON APPOINTMENTS

R. W. D. HANBIDGE

WILLIAM A. HUNTER

Two senior appointments have been announced by James W. Simpson, president, Leetham, Simpson Limited, management consultants with head office in Montreal. R. W. D. Hanbidge is named director of the marketing division and William A. Hunter becomes director of the industrial division. Mr. Hanbidge, a native of Peterborough, Ont., takes charge of all sales and marketing consulting services in Canada and the United States. Before joining Leetham, Simpson, he had extensive sales, marketing and merchandising experience with Canadian Industries Limited and Reader's Digest. Mr. Hunter, who joined Leetham, Simpson, in 1953, has directed a wide variety of manufacturing consulting assignments and pioneered the firm's work in the field of Master Clerical Data, a new technique for office cost control. A native of Broadview, Sask., he was formerly an independent management consultant.

News and views on the British securities markets, specially written for FP by one of London's distinguished financial writers.

Price War in Cable Business Cuts into U. K. Firms' Profits

A LONDONER'S FINANCIAL NOTEBOOK

FOLLOWING the abandonment of home price arrangements in May last, a fierce price battle has broken out in the U. K. cable-making industry and is having a serious effect on profits.

As a result of recent mergers and take-overs the industry is dominated by two large groups, **British Insulated Callender's Cables** and **Associated Electrical Industries.**

But there are still a score or more of smaller firms, some public but most of them privately - controlled, fighting for a share of business. It is these who are being hardest hit.

Johnson & Phillips, one of the largest of the independent cable companies, has stated that prices are now so low that profits are in some cases non-existent. The firm is paying no interim dividend.

According to W. H. McFadzean, chairman of B.I.C.C., main reasons for the price war are excess capacity and lack of mutual trust. He says that his group wants no more than its proper share of markets, but gives no precise definition of that term.

Causes of the excess capacity include the growth of overseas manufacture and the gradual replacement of rubber by thermoplastic cables for many purposes, leaving rubber cable plant underloaded.

Fortunately for the industry, demand for cables is at a higher level than in 1958, but it is still not high enough to solve all the current problems.

More will have to be done to eliminate surplus plant and to check uneconomic competition. A further reduction in the number of independent companies seems likely.

* * *

The post-election boom having subsided, markets have become irregular.

Stewarts & Lloyds	7⅛	7⅜	6.70

Slackening of interest in ordinary shares has been accompanied by an improved demand for Government bonds.

In a speech in London Cameron Cobbold, Governor of the Bank of England, referred to "'the marked and somewhat disquieting boom in equity prices."

He also mentioned "a rapid rise in bank advances which will need watching if it should continue much longer at the same pace."

These remarks were taken by some operators as a warning that the authorities here were getting ready to step in with remedial measures, and that the time had come to play safe.

Mr. Cobbold and his chief, Chancellor Derick Heathcoat Amory, will obviously be watching matters closely, but for the moment they seem to have stopped the boom getting out of hand by no more than a few well-chosen words.

Business continues to prosper, with some exceptions. Formerly depressed industries such as textiles and machine tools are sharing in the improvement.

The motor industry continues to set the pace and car exports from the U. K. in October totaled 49,892, compared with 38,513 in September and 39,230 in October last year.

Commercial vehicle exports last month totaled 12,208, against 8,128 in September and 7,403 in October, 1958.

At the annual meeting of the **Fairey Co.,** Chairman Geoffrey Hall announced that they were within a few weeks of signing a development contract for the Rotodyne vertical take-off airliner with the U. K. Government.

This could ensure support to the extent of some £4 million. The company also stands to get a military order for Rotodynes plus an initial six from **British European Airways.**

On the more general outlook for Fairey and the rest of the U. K. aircraft industry, Mr. Hall was less hopeful. Requirements for military aircraft had been reduced and in the civil field competition was intense.

He disclosed that the company had had to scrap its ultralight helicopter project as it had been unable to get a government order. An important guided weapons contract had been cancelled, due to changes in policy.

Referring to their Canadian interests, Mr. Hall was fairly optimistic. Efforts to obtain commercial work had met a good measure of success and prospects for the air survey business seemed to be good.

Fairey Aviation of Canada had won a contract for the conversion of a number of Martin Mars flying boats for forest fire fighting.

The main problem facing Fairey and similar U. K. companies is that it is largely dependent on Government policy, and the Government's aim is that aircraft firms should merge.

The companies, not unnaturally, want to keep their own identity, if they can.

Rio Tinto, the U. K. mining group which has a big stake in Canadian uranium is planning to extend its activities in gold mining.

The company is making a £2.5 millio. bid for the share capital of Cam & Motor, the largest gold mining concern operating in Rhodesia. The offer is recommended by the Cam & Motor board.

The bid has been made with a view to the "consolidation and expansion" of Rio Tinto's Rhodesian mining interests. The group already controls two small mines, Big Ben and Patchway, near to the Cam & Motor properties.

Cam & Motor is an old-established gold producer, with a steady dividend record. In the year to June 30 last it milled a total of 379,490 tons. Published ore reserves exceeded 1.5 million tons.

Rio Tinto is also interested in gold mining to a limited extent in Canada through **Preston East Dome Mines,** which it controls through Rio Tinto Canada.

Management Urges Praise For Unions

Paper mill unions in central Newfoundland should get credit for their stand in this year's labor troubles in the woods, a pulp and paper industry executive believes.

Mill unions recognized the danger to the one-industry economy and helped avert it.

That's the view of T. R. Moore, president and general manager of **Anglo-Newfoundland Development Co.**

In refusing to support the striking woods union, the mill unionists ran the risk of losing some of their gains they had made through the years as international affiliates, he told a meeting of Central Newfoundland Chamber of Commerce.

"The truth is that those mill union men faced up to the fact that in central Newfoundland there is the economic factor of one industry only which has to be taken seriously into consideration even when the solidarity of organized labor hangs in the balance.

"We as businessmen should have realized long before that in an economy, centred around one industry the way was being paved for a crisis such as the one we faced," he said.

More diversified industry is needed to broaden the economic base of the area.

Businessmen should work toward bringing new industries and businesses to Grand Falls, Moore said.

He also suggested the town may not be far away from establishment of normal municipal government. The industry carries the burden now, he pointed out.

a wise old merchant in ancient Baghdad

—once said: "A part of everything you earn is yours to *keep!*" He insisted that his sons and grandsons save one shekel out of each ten they received in wages or trade.

He knew through experience that a man who permanently puts away ten percent of all he earns, never needs to throw himself upon charity . . . and can spend the remaining 90% as he pleases.

Today many men "compel" themselves to salt away about 10% of all they earn for their old age, the emergencies of life and the replacement of family income if death strikes unexpectedly, by investing in long-term *permanent personal policies* of life insurance.

New Soft Drink Ready to Hit National Market

Sussex Ginger Ale Ltd. has big plans for its lemon-lime drink called Bounce . . .

By ROY K. COOKE

SUSSEX, N.B.—**Sussex Ginger Ale Ltd.** here plans national distribution of a new soft drink called Bounce.

It's part of a long range program that has increased company's sales 300% since 1946.

Sussex products entered Quebec for the first time last summer, through a distributor at New Carlisle in Gaspé.

Sussex started in 1885 bottling local mineral water.

Bounce, introduced in June with only partial Maritimes distribution, so far has doubled expected sales. It will get heavy advertising barrage in the area next spring.

Bounce is a blend of pure lime and lemon juices, shipped in concentrated refrigerated form from Florida. It took three years to develop the flavor and blend.

Sussex claims it is the first time in Canada that fruit juices have been combined this way.

The merchandising program will cover the Maritimes first, which will take another 12 months, and then start expanding across Canada.

The promotion pitch will play up the soft drink's low sugar content.

Explains H. A. Fredericks, sales manager and vice-president:

"It has a low calory content for the diet conscious and is an excellent mixer with gin, rum and vodka."

Franchise set up will be similar to those for Seven Up, Pepsi and other "big name" drinks.

It's estimated that small town bottling plants for the new Bounce franchises will cost $50,000; in larger cities about $500,000.

Special sales teams have introduced Bounce into six Maritimes communities. Promotions included one bottle free with six, and customer sampling in supermarkets.

This tied in with concentrated TV and radio spots plus full page newspaper ads. Salesmen traveled with the truck drivers.

Philip Bachman, of Halifax, has the six figure advertising account. The Sussex ad budget has increased 20% every year since 1954, and it's expected that Bounce will have 30% of the budget by the end of 1960.

Ad theme: "Bounce Back with Bounce."

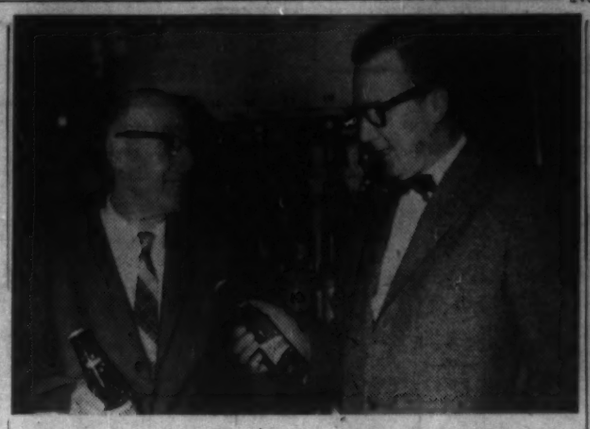
Bachman also designed the new Bounce package.

President of Sussex Ginger Ale Ltd., is James A. MacMurray of Saint John, also president of **Eastern Securities.**

Harvey Murray, of Sussex, is vice-president; Robert Frewin, of Montreal, and H. Hugh MacKay, Toronto, are members of the board.

Sales manager H. A. Fredericks began a reorganization campaign three years ago. Average age of key executives was reduced from 56 to 35 years. Some district supervisors are 30.

In the last 12 months, $200,000 was spent on new equipment.



BOUNCE bouncers: H. A. Fredericks (right), sales manager of Sussex Ginger Ale Ltd., and F. E. Lisson, manager of Sussex's plant at Sussex, N. B.

G-W Saddlery to Expand, May Buy Toronto Store

More acquisitions, including a store in Toronto, are contemplated by **Great West Saddlery Co.**

To conserve cash, President Hugh Paton told a shareholders' meeting this week, it is planned to issue a dividend partly in stock and partly in cash.

Distribution date will probably be Dec. 31, as it was last year.

Sales and earnings in the fiscal year ending Jan. 31 will be the highest in Great West Saddlery's history, President Paton said.

Profit is expected to be more than 50% higher than last year's 30c per new common share.

Chapples Ltd., a Lakehead department store chain acquired early this year, "is enjoying a very good year".

"We hope that if we get a little snow, business of this subsidiary will be 4%-5% ahead of last year," Mr. Paton said.

Geo. H. Hees Co., a controlled but unconsolidated subsidiary of Great West Saddlery, earned a profit in September. Mr. Paton said that this was the first month in two years when Hees Co. did not operate at a loss.

"In the last three months," he said, "about $175,000 in overhead has been lopped off. All of the executives have taken a salary cut.

"Some of the departments that were losing money have been closed out, and their inventory sold."

The parent company is endeavoring to remedy Hees' shortage of working capital, which is the result of the past two years' losses.

Other highlights of the meeting:

- **Size of the directorate** was increased to seven from five members. Only permanent addition made to the Great West Saddlery board immediately was Leon S. Newton, president of **Barnard, Sumner & Putnam,** a Worcester, Mass., department store.
- **Head office was changed** to Toronto from Winnipeg. Merchandising, buying, accounting and executive staffs will be moved to Toronto after the beginning of 1960.

"We are changing entirely the scope of Great West Saddlery operations," the president explained. "Emphasis will be much greater in the province of Ontario in the next few years."

Canada's Leading Buildings Put the Accent on Comfort

Comfortably controlled air conditioning pays dividends in better morale, increased productivity, less absenteeism, and reduced turnover of employees and tenants.

The buildings shown here — and countless others — put the accent on comfort with Johnson Air-Conditioning Control Systems. A specially planned Johnson System with *individual room* control is the finest obtainable. It provides your building with an ideal environment for business efficiency.

At the same time, a pneumatic control system by Johnson offers you important economic advantages. It can easily include a control centre from which one man can supervise and operate even the largest air-conditioning systems with unmatched efficiency and savings. Pneumatic controls also are simpler, easier to understand, and less costly to operate and maintain than any other type of controls.

When you build or air condition, include the superior comfort and performance features of a Johnson Control System. Your consulting engineer, architect, or local Johnson representative can supply you with full information.

What's New

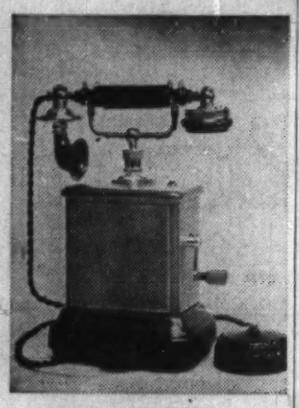
New products, new uses, new ideas, new money-makers. FP reports them here and invites contributions. Write to FP, 481 University Ave., Toronto.

TIP-PROOF baby feeding dish should prevent some messes. It has a suction cup on the bottom to hold it firmly in place. The plastic dish is divided into three deep sections, can be sterilized repeatedly without damage, the maker says.

* * *

HARDLY NEW, but old magneto telephones or stand-up style telephones are for sale as antiques or for use in an intercom system. Danish firm says its magneto phones are fully reconditioned, guaranteed ready for use. U. S. firm makes same claim for its stand-up phones, priced at $3.25.

* * *



OLD PHONE

REMEDY for sloppy socks may be a newly developed synthetic elastic thread. The thread has a pulling force stronger than that of natural rubber and will last as long as a man's socks, maker says.

* * *

FOUNDATION GARMENT industry will be rocked by another new synthetic textile fibre, **Du Pont** says. It's expected to bring as marked a change as nylon did in the hosiery field. New fibre weighs less but has two to three times greater "restraining power" than conventional elastic thread, maker says.

* * *

MINIATURE Van de Graaff generator

MOBILE SNOW MELTER consists of a truck on which is mounted a snow loader, gasoline or diesel oil power plant, melting chamber, combustion air blower and fuel system. Melted snow is discharged through a flexible connection to sewer. Can handle from 25 to 100 tons an hour.

* * *

ELECTRICAL MANICURIST is described as an "exciting, original business gift". Attachments shape nails, loosen tight cuticle, remove excess cuticle, eliminate hangnails, stimulate circulation to promote healthy flexible nails, and safely erase corns and calluses from feet, too, maker claims. Price: $29.95.

* * *

TOYS for the scientific-minded child include a miniature Van de Graaff generator that produces 75,000 volts, yet is completely safe due to the small amount of current produced in the sparks. Also there's a "color spectroscope lab", a microscope set and a "light polarizer lab".

* * *

GETTING SMALLER: Japanese firm is selling a six-transistor portable radio that measures 7.9 cm by 6 cm by 2.3 cm and weighs 160 grams. That's the size of a flip-top cigarette box. Cost: Around $20.

* * *

NEW LITERATURE: A 44-page study of fire-resistant construction in modern steel-framed buildings from the **Canadian Institute of Steel Construction,** Toronto. . . . booklet describing home-study courses in production control, time-motion study and incentives and including taped verbal communications available from **Industrial Engineering Services,** U. K. . . . brochure on new sodium zeolite water softener and a new packaged demineralizer from **Cochrane Corp.,** Philadelphia. . . . general products catalogue from **Wolverine Tube, Division of Calumet & Hecla of Canada,** London, Ont.

HOLLAND LIFE INSURANCE SOCIETY Ltd., Toronto, completed its first five years of operation in Canada on Nov. 15. Company has offices in Toronto, Hamilton, Montreal, Vancouver and Edmonton. Business in force amounts to $34 million and annual premium income is estimated at $482,000, over 40% higher than a year ago.

Sales of Gas Keep Soaring

MONTREAL (Staff)—Natural gas sales keep soaring in the Montreal area.

A new record for a 24-hour period was set Nov. 18 when consumption reached 31.8 million cu. ft.

Previous record: 27.7 million cu. ft. Jan. 3, 1959.

The impact of some 11,000 gas heating installations since that date is reflected in the fact that the new record was set with an average temperature of 28 degrees above zero.

Jan. 3 temperature was seven degrees below.

"It is significant," said Leonard Milano, executive vice-president of **Quebec Natural Gas,** "that the Nov. 18 peak was reached without addition of a large amount of new industrial load which has been contracted but is awaiting completion of customers' facilities."

ANNOUNCEMENT

HONEYWELL APPOINTMENT

P. J. LAMARCHE

Phillipe J. Lamarche, former branch manager of Honeywell Controls Limited's Quebec office, has been appointed General Sales Manager of Honeywell's French subsidiary with headquarters in Paris, it has been announced by Honeywell President W. H. Evans. The French subsidiary operates under the direction of the Honeywell International Division in Minneapolis. Mr. Lamarche joined Honeywell in 1950 as a combination Residential and Commercial Division salesman in the Montreal Office. In 1951, he established the company's Quebec office and has been largely instrumental in guiding its growth to its present position. Mr. Lamarche is a native of Montreal who studied engineering at McGill University. He is president of the Quebec City Chapter of the American Society of Heating, Refrigeration and Air Conditioning Engineers and a member of the Quebec branch of the Canadian Manufacturers' Association.

Company Reports

Grain

FEDERAL GRAIN LTD., Winnipeg, consolidated net profit of $1,354,239 for the year ended July 31, 1959, was 15.8% higher than previous year's $1,169,137.

Expenditures for capital equipment for the year totaled $1,396,700. This included construction of country elevator annexes and brings the total owned and operated country elevators to 775 and 921 annexes having a total capacity of 49.9 million bu.

The company's $1 million debentures, due Oct. 19, 1959, were to be paid by the sale of an equal amount of 5½% debentures, due October, 1960.

Advances on farm stored grain amounted to $3,386,919 for the year.

Despite the lack of rain and poor harvesting weather, the total production of grain from the 1959 crop is estimated at 923,560,000 bu.

Lower receipts from country and terminal elevators are anticipated this year, due to slow movement of grain into export markets.

Chairman H. E. Sellers and president H. C. MacGregor report that now initial difficulties have been overcome, the St. Lawrence Seaway will "reduce the cost of moving grain to overseas markets". Grain is now being loaded at the Lakehead directly into ocean-going vessels.

The engineer who lost his interest

Not the interest in his job: he loved building bridges. But he lost the interest his money might have earned if he had only had the time to invest it properly! Then he discovered that Montreal Trust knows as much about building investments as he knows about building bridges.

Now he uses the Montreal Trust Investment Management Service. He gets professional advice, based on experience, research and analysis. Montreal Trust selects securities for growth and income; they look after proxies, rights, and the general construction of his portfolio. And they make sure that he doesn't lose interest or dividends! At income tax time, they even remind him that their moderate charges are deductible for tax purposes.

In addition, Montreal Trust administer a fund they have helped him set up to provide for the future of his children. He has also asked them to plan his estate, and to look after his Consolidated Retirement Savings Plan.

In short: our engineer is happily building bridges. He knows that Montreal Trust are as competent in looking after his financial interests as he is in his field — and he is a very good engineer!

P.S. Why not phone your local Montreal Trust Office and ask for our booklet on TRUST SERVICES. It will give you many new ideas on how Montreal Trust can help *you!*

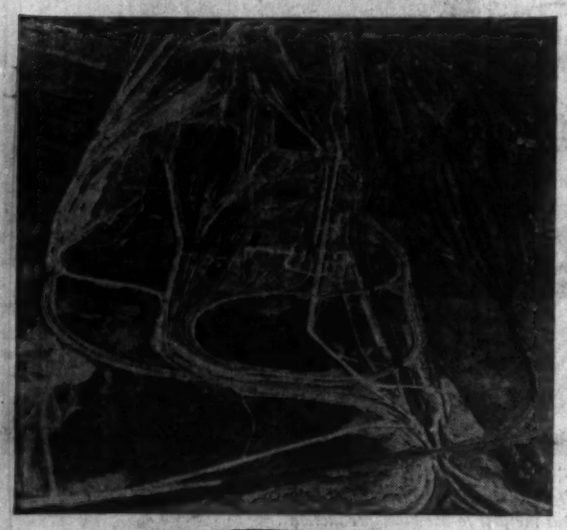
BIG GLASS

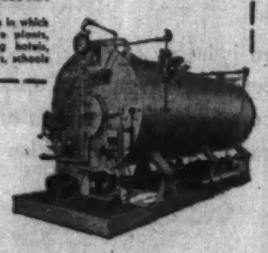
Five plates of ½ in. glass, each 9 ft. wide and 23 ft. high and weighing three-quarters of a ton, have been installed in the new **Bank of Nova Scotia** building, London, Ont. Glass was held by electrically-operated suction cups and lifted into position by a 30-ton crane. Experts of **Pilkington Glass Ltd.**, in charge of the installation, guided plates into position by hand.



PACKAGED POWER* BY VOLCANO

CANADIAN NATIONAL RAILWAYS
Cote de Liesse Yards, Montreal, Quebec.
Plumbing Contractor: Connelly & Twizell Ltd., Montreal.

The new C.N.R. Cote de Liesse Yards, shown in the above aerial photograph, are indicative of the growth of Canadian Transportation since World War II. The new maintenance shops, seen in the center of the photograph, are heated by three 500-H.P. Volcano Starfire high-pressure steam boilers.
This building is among the many important structures in which Volcano boilers have been installed. Included are plants, public utilities and government buildings, leading hotels, office and apartment buildings, universities, colleges, schools and institutions from coast to coast.



- Starfire Automatic Boilers Reduce Costs and Breakdowns
- Combination boiler and oil-or-gas firing unit — 9 H.P. to 500 H.P.
- A complete unit — compact design — easy to install.
- No foundation or large chimney needed (requires only vent pipe to clear surrounding building)—connect to steam, water, fuel and electric lines—and it's ready to operate.
- Economical.

CANADA'S LEADING MANUFACTURER OF AUTOMATIC HEATING EQUIPMENT

Elder Mines Buys Peel Development

Bulldoze $100 million development on site of world-famous Jersey cattle farm . . .

By FORBES GILBERTSON

Several miles of street pattern have already been bulldozed out on the site of a $100-million industrial and residential development on the outskirts of Brampton, Ont.

Construction of the first industrial plants is scheduled to start shortly.

Meanwhile, **Peel Village Developments Ltd.**, sponsor of the project, has become a wholly owned subsidiary of **Elder Mines & Developments Ltd.**

Agreement is subject to approval by a meeting of Elder shareholders Dec. 9. Under the agreement, the three principals of Peel Village Developments will become directors of Elder.

They are:

S. E. Coon, chairman; Charles F. Watson, president and managing director; J. K. Kinsella, secretary-treasurer. The three wil continue in their present capacities with Peel Village Developments.

Located just north of Highway 401 on the southern outskirts of Brampton, the development will consist of: 3,000 single-family dwellings, 1,500 multiple dwellings, parks, schools, community centre and 400 acres of industrial sites. Total: Around 1,100 acres.

First five companies to locate in the development will be: **General Equipment Corp.; Service Dredge Machine Ltd.; Quality Craft Show Case Co.; Tivern Construction** (three plants).

Construction of first 400 homes, multiple dwellings and commercial buildings will follow initial industrial development.

A shopping centre of 50 stores will be erected on a 40-acre site, starting next April. Number can be increased to 75. About 50,000 sq. ft. to 100,000 sq. ft. of commercial office space will be available in the centre, plus parking for 5,000 cars.

A national food chain is ready to locate in the centre, Watson told **FP**.

Some 70% of the space has already been allocated.

A ratio of 30% industrial to 70% commercial and residential will be maintained.

"We're trying to achieve a completely integrated community," Watson says, "which will provide planned living where people can live, work, shop and play."

Strict architectural control of all building will be maintained. Each residential, commercial and industrial lot will have a 30-year deeded restriction.

The property is the former site of the Jersey cattle farm of the famous Bull family.

Price of lots will range from $4,600 to $14,000.

Watson said the company can offer industries land, architectural design, engineering services, construction, or leaseback deals and financing in one package.

Watson, Coon and Kinsella jointly control a number of other building companies which own office buildings in the Toronto area. They act as their own general contractor, retain construction staff and crews, employ a total of around 200 people.

Newest endeavor: Purchase through another subsidiary, **Syd-Co Holdings Ltd.**, of Terminal Tower properties in Hamilton's centre, comprising around 70,000 sq. ft. of property just east of the Connaught Hotel.

Plans are for a 200,000-sq.-ft. shopping centre; one 15-story and one 20-story tower containing total of 350,000 sq. ft.; possibly a 4,500-room hotel.

Architect for Peel Village: **Visvaldis V. Upenieks,** Toronto.

W. J. Gilleland, of **Gilleland & Strutt,** Ottawa, a director of Elder Mines, will be consultant on the Hamilton and Peel Village projects. One of his major efforts: Ottawa municipal airport.

Terms of acquisition of Peel Village Developments by Elder, said K. A. Roberts, president of Elder, was based on an independent appraisal made by H. B. Langer, executive vice-president, **Farlinger & Langer Ltd.**

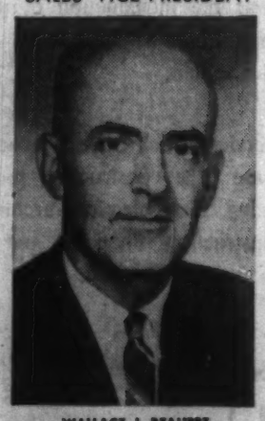
His appraisal, said Roberts, was substantially in excess of the price paid by Elder which was tied into an equity formula.

The newly constituted group will introduce Elder to other land development and building situations besides Peel Village.

At present, Elder has no interest in Syd-Co Holdings or the other holding companies.

ANNOUNCEMENT

DOW KINGSBEER BREWERY SALES VICE-PRESIDENT



WALLACE J. BEAUPRE

who has been appointed vice-president—sales of Dow Kingsbeer Brewery Limited. Mr. Beaupre joined Dow Kingsbeer as Toronto district sales manager in 1956 and was named Ontario sales manager in 1958. A career sales executive, Mr. Beaupre has wide experience in all phases of sales and will make his headquarters in Toronto.

Small Business Group Forms Credit Granting Operation

Another source of credit has been developed for small businesses in the Toronto area.

A charter has been granted to the Toronto chapter of the Canadian Small & Independent Business Federation to operate as a credit union.

The 200-member federation was formed earlier this year — an idea growing out of a management clinic held a year ago in Toronto.

Its immediate objective:

To help pilot members through current difficult period of tight money.

"We intend to overcome the obstacle of present tight money cycle for our members," Federation President Herb Forth says.

Forth heads **H. Forth & Co.,** manufacturing jewelers in Toronto.

The federation has also been active in providing know-how, legal and financial counsel to members.

It has stepped into field of labor relations and is studying ways to provide strength to small business in dealing with labor unions.

"Our aim is to keep the small operator in business and help him grow," Forth says.

To date, only chapter of the federation is in Toronto, but there are members from several other Ontario cities and from Montreal.

Oil Export Up In Puget Sound

December purchase nominations for Alberta crude oil show a healthy boost at 382,237 b/d.

This is up 18.6% from the present month.

Feature of the higher demand is the 21,000 b/d requirements of **Texaco Inc.** for its Anacortes, Wash., refinery.

Up to now this company had only been importing 8,000 b/d for its Puget Sound refinery.

Total export requirements for Alberta crude amount to 63,000 b/d (45,000 b/d to Puget Sound area, 18,200 b/d to U. S. Great Lakes area), up from previous month's 46,500 b/d.

Gale Heads New Brunswick Development

From Our Own Correspondent

FREDERICTON — John R. Gale, director of the overseas and foreign department of **Nesbitt, Thomson & Co.,** Montreal, has been appointed president of the **New Brunswick Development Corp.**

Set up at the last session of the provincial legislature with an organization budget of $50,000, the Crown company will operate autonomously along the lines of Nova Scotia's **Industrial Estates Ltd.**

Directors will include Roger Pichette, Minister of Industry and Development.

An office will be established in Fredericton in charge of a permanent secretary.

New Brunswick Development Corp. will have power to:

- **Promote industrial development** by attracting new industries and rehabilitating existing industries.
- **Carry on any business** of an industrial, commercial or agricultural nature.
- **Hold shares of incorporated companies** capable of enhancing the economic welfare of the province.
- **Furnish credit** for promotion and development of industrial enterprises.

Terms of the act are general, Premier Hugh John Flemming told **FP**, because it is difficult to spell out the problems involved in establishing new industry.

In neighboring Nova Scotia, Industrial Estates has encouraged projects representing capital outlays of more than $3 million and providing employment for nearly 1,000.

Here's why you should advertise in Guelph

White Rose Products are used by many people in Guelph, but a lot more people would try your products and services if they were sold more directly. Last year the people in the Guelph retail trading zone spent over 11 million dollars on automotive products.

Here's how you can get a worthwhile share of this market! All of Guelph reads the Guelph Mercury; they read it for local and world news, and for product information. Like the people in Oshawa and Sarnia and Sudbury community pride makes them much more receptive to the advertising in their own local daily newspaper. So tell them about White Rose products . . . sell them on your services. Do it the only way it can be done really well . . . in their own local newspaper.

All of Guelph reads the Mercury.

Trade Stamps 'Same System' As the Co-Ops?

From Our Own Correspondent

REGINA — A fine of $200 and costs was levied against **Loblaw Groceterias (Sask.) Ltd.** in Moose Jaw city police court last week, following a verdict of guilty on two counts of giving trading stamps.

Notice of appeal has been given.

Both Loblaw and its subsidiary **O.K. Economy Stores** have stopped issuing stamps in the province and advertising signs publicizing the practice are being removed.

On Dec. 15, two Regina **IGA** stores will be tried under sections of the Criminal Code for issuing stamps.

Bruce Codville, Winnipeg, president of **Codville Co.** wholesale supplier for the IGA stores, has said that this chain would continue to distribute stamps in spite of a warning by Saskatchewan's Attorney-General R. A. Walker that police might be stationed in each store to prosecute on every stamp transaction.

Codville also suggested that Saskatchewan's objection to premium stamps could be traced to opposition from co-operative stores.

"After all, we're doing in principle the same thing as the co-ops.

"They offer a stock dividend in merchandise or money, based on the customer's purchases. We offer a dividend in merchandise."

Answering this, Attorney-General Walker said that the Criminal Code outlaws trading stamps, but makes no reference to patronage dividends paid by co-operatives.

"My interest is in enforcing the Criminal Code," he added. "I am not going to try to explain to Mr. Codville what the difference is between co-operatives and IGA stores."

The president of the Co-operative Union of Saskatchewan, L. L. Loyd, Moose Jaw, also replied to Codville.

"A co-operative provides goods to members as economically as possible by returning all savings to members," he said.

"If the IGA stores shared this principle and feeling, then the first thing they should do is drop premium stamps.

"In a co-operative the member and customer is a partner in the business, and all earnings are returned to him according to his purchases."

Some time ago, Magistrate E. L. Elliott, Regina, acquitted two O.K. Economy stores in Regina on the charge of issuing trading stamps contrary to the Criminal Code.

Attorney-General Walker is appealing his judgment.

The crown appeal against the Elliott decision is on three grounds:

- **That the magistrate erred** in law in interpreting four subsections of the Criminal Code.
- **That the decision was unreasonable** and cannot be supported by the evidence.
- **That the evidence** was such that there should have been a conviction.

The defence appeal against the Moose Jaw conviction is also based on grounds of both law and fact.

There are indications that, whatever the outcome of these appeals, the matter will be carried to higher courts and ultimately to the Supreme Court of Canada.

SHOPPING CENTRE

A second Don Mills shopping centre will open next week. Located on eight acres at York Mills Rd., and Ellesmere, the centre will be known as Parkwoods. **James A. Murray** and **Henry Fliess**, both of Toronto, were the architects. Opening comes just 10 months after decision was made to finalize design and proceed with construction, said James E. Kelley, Jr., vice-president and general manager of **Don Mills Development Ltd.** Centre comprises 15 stores and service station.

ANNOUNCEMENT

MELCHERS' DIRECTOR

COL. MAURICE FORGET

At the 31st annual meeting of Melchers' Distilleries, Limited, held recently in Montreal, Col. Maurice Forget was elected to the Board of Directors. Col. Forget is President of Quebec Natural Gas Corporation Limited, Forget & Forget Limitée, Corporation d'Expansion Financiere, and is also a Director of Brown Company, The Canadian Arena Company Limited, International Telephone & Telegraph Company of Canada, and the recently organized Corporation d'Expansion Métropolitaine. He is also Honorary Colonel of the Fusiliers Mont-Royal.

TCA Pilots Hint Strike Over Size of Jet Crews

MONTREAL (Staff) — Labor contract negotiations between **Trans-Canada Air Lines** and its pilots have broken down.

Both sides asked for a conciliator to be appointed.

There is disagreement on both wages and flight conditions for crews in the new DC-8 jets coming into service early next year.

So far both sides have described the talks as "generally friendly in nature". But at midweek a spokesman for Canadian Air Line Pilots' Association told **FP** that TCA will have to yield on wages if it doesn't want a strike on its hands.

Actually CALPA might have a hard time getting the pilots to agree on strike action. They earn high wages now and, while they want more, few are anxious to risk losing much flight pay over any dispute.

In the long run, the problem of jet crews may turn out to be the more difficult to settle. CALPA wants three pilots in each crew. In the U. S. the active, Teamster-affiliated Flight Engineers' Association has held out for two or three pilots and an engineer.

TCA wants just two pilots which it says is the crew the aircraft was designed for. It is training some of its flight engineers to be pilots at the present time.

The first jet flights will be carried out by TCA supervisory pilots. These are executives and not CALPA members. During this time the line will gain practical experience on exactly what crew it will need and might conceivably change its mind about the two-three pilot argument.

LOCOMOTIVE EXPORT

A diesel-hydraulic locomotive has been shipped by **GM Diesel**, London, Ont., for use on the **Sorocabana Railroad** in Brazil. It was the 103rd unit exported. Others have gone to Ceylon, Pakistan, Liberia, Norway, New Zealand and Sweden.

MacNab Sells CPR, Buys Golds, Paper

The manager of the MacNab managed investment account has sold his client's holding in **Canadian Pacific Railway Co.**, and with the proceeds added to his present holdings in two gold mines and a pulp and paper company.

On Nov. 23, the manager sold 100 shares of Canadian Pacific at $24.50 a share which, after deducting commission and transfer tax, netted the account $2,419.

The same day, the manager purchased 10 shares of **McIntyre Porcupine Gold Mines** at $82⅛; 10 shares of **Noranda Mines** at $46.50; and 60 shares of **Powell River Co.** at $17 for a total net outlay, including commission, of $2,333.25.

These purchases increase MacNab's holding in McIntyre Porcupine to 20 shares; in Noranda Mines to 30 shares; and in Powell River to 200 shares.

As a result of the transaction, MacNab's cash balance is increased by $86.75, but his annual income in prospect is reduced by $55 and now stands at $1,646.

A detailed statement and comment on these changes in the MacNab portfolio will appear in the manager's next report.

MUTUAL LIFE OF CANADA APPOINTMENTS

J. W. CHAMBERS, F.S.A. L. M. SPRUNG, F.S.A. B. A. ROGERS

The Mutual Life Assurance Company of Canada has announced several appointments. J. Wilfrid Chambers, F.S.A., and Lyall M. Sprung, F.S.A., have each been appointed Actuary of the Company; and Benson A. Rogers has been appointed Associate Secretary and Legal Officer.

Mr. Chambers joined the Company's actuarial department in 1932, and has been Associate Actuary since 1954. He will continue to devote his main attention to Group operations.

Mr. Sprung has been associated with the Company since 1931, and was appointed Associate Actuary in 1954. His duties relate primarily to Ordinary Insurance operations.

Mr. Rogers joined the Company's legal department in 1939, and was named Legal Officer in 1945. He will continue in this capacity as he assumes new responsibilities as Associate Secretary.

Illustrated by Wes Chapman

Eli Whitney did more than invent the cotton gin. He also developed the first modern machine tools, and in 1798 set up a factory which was the first to use mass production techniques.

100 SYLVANIA FLUORESCENT LAMPS = 108 ORDINARY FLUORESCENT LAMPS

Greatest step forward in fluorescent lighting in years, new Sylvania lamp ratings mean you get a dividend of light equal to *eight extra lamps* for every 100 ordinary lamps you use. Sylvania fluorescent lamps not only deliver greater light output but this increased light is produced with the same wattage. With new Sylvania Fluorescent Lamps, you can be sure of longer lamp life, fewer lamp failures and decreased overhead costs. To learn how leadership in lighting engineering can bring more light at lower cost to your operation, see your Sylvania representative, or write: Sylvania Electric (Canada) Ltd., 6233 Cote de Liesse Road, Montreal 9.

SYLVANIA FLUORESCENT LAMPS

Builders of Progress...

Progress — the successful result of somebody's search for a better answer. In 1798 it was the introduction of mass production. In modern construction it is the Package Plan, as introduced in Canada by our founder, the late Finley W. McLachlan.

He built a service which offers Canadian industry a single, responsible source for every phase of a construction project, from preliminary discussion to a finished building. Site selection, architectural and engineering design, cost estimates, construction, financing and leaseback—the McLachlan Package Plan is tailored to your every need.

If there's a new building or extension in your future, write today for our illustrated brochure on the Package Plan.

How Bank Earnings and Assets Increase

Net profit of the five chartered banks which so far have issued year end statements show year-to-year increases ranging from 9% to 40%. The fiscal years of these banks end Oct. 31.

Biggest gain in assets occurred in National Housing Act mortgages, with addition to holdings ranging from 27% to 52%.

Provincial Bank of Canada reported new records in assets, deposits and profits. Net profit for year amounted to $1,231,038, up 40.7% from $875,043 recorded a year ago.

Provincial's cash assets at year end represented 15.3% of total liabilities to the public (14.5% a year earlier). Liquid assets, excluding N.H.A. mortgages, were 51.7% of such liabilities (55.2%).

Toronto-Dominion Bank net profit at Oct. 31, 1959, amounted to $5,462,929, up 15% from that of a year before.

Its cash assets at Oct. 31 were equivalent to 15% of all deposits (16.7% a year earlier). Total quick assets were equal to 51.7% of liabilities to public (60%).

Bank of Nova Scotia net profit of $5,902,713 was 12.6% higher than previous year's $5,241,477.

Nova Scotia's cash resources at the year end represented 14.8% of public liabilities (15.2% the year before). Quick assets were 42.2% of liabilities to the public (51.9%).

Canadian Bank of Commerce, reported net profit of $11,118,380 in its fiscal year ended Oct. 31, 1959, an increase of 8.9% over $10,212,347 a year earlier.

Cash resources at year end represented 14.6% of public deposit liabilities (18.2% a year earlier). Total quick assets were 53.5% of such liabilities (61.8%).

Below are comparative income accounts and balance sheets for the individual banks that have recently issued year-end statements, including **Imperial Bank of Canada** (FP, Nov. 14).

Truckers Oppose Milk Plan

R. D. Grant, **Overland Express Ltd.**, Woodstock, was re-elected president of the Automotive Transport Association of Ontario at its annual convention in Toronto this week.

Other officers re-elected: C. V. Hoar, **Hoar Transport Co. Ltd.**, Toronto, and H. G. White, **Hanson Transport Co. Ltd.**, Hamilton, vice-presidents; Proctor Dick, **Western Freight Lines, Ltd.**, Chatham, secretary; S. V. Martin, **Strathdee Transport Ltd.**, Toronto, treasurer; and J. O. Goodman, Toronto, general manager.

Resounding opposition to a proposed Ontario marketing plan for fluid milk was voiced by 1,500 delegates to the convention.

The plan, it was reported by J. R. McLeod, manager of the milk transporters' division, would be to set up a marketing board to control purchase, transportation and sale of all fluid milk produced in Ontario.

"This plan means the almost total eclipse of private haulers and their eventual elimination as small businessmen," he said.

Entry of the railways into the trucking field and possible use of railway subsidies to intensify rail-highway competition poses an extreme threat to the trucking industry, said the annual report of R. D. Grant, Woodstock, president.

Quebec Government's 'Basic Position' Same

By JACK McARTHUR

MONTREAL (Staff) — There were no big surprises in Quebec's Throne Speech last week. But it served to underline two things:

- **There has been a distinct change of public approach** by the Sauvé government toward some items in its relations with the federal government.
- **But the basic position of the National Union government may be little altered.**

As it did in the days of the late Premier Duplessis, it wants to protect Quebec's character from the "centralizers" in Ottawa. At least, so it indicated in the Throne Speech.

But it also seemed to leave room for a widening of quiet, reasonable co-operation between Quebec City and Ottawa.

As the Quebec Legislature opened its session it was told the government would propose means to stabilize education finances.

Presumably this will call for some agreement with the federal government about the university grants which have been consistently rejected by Quebec as an invasion of provincial rights.

Significantly, the Throne Speech said there was no constitutional conflict involved in setting up a hospital scheme.

This apparently means that there will be no spat over the setting up of a province-wide government-sponsored federal-provincial hospital plan similar to those in existence in other provinces.

It's not clear when the Quebec plan will start. The province says it must study its hospital characteristics and proceed with caution.

But there seems little doubt now that Quebeckers eventually will be covered by some kind of government-backed plan.

In plotting changes now in educational finance and hospitalization, as well as labor law (FP, Nov. 21), the government of Premier Paul Sauvé may be intent on deflating the opposition Liberals (FP, Sept. 19).

These are prime election issues—and an election is expected next year.

The Liberals now may have trouble trying to whip up votes with arguments about education grants, hospitalization and labor law.

However, the Liberals certainly will say that the government has moved too slowly on these things.

And they will probably say that Quebec has given its resources too easily to companies controlled by "outsiders."

To which the government will reply—as it did in the Throne Speech—that it is a staunch believer in private enterprise as a means of ensuring the prosperity of the province.

In summary:

To those who had an idea that the Sauvé government was moving quickly toward all-out "co-operation" with the federal government and the other provinces, the Throne Speech was probably a disappointment.

To those who hope for a little more flexibility in Ottawa-Quebec relations, it was probably a quite acceptable document.

Atlantic Flights Show 12% Increase

TransAtlantic air passenger traffic was up during the third quarter of this year.

IATA airlines carried 523,030 passengers on Atlantic routes — an increase of 12% over the same period in 1958. Economy class passengers accounted for 78.6% of the total, while 17.3% of the passengers traveled de luxe or first class.

Tourist class traffic declined to 4.1% due to a sharp drop in tourist seating offered on these routes.

Air cargo loads for the third quarter were up 24.5% from the same period last year.

For the first nine months of 1959, IATA airlines carried 49,658,070 lb., compared with 37,061,090 lb. from January to September 1958.

WANT NATIONALIZATION

Saskatchewan Wheat Pool, at its annual meeting in Regina, adopted a resolution asking that Canada's railways be nationalized 'and operated for the benefit of the people."

Union Gas Sales, Profits Up Gains Expected to Continue

In the six months ended Sept. 30, 1959, total revenue of **Union Gas Co. of Canada** was $10,363,000, up 35.3% from the same period last year.

After increased interest and depreciation, net profit was $55,000 (net loss of $253,000 for comparable 1958 period). This amounted to a loss of 4c (6c) per common share, after providing $235,000 dividend on 5½% preferred stock issued in February, 1959.

Gross revenue is at a low point during the six-month period covered, while all costs, except gas sent out, fluctuate very little.

For the 12-month period ended Sept. 30, 1959, net profit amounted to $2,786,000 ($2,008,000 for the 12-month period ended Sept. 30, 1958), equal to 52c (45c) per common share. Company earned 61c per share in the year ended March 31, 1959.

Expansion into new markets as well as the development of existing ones is reflected in the increase in gross sales. It will take a few years of market build-up before the full effect of the expansion program will be felt on sales. Given normal winter weather conditions, President D. P. Rogers anticipates continuing increases in earnings.

During the year ended Sept. 30, 1959, an additional 10,900 meters were added on the lines, bringing the total to 165,600.

Deliveries of Western Canada gas commenced on Oct. 27, 1959. Receipts of summer season gas will continue from **Panhandle Eastern Pipe Line Ltd.** under the 1954 contract.

Six months ended Sept. 30:	1959	1958
	($000)	
Gas sales	8,985	6,587
Add: Other income	1,378	1,071
Less: Oper. expense	7,664	5,770
Interest, etc.	1,441	1,309
Depreciation	1,307	1,113
Add: Income tax credit	104	281
Net profit	55	*253
*Net loss.		

Ontario Steel Products Earnings Increased by 5%

Unaudited net profit of **Ontario Steel Products Co.** for the year ended Sept. 30, 1959, was $451,695 or $1.75 per common share, a 5.4% increase over last year's $428,590 or $1.66 per share.

Earnings do not include a tax reduction due to capital cost allowance of $29,000 or 12c per share in 1959, and $48,000 or 20c per share in 1958.

Depreciation is little changed at $432,848. Working capital at Oct. 1, 1959, was $3,327,060, an increase of $43,750 during the year. Capital expenditure was down to $328,014 from last year's $557,852.

It appears unlikely that the automotive industry will be able to resume full production for some time.

Therefore, says President E. S. Byers, it would be difficult to forecast the effect of these circumstances upon company's first-quarter operations.

Toronto Mortgage Payment Made

A further payment of $15 per share has been made to former shareholders of **Toronto Mortgage Co.**

Payment was made by **Canada Permanent Mortgage Co.**, which purchased all the stock earlier this year (FP, Feb. 14). An interim distribution of $130 per share was made in March.

A final distribution will probably be made to Toronto Mortgage's former shareholders early in 1960, when tax liability has been determined.

Original predictions were that purchase price would total $147-$148 per share.

Pay Fares in U.S. Funds And Save the Difference

One big advantage in the high ride of the Canadian dollar is now being exploited in international air travel.

Since fares for international flights (not to the U. S.) on IATA carriers are quoted in U. S. dollars (at par with Canadian), a traveler can pay in U. S. currency and take advantage of the premium on the Canadian dollar.

For instance:

Return economy class fare, Montreal to London, England is $462.60 (U. S. or Canadian). A Canadian who pays in U. S. funds would at the present time save about $20 on the transaction.

For longer flights or more expensive class of travel, the saving would be greater.

Airlines will not accept the "U. S. equivalent" in Canadian currency. The traveler must pay for his ticket in U. S. funds —cash, draft, travelers cheque etc. He can't just say "Here is $442.60 in Canadian — the equivalent of $462.60 U. S."

U. S. currency may also be used for "pay later" schemes, although the loan from the bank is made for the equivalent in Canadian dollars.

The situation is not new, but it is only recently that airlines have been informing the public of the gimmick. Government regulations forbid advertising this. But travel agents and individuals served at many airline ticket counters are being told about this benefit.

The saving does not apply for air travel in Canada or travel from Canada to U. S. points.

Since approximately $90 million is spent annually in Canada for overseas air travel, this could be one more small factor contributing to the expected softening of the Canadian dollar.

On steamship tickets, a similar advantage is available for sailings or cruises originating in the U. S. but bought in Canada.

OPPORTUNITIES

SWIMMING POOLS
National swimming pool m'f'r will appoint reliable man as franchised dealer in this area. Nat'l advertising support. Above-average income. Small investment, partial financing. Write for brochure. Box FP 1737, 125 W. 41 St., N.Y., N.Y.

MANUFACTURING RIGHTS WANTED
By Machine Tool and Sheet Metal Shop, on royalty basis of production and assembly items either in whole or part pertaining to its trades.
Box 916, The Financial Post, Toronto

Quebec
INDUSTRIAL SALES
Established, responsible manufacturers' agent, broad business experience in marketing to the Quebec industrial field, wishes to contact Canadian companies, interested in active industrial sales representation in Quebec. Business and banking references available. All replies held in strict confidence.
RICHARD I. BARBEAU 8025 DECARIE BLVD, MONTREAL, QUE.

New Brunswick Gets Swiss Loan

From Our Own Correspondent

FREDERICTON — New Brunswick has obtained a $4,350,000 two-year loan in the Swiss market and plans to negotiate a further loan in spring.

The money, 20 million Swiss francs, was obtained from a banking syndicate headed by the **Swiss Credit Bank** and the **Swiss Bank Corp.** Assisting in the arrangements was **Nesbitt, Thomson & Co.,** Montreal.

Plans are to repay this temporary bank credit in spring with half the proceeds of a New Brunswick debenture issue of 40 million Swiss francs, offered through the same banking group.

FOR LEASE

Business Students Meet Leaders to Discuss Jobs

Special Correspondence

LONDON, Ont. — Students at the University of Western Ontario School of Business Administration got an inside look this week at Canadian industry's key jobs.

The London school's 250 business students sat down with 22 leading financial and marketing men, industrialists and industrial relations experts for a day-long round of informal discussions designed to help them select the right employment on graduation.

The annual business forum or job clinic, as it has been called in its dozen years of operation, brought into personal contact with prospective UWO business graduates such men as Peter Hunkin, assistant general manager of the **Canadian Bank of Commerce;** R. J. Lisson, director of personnel, Oakville Plant of the **Ford Motor Co. of Canada;** J. L. Toole, a vice-president of **Canadian National Railways.**

Not a new program, the clinic this year did, however, have a new twist. Included in discussions for the first time were junior students. In the past the forum has been restricted to only those graduating at the end of the current term.

Speakers made no direct job offers and students filed no applications.

Job hunting for students and employee hunting for employers is traditionally confined to the second semester of the term because it is believed to upset classes and student work schedules to an unhealthy degree.

Purpose was to acquaint the student with positions in which he has an interest so that when the time comes for him to select a job he will select the right one, one in which he will be satisfied.

Co-chairmen of the forum, students David Scott and Terry Belsham, said the program content was descriptive of larger industries principally but an attempt had been made to present a balance between large and small companies.

"We hope to be able to acquaint students with the widest possible cross-section of industry and types of employment—marketing versus production versus finance," said Scott.

Speakers met students in the business school's seminar rooms where the Harvard case study methods of business instruction is employed.

The format of the program called for discussion on two levels for students graduating this term from both BA and MBA courses and those not graduating this term.

Company representatives addressing junior students spoke for 15 min. each while graduate students took part in panel discussions with the men from industry. After each hour-long session students were permitted to seek out the speaker representing the employment in which he was interested and, in groups of eight or 10, talked informally.

Areas in business and industry represented by the 22 men were industrial finance, banking, investment, industrial relations, personnel, advertising, market research, sales management, production, purchasing and accounting.

The forum was organized and supervised by MBA students.

Link Private, Public Power In Maritimes

Special Correspondence

HALIFAX — Interconnection of Nova Scotia and New Brunswick power systems will be completed in a few months, providing spare capacity of 150,000 kw (FP, July 18).

The agreement governing operation of the interprovincial grid was signed in Halifax last week by **Nova Scotia Power Commission, New Brunswick Electric Power Commission** and **Nova Scotia Light & Power Co.**

Main link will be a 138,000-volt line carried on giant steel towers between Tufts' Cove at Halifax and Moncton.

The line is being built by NSL & P from Halifax to Onslow, by the N. S. commission from Trenton through Onslow to the New Brunswick border and by the N. B. commission from the border to Moncton.

Total cost: $4 million.

Largest share, FP understands, is being borne by the private company.

Agreement will be administered by a committee, likely the general managers of the three utilities. The committee will determine the daily spinning reserve and supervise routine maintenance.

"The provincially-owned electric systems will be working side by side with an investor-owned utility to study forecasts of the individual utilities and plan the most appropriate action for the good of the whole area," an announcement at the signing said.

Lines, fanning out through existing transmission and distribution facilities, will reach almost every consumer of electricity in Nova Scotia and New Brunswick.

Ontario Will Pay For Safety Ideas

Suggestions for saving lives and preventing accidents on the streets and highways of Ontario can now win cash prizes.

The awards, to be known as the Jack Hammell Highway Safety Suggestion Awards, were announced by Mrs. Hammell in commemoration of the late mining man's interest in traffic safety.

Seventeen prizes of $50 each will be awarded for the best ideas from each of the Ontario Provincial Police districts.

An additional award of $150 goes to the best idea from the entire province.

Suggestions, not to exceed 150 words in length, must be sent to a provincial police district inspector before Dec. 9.

114 Stocks Yield Averages 4.43%

The average yield on 114 dividend-paying stocks on the Toronto Stock Exchange, as compiled by **Moss, Lawson & Co.,** on the prices of Nov. 23 was 4.43%, up .03% from the previous week.

The current yield compares with 4.38% one month ago and 4.19% in the corresponding week last year.

Here is the yield by the various groups:

	Nov. 23	Week Ago	Month Ago	Year Ago
	%	%	%	%
Common	3.98	3.93	3.96	3.84
Pfd. & A.	5.13	5.12	5.17	4.37
Mining	5.34	5.32	5.17	4.93
Banks	3.19	3.21	3.14	3.02

Career Opportunity As A
MANAGEMENT CONSULTANT
For A Man Between 28 and 32

One of our clients seeks a man of the highest calibre and ambition to be trained, through their specially developed courses, as a Management Consultant. After successful completion of the relevant training courses, the man appointed will be required to carry out assignments, under supervision, in at least two of the following areas: Management Accounting, Production Control, Organization Studies, I.D.P., Clerical Work Measurement, Costing and Systems and Procedures. Their consulting work covers a wide field and subsequently there will be further opportunities for training, not necessarily within the areas shown above.
Candidates should be between 28 and 32 years of age and should have the following background and personal qualities:
1. A University and/or professional qualification, preferably in Accounting or Engineering.
2. An understanding of the techniques of controlling industrial operations, backed by some years' experience in one or more of the above areas in an industrial organization.
3. Ability to negotiate with top management.
4. Ability to lead a team and gain the enthusiastic co-operation of colleagues and staff.

This is challenging work and the financial rewards are correspondingly high.
Applications will be treated with the strictest confidence and will be submitted to our client.

Write to: Mr. T. Reid, Paul-Phelan Advertising Limited, 380 Victoria St., Toronto, Ont.

GENERAL MANAGER FOR RESORT HOTEL

THE UNITED NATIONS
RELIEF AND WORKS AGENCY FOR PALESTINE REFUGEES IN THE NEAR EAST

invites applications from qualified and experienced candidates for the following international post vacancies:

TRANSPORT MANAGER
Responsibilities comprise both advisory and executive functions relating to the efficient and economical use of the Agency's transport fleet comprising 400 vehicles with associated plant and facilities; overall supervision of vehicle maintenance; development of vehicle performance standards, and establishment of budget estimates; control and accounting for vehicle spares and stocks. Minimum qualifications acceptable are good general education and technical training in automotive engineering or related fields; at least five years' experience in a responsible position dealing with vehicle maintenance and administration.

VEHICLE MAINTENANCE OFFICER
Responsibilities include direct supervision of maintenance and repair of Agency's fleet in Gaza, comprising 90 vehicles of Renault (buses and trucks) and Land Rover type; operation of maintenance and repair facilities and equipment; establishment and control of maintenance schedules, cost and other records; staff supervision and training. Minimum qualifications acceptable are diploma in automotive engineering, or related fields, and experience in a large scale transport organization.

SUPPLY OFFICER
Responsibilities include indenting for general supplies; compilation of consumption records; movement and storage of basic ration commodities; storage and warehousing of supplies and equipment; supervision and training of staff. Minimum qualifications acceptable are high level of general education and previous experience in an executive position in the supply services of a large organization. Knowledge of supplies and commercial law and mechanized stock accounting on punch cards an advantage.

APPLICATIONS
Qualified candidates should apply in writing to Chief Personnel Division, UNRWA, UNESCO Building, Beirut, Lebanon, clearly designating post vacancy concerned and enclosing brief statements of qualifications, experience and age. Information relating to remuneration and conditions of service will be furnished by mail.

PRODUCTION MANAGER

Toronto company requires a production manager with the following qualifications:

EDUCATION: Graduate Mechanical Engineer or equivalent. Age 30 to 40 preferred.

MANUFACTURING EXPERIENCE: Substantial experience in mass-produced stamped metal products, with knowledge of tools, dies, machinery, processes, layout and operation.

ADMINISTRATIVE EXPERIENCE: Substantial supervisory manufacturing experience, with working knowledge of planning, scheduling, budgeting, cost control, organization and personnel.

This position is a substantial opportunity for an ambitious manufacturing executive to become part of an expanding world-wide organization.

All resumes will be held in confidence and interviews will be arranged with desirable applicants.

'60 Labor Hassle May Stall Seaway

MONTREAL (Staff) — Labor trouble could snarl up next spring's opening of St. Lawrence Seaway navigation.

Talks have broken down between the Seaway Authority and Canadian Brotherhood of Rail, Transport & General Workers over wage increases for some 900 maintenance and operating men. Union negotiators have applied for conciliation.

The union wants increases that it estimates would cost the authority some $250,000 more annually.

The authority refuses any increase right now. It intends holding a wage study to settle suitable rates for maintenance men in the future. This could be a lengthy process.

It will be the first contract negotiated since the canal employees came under the jurisdiction of CBRT.

Seafarers' International Union had made a strong bid to win the men. Most observers saw the SIU move as part of the over-all plan of Teamsters Union boss Jimmy Hoffa to win control of the Seaway through his transport union "federation".

Since then the men have changed status from being direct employees of Department of Transport, to employees of a crown corporation. This, in the union's eyes should shake the men free from the complicated procedures that surround civil service wage demands.

The union wants two things:

- **A flat 10c-an-hour increase across the board.**
- **A leveling of pay rates** that will bring all employees up to the Welland Canal rate—at present the highest.

From organized labor's point of view this is bad timing. With the end of navigation season, there is little real pressure from a strike threat.

However conciliation can be expected to drag on through the winter, possibly leaving strike action for the spring — a time when it could have its biggest effect.

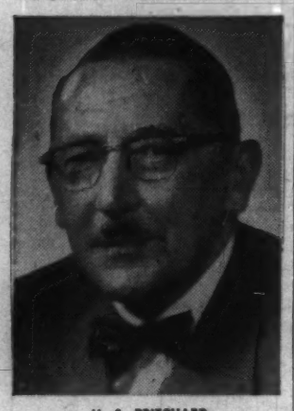
CBRT wants badly to win something for the men. It needs a victory to consolidate its position as a growing labor power in shipping. Eventually it hopes to oust all Teamsters and SIU elements from this field.

For the Seaway Authority it is a difficult problem. Ottawa has stuck to a no-raise policy for the civil service. If the Seaway employees win a big raise in their first major negotiation as employees of a crown corporation, civil servants would complain bitterly.

A strike timed to hit the opening of navigation could be a near-disaster to trade along the route.

ANNOUNCEMENT

DUNLOP APPOINTMENT



H. S. PRITCHARD

The appointment of Mr. H. S. Pritchard as Vice-President New Developments of Dunlop Canada Limited is announced by Mr. G. F. Plummer, Vice-President and General Manager.

Mr. Pritchard brings to this position thirty-two years experience in the manufacture and marketing of Dunlop products. Chamber Backed Hamilton Report

Report and analysis of the city of Hamilton's five-year capital budget by Dr. C. C. Potter of McMaster University in collaboration with **Cliff Hale Ltd.**, (FP, Nov. 21) was sponsored by the Municipal Affairs Committee, Hamilton Chamber of Commerce.

The chamber paid the total cost of the report as a service to the city businessmen and the public.

The report, of interest to other Canadian cities, shows how one major city is handling the problem of financing and planning its capital expansion projects.

Drop in Structural Steel Sales To Cut Profit of Canada Iron

MONTREAL (Staff) — Substantial losses incurred so far this year by the structural steel division are clouding **Canada Iron Foundries'** profit picture.

In a letter being mailed to shareholders at mid-week, President T. F. Rahilly said that while year-end figures were not yet available, over-all results of Canada Iron for 1959 "are not expected to show satisfactory profits".

(In 1958, net profit was $2,454,983 or $2.84 per common share. Company does not publish interim statements.)

At mid-week, Canada Iron was trading at $23, up from its 1959 low of $21½ but still well below the high of $37¾ reached in March. High in 1958 was $37, low $25.

Noting that 1959 operations had been difficult for the company, Rahilly said it was now evident that company's structural steel division would show substantial losses in 1959.

"Early in the year we forecast a small loss, but in completing projects taken at competitive prices during 1958, much larger losses have occurred," Rahilly said.

Among the reasons for the losses are low sale prices on structural steel as well as "development of new lines such as industrial cranes, roof decks and wall panels".

Rahilly said steps had been taken to correct this adverse situation as quickly as possible.

These include a reorganization of top-level personnel at **Dominion Structural Steel Ltd.** (a Canada Iron subsidiary) now in progress, FP understands.

Rahilly indicated that the British Columbia and Alberta plants of the structural steel division, although hindered by low, competitive sales prices, are expected to show small earnings in 1959.

All other segments of the Canada Iron group, including the foundry division, are expected to show a modest increase in net profit this year compared with 1958.

Cdn. Devonian Income Declines

Canadian Devonian Petroleums Ltd. net income for the six month period ended Sept. 30, 1959, after operating, general and administrative expenses but before write-offs, was $943,286.

Gross production income for the period at $1,469,181 was down 11% from same period last year.

This reflected the 17c bbl. reduction in price of crude oil, effective April 1 this year, and an unforeseen reduction in company's production during June and July.

The successful results of the pilot waterflood test in the Steelman Field have established that the amount of ultimate recoverable oil which would be obtained by primary methods will be more than doubled by waterflooding.

Water injection commenced Aug. 28 on a nine-section block near the centre of the Steelman Field.

The field operators are proceeding with unitization in preparation for extending the waterflood throughout the field.

Total oil production in the six month period was 678,852 bbl., a 5% drop from same period last year.

The production drop was caused primarily by pipeline construction east of Cromer, Man.

Who Really Won Italian Air Pact?

MONTREAL (Staff) — Canadian airmen are still trying to name the winner in last week's Canada-Italy bilateral air agreement.

For **Canadian Pacific Airlines** the news that it had been designated as Canadian carrier into Rome, via Madrid, was good.

For **Trans-Canada Airlines** which had been trying for over 10 years to get into Rome it was a severe disappointment.

In TCA's eyes it has lost a lot more than just Rome.

Under the agreement, **Alitalia** — the Italian overseas flag carrier — gets traffic rights between Montreal-Chicago, Montreal-Los Angeles and Montreal-Mexico City.

The Mexico run will cut into CPA's business to some degree, but TCA stands to lose more.

Since Alitalia is a member of **Air Union** — which also includes **Lufthansa, Sabena** and **Air France** — the new agreement gives the union an important new piece of European-U.S.-West Coast business.

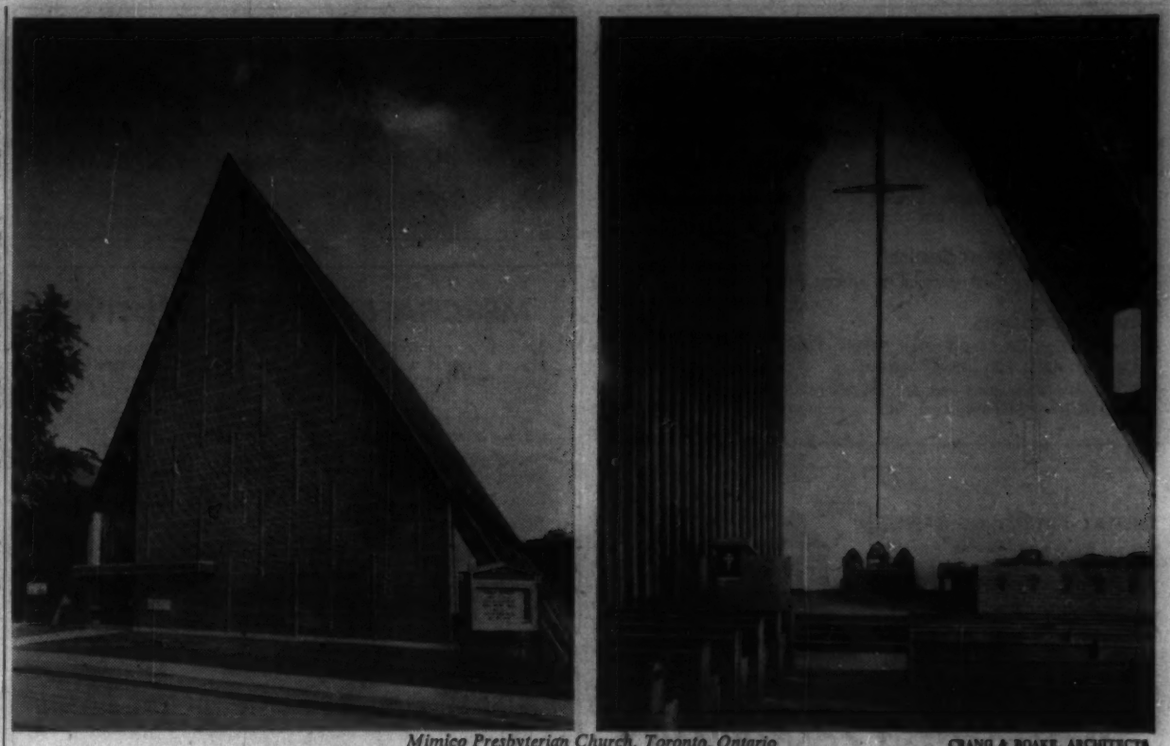
Since Lufthansa and Air France already have Montreal-Chicago rights, Air Union will now have almost daily flights along the route.

One bright spot for TCA: Under the agreement there is allowance for a later Paris-Rome service that would presumably go to TCA.

Discussions between Italy and Canada had frequently faltered over the Italian request for traffic rights between London and Montreal. This the Italians finally abandoned and the way was open for agreement.

The way is also clear for CPA to push on with its planned around-the-world service, linking present Atlantic and Pacific services. Rome was essential.

Initially CPA will serve Rome with two Britannia turbo prop flights weekly starting March 1. Alitalia will use piston-engined DC-7Cs.



Mimico Presbyterian Church, Toronto, Ontario CRANG & BOAKE, ARCHITECTS

CONTROLLED COST — CONTROLLED QUALITY

This church was built to order . . .

The new Mimico Presbyterian Church is Canada's first church to be built by the package construction method.

Camston Limited was called in by the building committee to assist in planning. Camston retained an architect and engineers, and submitted several alternative sketch plans with fixed price quotations.

Economies and changes were made until the committee was fully satisfied it had the ideal plan at the desired price — all without obligation. Only then was a fixed price contract entered into with Camston, and the church was built for that price, with no extras, no skimping.

In churches, as in industry, the Camston method of package construction gives you the most building for the least money.

What Executives Expect in 1960

(FP Outlook Survey of 1960 vs. 1959)

SALES: Do you expect sales of your company during the next year to	70% increase	20% stay about the same	6% decrease
PRICES: Do you expect the price of your product will over the next six months	23% increase	72% stay about the same	4% decrease
COSTS: Do you expect the cost of materials you use will	32% increase	59% stay about the same	4% decrease
LABOR: Will employment in your company over the next year	27% increase	61% stay about the same	10% decrease
WAGES: Will your wage rate over the coming year	74% increase	23% stay about the same	1% decrease
PROFIT: During 1960 will your after-tax net profit	52% increase	23% stay about the same	14% decrease
SPENDING: Will capital spending done by your company next year	33% increase	35% stay about the same	27% decrease

Figures are expressed as percentage of replies

Not all lines add up to 100% because executives making no estimates are not included.

How Firms Will Have Fared in 1959

(Estimates for full year 1959 vs. 1958)

SALES: Did sales made by your company in 1959	73% increase	18% stay about the same	6% decrease
PRICES: Did the price of your product during the current year	20% increase	68% stay about the same	10% decrease
COSTS: Did the cost of materials used by your company	32% increase	56% stay about the same	8% decrease
LABOR: Did employment in your company during 1959	34% increase	50% stay about the same	15% decrease
WAGES: Did wage rates paid by your company during 1959	85% increase	14% stay about the same	1% decrease
PROFIT: Did your company's after-tax profit in 1959	47% increase	19% stay about the same	24% decrease
SPENDING: Did capital spending by your company during the current year	42% increase	25% stay about the same	30% decrease

Figures are expressed as percentage of replies

Not all lines add up to 100% because executives making no estimates are not included.

1960 Outlook: Record Year for Many

Rising sales, better profits and, for many companies, a record year.

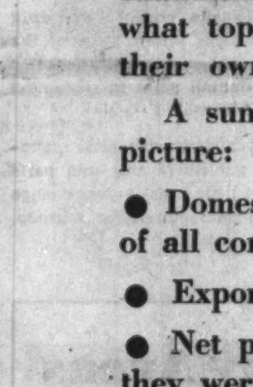
That's the over-all outlook for manufacturing and merchandising based on an FP industry-by-industry survey of what top executives in Canada's leading firms expect for their own companies in 1960.

A summary of executives' opinions gives this composite picture:

- **Domestic sales will be up in 1960 for nearly three out of four of all companies, will hold their own for most others.**
- **Exports will show sturdy year-to-year gains.**
- **Net profits for over half of all firms will be higher than they were this year, will remain steady for nearly two thirds of the remainder.**
- **Prices will be stable in three quarters of all firms, rise moderately for most of the rest.**
- **Wages are likely to be up at least 3%, say three out of four executives.**
- **Over-all spending on new facilities will show a modest year-to-year gain.**

Mining

Executives in Canadian mining companies are optimistic about the outlook for 1960. Nearly half of those replying to FP's survey anticipate sales gains next year; in domestic sales, about 14% expect year-to-year increases of 10%-plus; 28% anticipate 3%-10% increases. The remainder think sales will be as good as in 1959.



Export sales will improve, say a majority of officials. Gains of more than 10% are expected by 33% of firms, while smaller increases are forecast by 22%. About 23% expect to sell about as much abroad as in 1959. (Remainder made no predictions.)

These estimates are in line with mid-1959 forecasts which indicated that 1960 year-to-year sales gains would not be as pronounced as in 1959. (Over 50% of companies expect 1959 sales will be up 10% or more over 1958 and about 15% look for smaller increases.)

Profit expectations: Better than 50% of firms expect bigger profits next year. Of these, 22% are aiming for year-to-year gains of more than 10%; 33% hope to lift earnings between 3% and 10.% Little change is expected by 22% while remainder predict moderate declines.

Wage rates will rise between 3% and 10% next year, say 45% of companies; 55% expect wages to remain at 1959 levels. Total employment in mines will probably rise next year. Work forces of about 56% of companies will be about the same as in 1959, but two out of three of the remainder will add employees.

Other industry trends: **price of products sold will remain stable,** two thirds of officials say; remaining one third expects to increase prices moderately. **Over-all spending on new facilities** will be little changed from 1959; increased spending planned by some will be offset by reductions in other companies.

Oil

Outlook in the oil industry is brightening. **Four out of every five executives answering the FP survey of primary producers, refiners and distributors expect their 1960 sales to ride 3%-10% above 1959 levels.**

This is in line with the more optimistic expectations of those who made mid-year estimates of their 1960 sales. And it marks distinct improvement over 1959 experience when 56% recorded year-to-year gains, mostly moderate, while sales of 34% were "about the same as in 1958" and 10% reported modest declines from 1958 totals.

Profit prospects for 1960 are even brighter than the sales outlook. In half of all companies reporting, it's expected that 1960 net profit will be at least 10% higher. Of the other half, two thirds expect a 3%-10% advance and the remainder say as good as in 1959.

Oil product prices appear likely to remain fairly stable through next year. Some 78% of companies predict that they will be making no change from 1959. Among the remaining minority, those expecting to be changing higher prices just about offset those anticipating lower prices.

Other highlights? Oil industry **labor force likely to be static;** opinion split fairly evenly on whether or not wages will hold the line or advance slightly; **capital spending on new facilities expected to level off, perhaps even dip slightly.**

Although the prices of many oil products slipped during 1959 and the world-wide over-supply of oil overhung the Canadian market, the Canadian industry is closing its books on a satisfactory year.

In 1959, over half of all companies chalked up a 10%-plus gain in net profits; 21% registered a 3%-10% advance and among the remaining one firm in four, most earned about as much as a year before.

Iron & Steel

Sales next year will continue the upward trend which began in the second half of 1958, say most primary producers and fabricators of iron and steel.

Exactly half of all executives reporting in this industry look for a 3%-10% increase in domestic sales over 1959; 15% expect gains of 10% or better. About 19% think sales will be about the same as in 1959 and remaining 15% foresee year-to-year decreases.

Export sales too will improve next year. Of those companies selling abroad, more than half expect higher sales; remainder see little change.

This confirms mid-year forecasts made for FP which indicated the rising-sales pattern would continue into 1960.

Sales in 1959 were higher than 1958's in 61% of companies replying; 27% said sales showed little year-to-year change and the remaining minority reported declines.

Buoyant sales will be reflected in 1960 earnings. Over 60% of executives reporting expect their 1960 profit will be higher than 1959 — with half of these looking for 10%-plus gains and the other half anticipating smaller increases. Another 11% say profits will be about the same, 12% predict lower earnings (15% made no estimates).

Other trends in the iron and steel industry:

Prices of iron and steel products will show little change from 1959 levels in over half of the firms surveyed; remainder expect 3%-10% price increases. **Employment** will rise in nearly 40% of firms, 42% will keep work forces at present levels and 16% will cut back the number of employees. However, nearly 85% expect **wage hikes** of 3%-10%. Remainder hope to hold the line on wages.

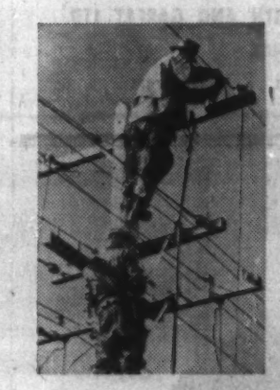
More capital spending will be done next year by 38% of iron and steel firms. Another 31% will spend about the same as in 1959; most of the others will reduce expenditures.

Public Utilities

All public utilities polled by FP expect the rising demand for their services will continue in 1960.

Revenues were higher for all companies in 1959 compared with 1958, will show further gains next year. One in four firms says sales will be up more than 10%, remainder look for smaller year-to-year gains.

Sales expectations are very similar to those made at mid-1959 when 3%-10% increases were forecast for 1960 by 60% of companies, even bigger gains by 27%.



Of the executives who made earnings forecasts for 1960, about 10% expect their profits will rise more than 10% over 1959. Another 55% look for gains between 3% and 10%. Remainder say profits will be about the same or lower.

Year-to-year profit gains in 1959: 31% of firms up more than 10%; 25% will have smaller increases; 6% will be about the same and 19% will report lower earnings (19% made no estimates).

Wage rates, up 3%-10% over 1958 for all companies this year, will move higher for 51% of firms in 1960, officials predict. Remainder expect rates to stay at 1959 levels. **Total employment** will remain relatively stable. Additions in some companies will be offset by cut-backs elsewhere.

Prices: Cost to the consumer of utility services will remain near 1959 levels, say almost all companies. Only 40% report year-to-year price increases in 1959, reflecting higher rates.

Expansion of utilities will continue next year if capital spending plans are realized. About 45% of executives say they will spend more in 1960 than they did this year; a further 19% expect to match 1959 expenditures.

Merchandising

Outlook for 1960: Good gains for sales; marked improvement in most companies' profits.

This follows a year when sales advanced fairly substantially over 1958 totals — although year-to-year gains in profits didn't keep pace.

On average, nine out of 10 merchandisers expect next year's sales to be better than this year's — with most of these companies looking for advances ranging between 3% and 10%. Remainder foresee no year-to-year change.

Year-to-year sales gains this year were comparable: At least eight out of 10 firms will turn in advances, in many cases, very substantial advances, while the remaining minority will do about as well as they did in 1958.

Profit expectations are buoyant: 21% of companies look for a more-than-10% gain in 1960; 32% expect a 3%-10% advance; 31% anticipate no change from 1958; remaining 16% look for a small decline, or else didn't make any estimates at all.

Those expectations provide a bright contrast to 1959 profit experience. Over-all in the industry, profits advanced only

1960 Outlook: Record Year for Many

(CONTINUED FROM PAGE 23)

slightly with gains in some areas offsetting losses in others.

Other expectations for 1960:

Employment in the industry should increase appreciably — over half of all firms expect to add to staff, to some extent anyway, during 1960. (Employment advanced moderately in 1959, too.)

Prices of most products sold by merchandisers should hold relatively stable, if current industry expectations are borne out. About nine out of 10 firms say they plan no price changes. Remaining one in 10 expects to be charging 3%-10% more. (Prices in 1959 were relatively static in over two thirds of all firms; up in the remaining third.)

Wage rates: Up 3%-10% in 80% of firms next year, steady in the other 20%.

Capital spending: Up slightly from 1959 totals, although there will be wide variations in different areas and sectors of the industry.

Construction

For the construction industry as a whole, 1960 promises to be a good year. Sales will be equal to or better than 1959 but higher wage rates will play a part in keeping profits at or below 1959 levels in most firms.

Here is a breakdown of executive opinion about 1960:

For 38% of companies reporting, sales will be 3%-10% higher than in 1959, while 50% expect little change. Remaining few look for moderate declines. These forecasts are in line with mid-1959 predictions for next year.

Profit expectations are not quite as optimistic. Only 12% look for a 3%-10% year-to-year earnings increase in 1960; 38% think profits will be about the same and 25% expect a decline. (No estimates were made by 25%.)

Other highlights:

Wage rates for almost two thirds of reporting firms will rise between 3% and 10% next year. The other third expects little change. The anticipated year-to-year increase will not be quite as large as in the current year which saw wages higher than in 1958 for 87% of firms, with only 13% holding the line.

Employment in the industry will be stable in 1960. Three out of four firms expect little change from 1959. Larger work forces in some companies will be offset by declines elsewhere.

Price of products sold by almost all construction firms is likely to remain relatively unchanged in 1960. **Cost of materials bought** will rise 3%-10% for about one third, hold steady for other two thirds.

Food

Food company executives generally are optimistic about the outlook for next year. **For the industry as a whole, sales and profits will be higher, although year-to-year gains won't be as marked as in 1959.**

Sales increases of 3%-10% are predicted for 1960 by 56% of companies surveyed by FP. Of the remainder, 31% foresee little change, 13% expect sales to be lower than in 1959. These estimates confirm mid-1959 forecasts about 1960.

Company officials expect final 1959 results will show better-than 10% year-to-year sales increases for 12% of firms, 3%-10% gains for 62%. About 18% of the companies see little change in sales from 1958 and 6% expect slight decreases.

Bigger profits are anticipated for 1960 by 37% of companies replying; half of these look for 10%-plus increases. Of the remainder who made predictions, 19% expect 1960 profits will be about the same as in 1959 and 32% say earnings will decline. (12% made no estimate).

This continues the pattern established in 1959: Half of the food firms surveyed say this year's profit will be better than 1958; remainder will show little change or small declines.

Food prices will be about the same next year according to about 44% of firms. But 31% say product prices will rise 3%-10%. Only 19% expect prices will drop.

Employment will be about the same next year. Three out of four companies plan little or no change. Remainder are divided equally between those expecting higher labor requirements and those predicting cutbacks.

However, nearly 75% of executives say wage rates will rise further next year. (All companies replying said wages were up 3%-10% this year compared with 1958.) Only 25% expect to hold the line in wages during 1960.

Textiles

Nearly all textile industry executives replying to FP's survey predict that 1960, if not better than, will be at least as good a year as 1959.

This is how officials forecast 1960 sales trends: 17% expect better-than 10% gains, 25% are looking for smaller increases. Little year-to-year change is anticipated by 50% and only 8% think sales will be below 1959 levels.

These predictions bear out mid-1959 forecasts for 1960 and indicate that the current year's uptrend in sales will continue at a slightly slower rate.

Estimates of 1959 results place sales up more than 10% over 1958 by 33% of companies, up 3%-10% for 42% and about the same for 17%.

Profit expectations are generally bright: of 41% of firms looking for higher earnings next year, 8% expect 10%-plus increases. Little change is foreseen by 42%, but 17% expect earnings will drop more than 10% below 1959.

Estimated profit gains in 1959 follow predicted year-to-year sales increases — 33% of firms expect to earn better-than 10% more than in 1958, 17% look for smaller increases. Remainder are divided equally between those expecting little change and those predicting declines.

Wage rates, up 3%-10% in 1959, will show a similar year-to-year increase in 1960, say 75% of company officials. Remaining 25% expect to hold wages at 1959 levels. **Employment** in the industry as a whole will be about the same — some firms plan to increase their work force, others predict lower labor requirements.

Prices of textile goods will generally maintain 1959 levels although about one in four firms looks for increases. Total capital spending in the industry next year will be close to 1959 spending (which for over half the firms reporting was more than 10% greater than in 1958).

Pulp & Paper

Pulp and paper executives expect steady, sturdy improvement in sales and profits throughout 1960.

Two thirds of all firms look for a 3%-10% advance in sales in Canada and abroad. At least 10% of companies anticipate a sales gain of more than 10%. Remainder are counting on doing as well as in 1959.

This comes after a year of good increases: Sales were up more than 10% this year in about one third of all firms; up 3%-10% in another third; unchanged or down slightly in the remainder.

Profit outlook is comparably bright: A 10%-plus advance is expected by one third of firms, a 3%-10% increase by another third; little change in most of the remainder. (Profits were up reasonably substantially in about half of all firms in 1959; steady or down in the remainder.)

Other highlights:

Number of workers employed by the industry will rise only very slightly next year. Four in five firms expect no major additions to or subtractions from their payrolls; remaining one in five will expand its labor force by 3%-10%.

Wage rates: Up 3%-10% in 70% of firms; steady in remainder. Similar increases took place in 1959 in two thirds of all firms while there was no change in rates in the remaining one third.

Prices of products bought and sold by member firms in this industry likely to remain little changed next year, say eight out of 10 firms.

Capital outlays on new facilities: Up slightly when the diverging trends within the industry cancel each other out.

Beverages

Beverage manufacturers are almost unanimous in expecting higher sales and earnings in 1960. This continues the series of buoyant forecasts made by the industry for several years past.

Some 17% of six firms surveyed predict 1960 sales will be up more than 10% over 1959's while the remainder look for 3%-10% increases. This confirms mid-1959 forecasts when almost all executives said 1960 sales would be higher than this year.

Year-to-year sales gains won't be as large as in 1959, though. Two thirds of the companies will finish this year better than 10% ahead of 1958, with one third showing smaller gains. However, 1958 sales and profits of some companies were affected by a brewing industry strike.

Officials are equally optimistic about 1960 profits. Increases of more than 10% are predicted by 33% while 50% expect gains of at least 3%. Remaining 17% foresee little year-to-year change in earnings.

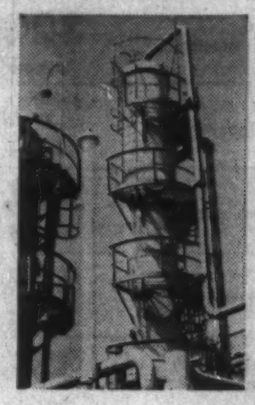
Results for 1959 will likely show two thirds of firms with bigger profits than in 1958, with the balance either the same or slightly lower.

All companies surveyed expect prices they will charge for their products next year and the cost of their materials will be about the same as in 1959. **Employment** in the industry, almost unchanged this year from 1958, will probably stay at present levels throughout 1960.

Wage rates will be 3%-10% higher next year, say five out of every six firms. Remaining one in five expects no change from 1959 rates.

Miscellaneous

Three of every four chemical, drug, rubber and tobacco companies, aircraft manufacturers and other firms making up the miscellaneous category expect domestic sales in 1960 will be higher than this year.



About 13% say next year's sales will show better-than 10% year-to-year gains; 60% look for 3%-10% increases. Little change is expected by 13% and remainder predict a decline in sales.

This is an improvement over mid-1959 forecasts when 10% of manufacturers thought 1960 sales would be up more than 10% and 53% expected smaller increases.

Final results for 1959 will likely show nearly 75% of companies surveyed have improved on 1958 sales with 30% posting 10%-plus gains. A further 17% will show little change from last year; remainder will be down.

Of the companies selling abroad, almost 50% expect to increase sales over 1959 levels. About 35% think exports will be about the same and the balance predict declines.

Profits will be higher in 1960 for 43% of companies reporting (30% look for more than 10% gains over 1959). "About the same" is the forecast of 23% of executives while 24% think earnings will be lower than in 1959. (10% made no estimates.)

Other highlights:

Product prices, relatively stable in 1959 for the group as a whole, will stay at present levels next year for most companies although one third expect to raise their prices.

Wage rates will rise at least 3% over 1959, say 80% of executives (about the same number experienced a similar year-to-year increase in 1959). Only 17% think wages will remain at 1959 levels next year. **Employment** will be up 3%-10% for 30% of firms, will remain steady for 53%. Remainder expect to have fewer employees in 1960 than this year.

Here's the outlook for some industries: chemical and drug companies' sales and profit expectations follow those of the miscellaneous group closely. Most rubber companies look for moderate, and in some cases, substantial gains in sales next year. Profits, too, will be up for most.

Expecting sales' gains are tobacco companies, glass manufacturers, business form makers, publishers and auto parts suppliers, but most of these predict little year-to-year change in earnings. Outlook for aircraft manufacturers, as a group, appears less optimistic.

Prospect by Areas

Here is a breakdown by regions showing how polled businessmen compare the 1960 outlook for some key phases of their operations with their 1959 record. Figures are percentages of executives reporting.

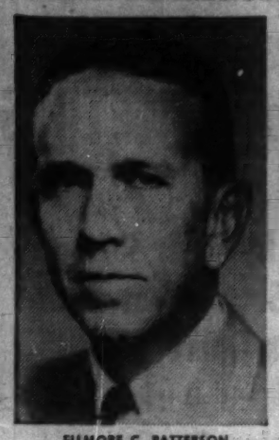
ANNOUNCEMENT

CANADA LIFE DIRECTOR



ELLMORE C. PATTERSON

Ellmore C. Patterson of New York City has been elected to the Board of Directors of The Canada Life Assurance Company.

Mr. Patterson is a Senior Vice President of the Morgan Guaranty Trust Company of New York. He is a Director of The International Nickel Company of Canada, Limited and is active in a number of public welfare organizations.

URANIUM MEET

Ontario government will sponsor a conference on the future of uranium and atomic energy in Canada, in Toronto, Jan. 11 to 13. It is expected to draw 500 delegates.

A WORD TO CANADIAN BUSINESS MEN

Are you thinking of opening up a branch business in Europe? If so, please consult me. I can guide and advise you. I am a Canadian Professional Engineer of wide experience, registered in Ontario, resident in Switzerland in the heart of Europe, and am familiar with European industry.

D. HEPBURN, P.Eng.
26 Zwingerstrasse,
Basel, Switzerland

Among 'Tax Haven' Countries Canada is a Minor Leaguer

By JOHN G. McDONALD, LL.M.
McCarthy & McCarthy, Toronto

THERE was some fuss in Parliament last spring about becoming a "tax haven", which is supposedly a bad thing because of the large amounts of foreign capital that might make a home here.

We observed at the time that Canada has nothing to fear. It is hopelessly outclassed by other countries which actively encourage foreign capital investment by granting tax concessions.

This year, for example, Israel amended her **Encouragement of Capital Investments Law, 1950** to provide for:

- **A flat rate (28%) corporate profits tax** for the first five years in an approved enterprise.
- **No withholding tax** on dividends to foreign shareholders.
- **Top rate of tax** on approved investment income in Israel of 25%.
- **A new resident of Israel is exempt** for seven years on all income earned abroad.
- **Double depreciation** for five years in new industries.
- **Wide total exemptions** from customs, excise and purchase tax on goods used in approved enterprises.
- **Local investments in new industry** and almost all forms of foreign investment are free from estate tax.

Sum for Services Is Taxable Income

The recent decision of the Supreme Court of Canada in **Curran v. Minister of National Revenue** settles the "hiring bonus" question in favor of the Revenue.

For some time prior to 1950, it had been argued that because a contract to supply goods is a capital asset, the proceeds of sale of which are not taxable, a contract to enter into employment should be similarly treated.

The Income Tax Act was amended late in 1949 to make it clear that an amount received as consideration for a covenant to render future services as an employee is taxable as income from employment.

The Supreme Court decision in Curran's case indicates that, apart from the special statutory provision, such an amount referable to personal services is taxable.

This means that a lump sum received in exchange for an agreement to render services of any kind is taxable.

It is not necessary that the payee covenant to become an employee. Tax is probably exigible when he merely agrees to render services as an independent contractor.

Pension Society Is Ruled Taxable

In **Woodward's Pension Society v. Minister of National Revenue**, the Exchequer Court held that a society formed for the purpose of "providing funds" for the payment of pensions to retired employees of affiliated companies was not exempt from tax.

The Society (incorporated under British Columbia law) has claimed that it was organized "exclusively for a (non-profit) purpose", but the court observed that it had to make a profit from its operations in order to "provide funds" for pension payments, and was therefore taxable on profits earned.

The Woodward's plan involved the purchase of shares from the late Charles Woodward for sale to employees at par. Eligible employees purchased stock on a time-payment plan, paying interest at 4%. The Pension Society paid 3% on its indebtedness to the Woodward family, and was taxed on the marginal profit.

The plan reminds us of the so-called "Paramount Pictures" scheme which was considered but never adopted by that company in the U. S.

Paramount proposed the incorporation of a company that would borrow money from Paramount in order to buy Paramount stock in the open market. The borrowing company was to be owned by Paramount employees, who would thus be enabled to secure ultimate capital gains from appreciation in value of Paramount stock.

Woodward's plan is not as attractive as the Paramount scheme because the Pension Society retained — and exercised — the option to repurchase stock from each employee upon his death or retirement.

Don't Overspend Expense Allowance

Employees who are reimbursed for expenses incurred in the performance of their duties are not entitled to deduct any excess payments made from their own pockets.

This rule was reaffirmed recently by the Tax Appeal Board in **Beaver v. Minister of National Revenue.**

It seems that Mr. Beaver spent $5,000 more than the amount allowed to him by his employer.

Mr. Boisvert commented, for the Board: **"Who can possibly be in a better position than the employer to judge the reasonableness of an expenditure?"**

The Board also issued the timely warning that "expenses incurred for Christmas gifts, entertaining and promotion expenses are not deductible" if they exceed a reasonable amount.

A & P Supermart Opens in Calgary

From Our Own Correspondent

CALGARY—**Atlantic & Pacific Tea Co.** opened its first supermarket here last week.

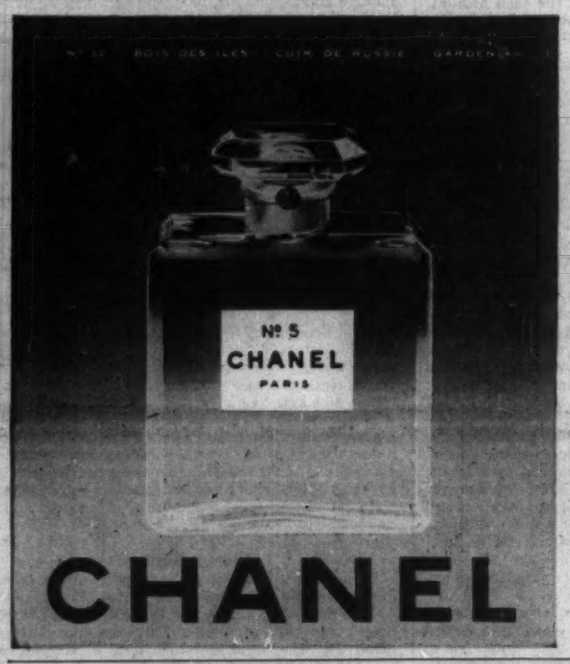
Lawrence W. Beebe, A & P vice-president, says the Calgary store is the company's largest in Canada.

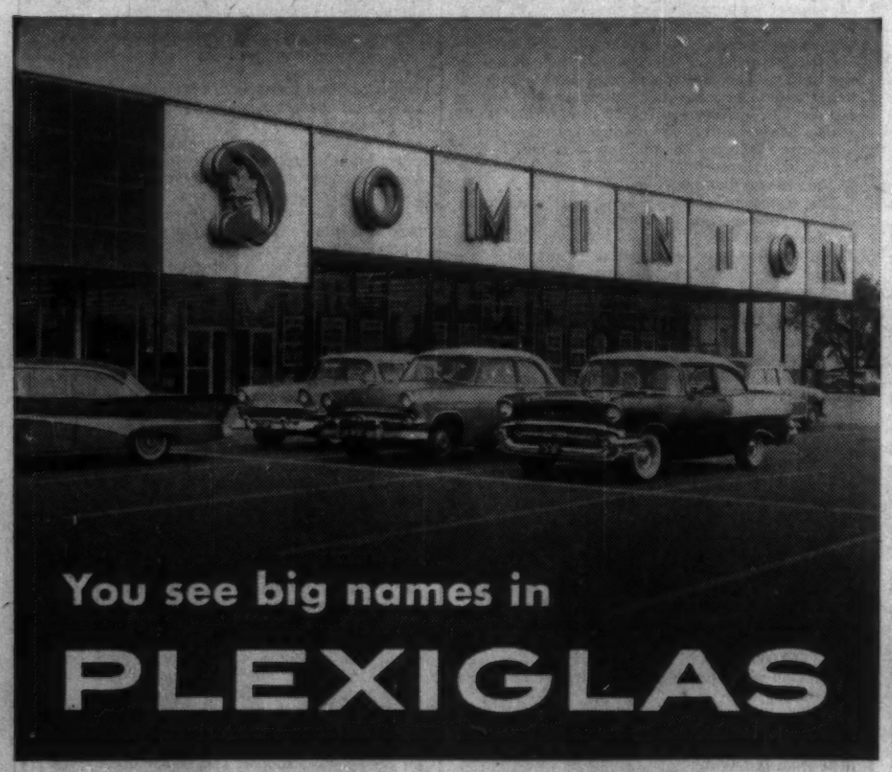
A & P's move here brings to five the number of big grocery chains in Calgary. **Jenkins Groceteria** has 24 stores, **Canada Safeway**, 21, **Loblaw**, five and **Dominion Stores**, three.

Woodward's Stores of Vancouver also has a supermarket under construction here, expected to open for business early in 1960.

The A & P store is located in Macleod Trail area in southwest suburban Calgary.

The company plans nine more stores in Alberta, three of them in Calgary.





PLEXIGLAS letters 8' 6" and 5' 6" high identify and command attention to this new Dominion Supermarket. Lighting inside the letters provides complete luminosity at night. Dominion Store sign, design and manufacture by Neon Products of Canada Ltd.

First used in 1951, now on over 200 Dominion Stores; PLEXIGLAS letters catch the eye and invite business.

Often competing for attention in the most modern shopping plazas, PLEXIGLAS signs are attractive in appearance, colourful and legible. To the public they signify locations that are clean, modern and "a good place to do business". This is why leading merchandisers in many fields adopt sign programs based on PLEXIGLAS.

Whether the sign is small or large, here's the unbeatable combination of advantages you get with PLEXIGLAS: clean, colourful appearance, excellent legibility, complete luminosity at night, resistance to weather and breakage, minimum maintenance.

Send for this new full color brochure, "PLEXIGLAS for SIGNS". It tells how PLEXIGLAS has brought about new concepts of sign appearance and performance.

PLEXIGLAS is a trademark, Reg. Canadian Pat. Off. and in principal foreign countries.

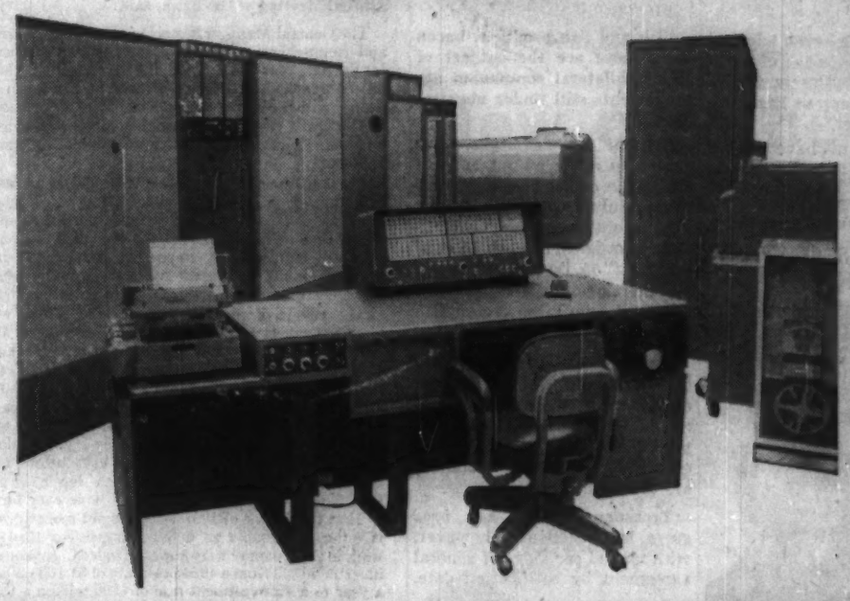
BURROUGHS NEW ELECTRONIC COMPUTER CENTRE



IN OTTAWA TO SERVE ORGANIZATIONS ACROSS CANADA

Now! Put the unmatched speed, accuracy and efficiency of Burroughs sophisticated computer systems to work on your toughest, most time-consuming accounting and data processing problems.

Even *small* businesses can get the *big* business benefits of Burroughs advanced E 101 and 205 computer systems. Accounting, statistical or scientific problems—these top-flight Burroughs computers will solve them all on a service bureau basis at the brand-new computer centre in our Ottawa branch.

At peak speeds and efficiency, with customary Burroughs accuracy, both the E 101 and the 205 will process punched card or punched paper tape and give you results in the same media or in tabulated form.

Whenever you need them to handle a predictable recurring work load on a regular contractual basis or for peak loads or highly complex special problems—both computer systems are at your service, manned by your staff or ours. (Another Burroughs bonus—we will train personnel in computer use and operation!)

Why wait or do without when all the advantages of high-speed electronic data processing await you at Burroughs Computer Centre. A Burroughs Systems Counselor and Computer Specialist can give you expert advice and quotations on the most economical method of handling your needs. Call him at PA 8-1924 in Ottawa. Or write Burroughs in Toronto or at 1322 Carling Ave., Ottawa 3, Ontario. Or if you prefer, contact your local Burroughs Office.

What U.K.'s New Trade Alliance Can Mean for Us

Special Correspondence

LONDON —U. K.'s new trading alliance — the European Free Trade Association — now is expected to be ratified and operating by the spring.

Its impact is certain to affect Canadian export sales, probably reducing them in the short run, possibly increasing them if longer-term hopes are realized.

For the U. K. the project has two aims:

- **To provide business-booming new markets** in the member group of Norway, Sweden, Denmark, Switzerland, Portugal and Austria.
- **To gird Outer Seven loins** for a give-and-take series of tariff negotiations with the six nations in the now prosperous European Common Market.

As civil servants have worked out the details (to be initialed in Stockholm in late November and ratified in December) EFTA provisions now deal with industrial products plus a list of specific agricultural and fishery commodities.

For industrial goods, the plan is to cut all tariffs by 20% on July 1, 1960 and by 10% a year on Jan. 1 of each of the following years so as to create a duty free trade area by 1970.

Simultaneous with the tariff cuts, there'll be quota increases and a special clause in the draft forbids the use of domestic subsidies or other aids to offset the improvements.

Fish and fish products, bacon and cheese are the subject of special bilateral companion arrangements still under negotiation.

Britain, for example, has agreed to allow 50% tariff cut on Danish cheese and bacon effective July 1, 1960 followed by total abolition of the tariff in 1961, in order to meet the special problems of Danish producers and there's talk of a 20% reduction of the tariff on frozen fish fillets from Norway.

On industrial goods, the two big problems of origin and agreement on the processes that can be included (aluminum imported into Britain, alloyed and exported again, for instance) are still being talked about.

Treasury officials say progress is "excellent", however, with virtual certainty of general agreement by ratification date.

On processes, for example, only seven commodities are still unsettled out of the hundreds that come under general tariff regulations.

What does it add up to?

For all the Commonwealth countries it means an end to the protection of Imperial Preference in industrial goods plus the agricultural exceptions by 1970.

All told, it's calculated roughly that a potential of some $50 million - $60 million worth of industrial products, slightly more in the agricultural category.

Affecting Canada in particular: Frozen fish and bacon concessions.

"Canada will lose her preferential position," say Canadian government spokesmen. "Not only that, but even with the dollar liberalization Britain — the major market we're involved with — didn't make changes in the ban on bacon and types of fish apart from salmon.

"It means we're still barred from the market or in a less favorable position in commodities that have long been traditional Canadian exports to the U. K."

Other goods: Chemicals, aluminum products in particular.

And in the case of automobiles, new arrangements will be necessary if Canadian production sold in the U. K. is to survive.

Under present arrangement, the EFTA tariff cuts will mean that by 1970, Canadian automobiles coming in at Imperial Preference rates will in fact be discriminated against instead of helped as at present.

For the future:

"Canadian manufacturers of useful light items — not the bread and butter lines but the seasoning types — will find it difficult to get in and established in EFTA," government officials told **FP**.

"There is a surprising number of these products that would naturally do well here by virtue of the high degree of specialization involved (tailor's scissors for example) that will have a hard time under EFTA rules."

But, say the experts, this does not mean automatically that all this trade will be lost — that's really out of the question.

Instead, some of it may fail on straight pricing in competition with EFTA rivals to start with.

Even then these could come back when Commonwealth economies reshape their own production cost structures.

And, it's stressed, the longer-term aim is to boost total trade and economic development to the extent of providing a bigger market for all goods.

And, overshadowing the whole set-up, is British and Scandinavian determination to use EFTA to bargain for tariff cuts with the Common Market members.

ANNOUNCEMENT

THE GLIDDEN COMPANY APPOINTMENT

R. W. HUMPHREY

J. W. Fowler, Managing Director of The Glidden Company Limited, has announced the appointment of R. W. Humphrey as Director of Branches.

Mr. Humphrey comes to Glidden with extensive experience in the paint industry. He formerly was president of Humphrey Paint and Wallpaper Ltd. Prior to that he had been northern sales representative of the Glidden Company for a number of years. He will be responsible for the operation of Glidden branches across Canada.

STAFFORD FOODS APPOINTMENT

CLAYTON M. STAFFORD

J. H. Stafford, President of Stafford Foods Limited, announces the appointment of Clayton M. Stafford as Director of Marketing. Mr. Clayton M. Stafford, who has served the company in administration and sales capacities for many years, has broad experience in the food industry. In his new capacity, he will be responsible for coast to coast marketing of Stafford Foods Products.

IMPERIAL BANK OF CANADA EXECUTIVES ADDRESS 85TH ANNUAL MEETING

Balanced or Surplus Budget Would Contribute Greatly to Controlling Total Expenditure and Making More Funds Available for Private Borrowing

J. S. PROCTOR
President

H. W. THOMSON
General Manager

General Manager Reports Further Sound Growth of Bank's Operations and Business During Year of Changing Conditions

Mr. J. S. Proctor, President of Imperial Bank of Canada, addressing the shareholders at the 85th Annual Meeting of the Bank, said:

The General Manager has given you an informative and comprehensive review of the Bank's operations for the past year and I would like to congratulate him on the new and forthright approach he has taken in dealing with the business and development of our Bank.

The year's results are gratifying to your Directors and will, I feel sure, be satisfactory to all our shareholders.

I wish to direct my own remarks to general business conditions in this country and elsewhere which determine the scope and effect of banking operations in a period in the development of the Canadian economy that will require many important and far-reaching policy decisions to be made by bankers, by businessmen generally, and, particularly, by governments.

The vigour of the business recovery, which was already evident at our last Annual Meeting, is the most important development of the past year. Last July industrial production stood 8.5% above the recession low of August, 1958, which carried us 2.3% above the peak levels of the 1956-7 boom. The rise of 7.5% in gross national product over the past year was almost all solid gain as prices rose only 2%. Employment is now running higher than ever before and unemployment has fallen to much lower levels. Canadians are better off than they have ever been.

That the decline of 1957-1958 was not more drastic is quite remarkable as deflationary forces then at work in the economy were powerful indeed. Inventory investment fell from a 1956 peak rate of $1,100 million a year to a *dis*investment rate of $800 million a year at the low point of 1958, a net swing of nearly $2 billion. From peak to trough the change in the annual rate of spending on machinery and equipment amounted to $800 million and on non-residential construction to $500 million. Yet despite these severe cuts in market demand, gross national expenditure merely paused in its upward march.

The forces sustaining the economy and so accounting for this remarkable behaviour of the national output in the face of the decline in investment spending are readily identified. Consumer spending and government spending on goods and services both continued to grow as they have done for years past; there was a remarkably prompt and vigorous response of residential construction to government encouragement; and imports declined as is usual in recession.

The upsurge of 1959 is strongly supported by the return of inventory accumulation. Outlays on non-residential construction and on machinery and equipment are moving upward. Exports, after a slight decline, are expanding substantially.

In both recession and prosperity government now plays a role of a completely different order of magnitude from pre-war years. A sum equal to more than one quarter of the gross national expenditure is now disbursed by governments in Canada. Government spending on goods and services alone has averaged about 18% of the gross national expenditure over the last seven years; spending on transfer payments for welfare and miscellaneous purposes adds up to a sum equal to another 10%. In addition, over the years, government financial aid to house building has been of great importance.

This enlarged role of government comes with and contributes to high levels of private business investment. The high rate of technological change and growth in world markets appears to provide a continued outlet for investment and further growth in our external trade. In all these circumstances strains are periodically placed on our resources and inflation is a continuing threat. While fiscal policy has proved beneficial in combatting recession it is of the greatest importance that it should also play its part in curbing inflation. This means that in times of boom the growth of government expenditures on goods and services must be carefully controlled and that the government should then balance its budget or run surpluses.

A great difficulty in following such a programme is in making adjustments quickly enough to prevent anti-recessionary action from becoming an inflationary force as we move into recovery. One of the remarkable features of the economy in the recession and now in the boom is the promptness of changes in housing outlay to rise in recession and fall in boom. What is needed now is a means of greater promptness in adjusting government budgets during boom to put a curb on inflation pressures. In this the Federal Government must take the lead.

Just as fiscal policy has played a role along with monetary policy in limiting recession, it must be used with monetary policy in curbing inflation. The continuation of government deficits at the present time is throwing a burden on monetary policy that is too large for it alone to manage.

The easy money and lower interest rates of the recession have now given way to tighter money and higher interest rates. Indeed, interest rates are higher than they have been since the end of World War I. I feel that, in part, the present high interest rates reflect a situation different from that of the 1930's and even the late 1920's. The high government spending, rapid technological change, high consumer outlay and prosperity in our external markets all make the productivity of capital and the demands for capital high. Interest rates much higher than those of the last twenty years will probably be with us for some time. The interest rate, like any other price, will then play its role both in allocating funds to those capital projects which meet the test of being the most productive and in limiting total investment to available savings.

That interest rates are now high and credit tight is not because there has been no increase in the money supply and in bank credit in the last two years. On the contrary, the money supply expanded rapidly in late 1957 and in 1958; this expansion was accompanied by the acquisition of $1.4 billion of government securities by the chartered banks. Beginning in late 1958 and continuing throughout 1959 bank loans were expanded by almost one billion dollars or nearly 20 per cent; this expansion in loans was made possible by selling government bonds at substantial losses.

Despite this rise in bank loans the demand for loans expanded even more. I feel that much of the complaint about "tight" money is a failure of borrowers to adjust their thinking to the fact that we are in a period of high interest rates. We may also be throwing too much of the burden of controlling inflationary pressures on monetary policy. A balanced or surplus budget would contribute greatly to controlling total expenditure and making more funds available for private borrowing.

An important indication of the strain now being put on monetary policy is to be seen in the great spread in interest rates both long and short between the United States and Canada. The spread is now well over 1% between long-term rates and over 1½% between short rates. Though they have been somewhat lessened recently by the rapid rise of American rates the spreads are still wide enough to induce a heavy inflow of short-term capital and higher levels of new security issues in the United States. At the same time there has been a sharp revival in the inflow of capital for direct investment.

The foreign exchange thus made available has helped finance our current account deficit, which is once more rising rapidly with business recovery. It has also made the demand for the Canadian dollar great enough to lift its value to peak levels, thus adding further encouragement to imports and the handicapping of exports. However, this is the pattern of developments which a capital importing country cannot avoid. Interest rates are driven up by the scarcity of capital and by the attempts of the monetary authorities to contain total domestic spending. Borrowing abroad also stimulates greater spending on plant and equipment and on public works. The tasks of monetary and fiscal policy are thereby made more demanding. This is a further strong reason why fiscal policy should take its fair share of the load.

The structure of our balance of payments is being adversely affected by the growth in the deficit on non-merchandise current transactions. These are made up of payments for interest and dividends, travel, freight, immigrants' remittances and miscellaneous transactions. In the last decade the deficit on this group of transactions alone grew from $339 million to $897 millions, an amount which may be compared with our peak merchandise import deficit of $728 millions in 1956. Moreover, this net deficit does not shrink during recessions as does the merchandise import deficit. In 1958 the merchandise deficit fell to $170 millions but the non-merchandise deficit was still $865 millions.

Our foreign borrowings and rising incomes are responsible for this development of a relatively new and inflexible form of current net payments. Borrowing involves rising interest and dividend payments and larger transfers of earnings to head offices abroad; these payments in the year ending June 1959 amounted to $618 millions. The prosperity it stimulates not only brings higher freight payments on imports but increased travel spending abroad by Canadians. Whether this new situation should occasion alarm may be doubted, however. Should our development pace slacken, tourist spending abroad would soon fall, as would freight payments with merchandise imports. Though contractual interest payments would of course have to be met, dividends would probably decline. The fall in the foreign exchange value of the Canadian dollar, which would accompany any serious setback to the inflow of capital from abroad, would speed the reduction of payments due and stimulate the export balance by which these payments would then have to be covered.

But no such drastic decline in either our exports or in borrowing in other countries appears now in prospect. The early return to convertibility between dollars and European currencies will be a fitting climax to the great efforts devoted to post-war reconstruction, particularly by the United States. It will be a major step toward the restoration of that multilateral trading world which it has been Canadian policy to promote and on which the fate of our export trade so largely depends. It should make it possible, in particular, to sell more goods in countries overseas.

The most important contribution which Canada can make to a world of convertible and stable exchange rates is to use fiscal and monetary policy skillfully and vigorously to maintain a high level of employment and contain the forces of inflation. The current balance of payments problem of the United States suggests that this will be no easy task, especially if Canada plays the role in aiding the economic development of other countries which her great productive powers mark out for her in the eyes of other nations. In every year since 1950, with the exception of the year of the Suez crisis, 1957, other countries have been able to add to their gold and dollar balances through transactions with the United States. American net earnings on current account have not been large enough to cover the dollars being invested or spent abroad or given as foreign aid. By this situation the revival of European productive power and the rebuilding of their monetary reserves has been made possible. But such a gold drain cannot be tolerated by the United States indefinitely. On the other hand the very revival of European exporting power which American policy has stimulated makes the correction of this unbalanced situation by the growth of United States exports all the more difficult.

In these circumstances the United States may find it hard to maintain present levels of foreign aid; other countries, Canada included, may now reasonably be expected to assume a greater share of this burden. Protectionist forces in the United States are likely to use the present situation to push their claims to relief from the mounting keenness of foreign import competition. To solve such balance of payments problems mainly by trade restriction would be a deplorable reversal of the attack on trade barriers so successfully carried through since the war. The nations need now to re-appraise their economic potentialities, their international responsibilities and the domestic policies required to carry them out without disrupting the relative stability of foreign exchange rates which has been achieved, and without reversing the whole trend to a multilateral trading world.

For our part our potentialities are great and our responsibilities correspondingly heavy. True we have our problems. That nearly one quarter of our wheat crop lies under snow is disappointing; but crops have been largely recovered before in such circumstances. Our capital spending remained high even in recession; we have a seaway now in use; and our resource development continues vigorously. We are indeed fortunate, as people in other countries seem often to realize more keenly than we do.

So recent has been the change in our productive powers and so unaccustomed are we to new international tasks that we may fail to grasp fully our opportunities. We may too easily be fearful of the future of our trade or the loss of our powers of self-determination. Yet failure to rise to our opportunities will preserve neither our trade nor our nation's freedom. Only if we put our efforts wholeheartedly to the tasks of national development will our powers grow to match our responsibilities.

Addressing the shareholders at the 85th Annual Meeting of Imperial Bank of Canada, Mr. H. W. Thomson, General Manager, said:

It is my privilege to present to you today the 85th Annual Statement of the Bank.

Last year when I spoke to you we had reached the end of a period which had seen a very large increase in the country's money supply made possible by action of the Bank of Canada. Our deposits had risen in a year by more than 20% and this increase had been reflected, not in increased loans, but rather in holdings of Government bonds which had increased $118 million, an increase over 1957 of 80%.

Throughout the fiscal year covered by the statement presented today the total money supply has declined slightly. Thus it has not been possible for the Chartered Banks as a whole to increase their Canadian deposits materially and we have been working with a more or less constant total of resources.

The situation with respect to the needs of our customers for Bank credit has also changed radically during the year under review. The pause or hesitation in the economic growth which occurred in 1957-8 has been superseded by a new demand for expansion and we have felt this demand in a new surge of credit needs. During the year we have increased advances to customers by more than $90 million to a figure more than 10% greater than ever before. We foresaw some part of this increase and a year ago were already taking steps to make a large amount readily available. The funds could only come from sale of securities and, due to rising interest rates, only by sales at a loss, which are being recovered from increased earnings by way of loan interest.

As the year proceeded all reasonable steps were taken to be more selective in the granting of credit and to seek a more rapid turnover in loans. As a Bank we have always been conscious of the needs of our smaller customers whose chief source of credit lies in this Bank. Great emphasis has been and will be given to this aspect of our loaning policy throughout all our branches. Further steps in these directions will be taken but until the Central Bank allows the total of our resources to increase it will not be expedient to increase further the total of our loans.

The figures to be discussed today have many satisfactory features, not the least gratifying is that the Bank's assets total $1,011,507,546, a gain of $1,120,716 over last year.

The statement of undivided profits shows that earnings available for distribution were $3,691,000, an increase of 19.7% or $607,000 over last year. These earnings are computed after providing for income taxes of $3,966,000, after depreciation at rates permitted, after contributions to Staff Pension Fund, also transfer to inner reserves out of which full provision has been made for diminution in value of loans and of those investments for which such reserves are permitted.

Dividends at the rate of 35 cents per share were paid in each of 3 quarters with a final quarter payment of 40 cents and provision was made for a bonus of 35 cents per share payable December 1st, the total distribution being $1.80 per share, the same as last year. There are, however, 224,000 additional shares outstanding this year. After providing for the dividends and bonus there remained $1,453,000 to be carried forward and added to the previous undivided profit, out of which $1,600,000 was transferred to Rest Account. Undivided Profits Account now stands at $1,572,316.

During the year shareholders of the Bank were given Rights to subscribe for 224,000 additional shares of the Bank's stock at $40 per share with most satisfactory results. Capital funds were thereby increased by $8,960,000. Capital and Rest Account now total $53 million which provides a suitable base for future growth.

Assets

Cash resources are shown at $152 million, down a little from last year.

Investments at $219 million decreased $94 million due to a reduction in holdings of Government of Canada securities, the result of a switch of funds to current loans to provide for the needs of the Bank's customers. Included in the holdings of Government of Canada securities are $64 million in treasury bills, a decrease of $4 million for the year.

Cash and investments plus Day-to-Day and Call Loans which are referred to as quick assets total $430 million and represent 45.5% of total liabilities to the public, which compares with 53.9% a year ago and 45.2% in 1957.

Loans

Current Loans at $490 million are up $77 million over a year ago and represent an extremely well diversified list of customers. As in former years we have endeavoured to meet the needs of clients engaged in every kind of industry and commercial enterprise. Government bodies at every level, religious organizations, educational, and health and welfare institutions are borrowers, as well as individuals in every walk of life.

A recent analysis of our customers showed that of a total slightly in excess of 100,000 borrowing accounts more than 84,000 were individuals which includes 20,000 farmers. Many of the remaining 20% were small concerns looking to the Bank not only for financial support by way of loans but to our Managers and senior staff for advice and counsel which was readily forthcoming.

You may be justly proud of the part your Bank has played in financing business, farmers and householders throughout the years.

Mortgages insured under the terms of the National Housing Act (1954) at $55 million show a gain for the year of $13 million, a further indication of our readiness to participate in the Nation's home-building programme. Outstanding commitments at the year-end, most of which represent houses under construction, approximate $5 million which will be added to this asset figure in the ensuing months. Our portfolio consists of 5,679 separate mortgages and in addition branches of the Bank service another 1,750 mortgages as agents for Central Mortgage and Housing Corporation and others.

Premises

Premises Account and shares of and loans to Imbank Realty Co. Ltd. total $17 million, a gain of $4 million over last year. The principal purchases were an outstanding site at Bay and Richmond Sts. in Toronto where it is proposed to construct a fine modern building to house an important branch and to provide first-class rental space; a property at Portage and Donald Sts. in Winnipeg where we have had a highly satisfactory branch for some years and which later on will be developed as the centre of our operations in that city; also a property adjacent to our main office on James St. in Hamilton which will enable us to rebuild our facilities there at an early date.

Branches now number 322, a gain of 16 for the year. Among larger projects completed within the year was a new building in Kitchener, while new modern facilities at Chatham will be opened this week. The policy of modernizing older offices and equipping them with new fixtures, also enlarging them where desirable, continued.

In keeping with the Bank's tradition of serving the mining areas far afield, it is worthy of note that a branch is about to be opened in Carol Lake, Newfoundland, near the Quebec-Labrador border.

Deposits

Total deposits at $935 million show a decrease of $6 million from last year. A most gratifying increase of $15 million is recorded in personal savings deposits which reached a new all-time high of $485 million; other gains were $5 million in Provincial Government deposits and $15 million in deposits by other banks. Government of Canada deposits dropped $7 million, a decrease of $23 million was shown in other demand Canadian deposits and $12 million in other deposits in currency other than Canadian. We have continued to show sound growth, the number of deposit accounts now exceeds 700,000, a gain of some 25,000 for the year.

Shareholders

We are pleased to see an increase in the number of shareholders which now stands at 4,252, a gain of 437 for the year. Of these 187 are residents of United States and 266 in United Kingdom and foreign countries. The average shareholding is 315 shares. The business that has been turned to the Bank by the shareholders is gratefully acknowledged.

Foreign Business

The foreign business of the Bank continues to be an important segment of our operations. Through well established correspondent relationships we have access to all market places of the world and number in the hundreds the foreign bank accounts on our books. In recognition of the value of this business and its expansion in more recent years to one of world-wide scope, the name of the department has been altered to International Department, and Mr. H. D. Scott, formerly Superintendent of Foreign Business, has been appointed an Assistant General Manager with broader responsibilities in the International field. By the use of the high-speed teletype service across Canada and Telex Service to Europe, also direct telephones to important markets, we are well equipped to handle transactions of any size with dispatch.

Staff

The Staff of the Bank now numbers 4,013, a gain over last year of 149. It is pleasing to report that of this increase 113 are young men who are most welcome additions to the Staff at a time when our branch development is brisk.

During a year that has not been without problems I have been proud of the part which the whole Staff has played in making possible the splendid results that are placed before you today. On your behalf I extend to every one of them a sincere "thank you for a job well done."

A special word of praise is owing to our Managers who have had the burden of interpreting to the Bank's many customers the strict credit conditions under which we have had to operate for the greater part of the year. While the co-operation of our clients has been heart-warming and is hereby acknowledged, to the men in charge of our branches great credit is due for the manner in which they have dealt with the problem and retained good-will.

Especially do I want to thank the Assistant General Managers, other Executive Officers and the Heads of Departments at Head Office and elsewhere for the splendid support and co-operation given me throughout the year.

While on the subject of Staff I have pleasure in recording that extra courses for the training of young men to ready them for moves into fields of greater responsibility continue to have marked attention. Study groups, commenced in Toronto last Winter, are being intensified this year and tellers' schools have been established in several main centres. Discussion groups and instructional periods have become part of our district Staff Meetings and plans are being furthered to make greater use of such opportunities to train young men more effectively for promotion.

More than ever it is becoming apparent that banking as a career can be an interesting, stimulating and rewarding experience, and I urge young men of good background and education to apply themselves to it.

My remarks today have been confined to the statement and the business of the Bank. You, the Shareholders of the Bank, may look forward with confidence in full knowledge that the Bank is in sound condition, well equipped to provide banking service to an ever-increasing number of people and to share in the long term growth and prosperity of Canada. The problems that present themselves will be handled by the Staff expeditiously and to the best of their great ability, and I am confident even better figures than those presented today will be commented upon from this chair in the future.

Ask Showdown On Rail Rift

The Atlantic Provinces see a prolonged railway dispute a blow to economic recovery . . .

MONTREAL (Staff) — The Atlantic Provinces have joined organized labor in a hard push to force the nation's transport problems — particularly those concerning railways—to a crisis.

Not that the two are formal allies. Far from it.

But both have their own reasons for bringing matters to a head.

Meanwhile, the federal government—with no inexpensive solutions in sight—is likely to favor delay and continued intensive study. It can be reasonably sure that any massive solutions will be costly for its treasury.

Labor's pressure to "get it over with" stems from the disagreement over wages between the railways and the non-operating rail unions (**FP**, Nov. 14). The latter contend national transport policies have unfairly held down wages.

The Atlantic Provinces want to attack the transport tangle immediately for another reason.

They think any delay will cause further deterioration of their position in the Canadian economy.

This opinion was obvious in recent East Coast hearings of the federal Royal Commission on Transportation.

Although three of the four Atlantic provincial governments are Conservative—like the federal government—the language used was extremely blunt.

What it boiled down to, in most cases, was a demand for additional federal help to cut transport costs for Atlantic Provinces shippers.

No one was shy about asking for more subsidies. They almost invariably based their case on "right".

The royal commissioners were told that the promised ability of the Maritimes to supply central Canadian markets was an integral part of Confederation itself and that construction of a railway between the East Coast and Central Canada, combined with special subsidies on movement of goods, was a recognition of this "obligation".

Yet, said one brief after another, this goal hadn't been achieved. Now it was up to Ottawa—presumably with some helpful suggestions from the commission—to make good.

Conservative Premier Hugh John Flemming of New Brunswick commented:

"Most attempts at correction have proved abortive. . . . The economy of the province is once more under heavy pressure from the discriminatory effect of changes which have taken place."

Flemming said New Brunswickers must be assured:

- **Access** to Central Canadian markets.
- **Protection** against the heavy effect of horizontal rail freight rate increases.
- **A guarantee** against further deterioration of their transport position.

Flemming and other witnesses were nervous about the effect of future advances in winter navigation of the St. Lawrence River.

They foresaw a reduction in tonnage moving through Saint John and Halifax. And they obviously believed that measures should be taken to prevent this.

Yet to hinder development of winter shipping in the St. Lawrence would be political dynamite for Ottawa.

A solution might be to accede to Atlantic Provinces' requests for major transport projects—a causeway to Prince Edward Island, the Chignecto canal, a special corridor road from New Brunswick through Maine to Quebec, fatter subventions to help sell Nova Scotia coal, federal aid in development of a large new port at Bay d'Espoir in Newfoundland.

But these would cost a lot of money—money the federal government doesn't have to spare right now.

East Coast industry turned out in force to back the urgent demand for help.

Acadia-Atlantic Sugar Refineries Ltd.—which presented a detailed analysis of its competitive position — said "huge transportation difficulties" are building up against Atlantic industries.

The big sugar company suggested that Ottawa concentrate on helping to move Atlantic products to markets outside the four eastern provinces.

It might even be necessary to give a subvention sufficient to cover the full Maritime Provinces portion of freight rates westbound out of the area.

This would, in effect, put Maritime Provinces producers on the border of Central Canada.

The deep concern with the transport problem was mirrored in a surprising suggestion from the Conservative government of P.E.I. It said full nationalization of the railways looked desirable.

This was startling evidence of the witnesses' general desire to use almost any technique to lift the transport cost burden.

Witnesses' unanimous opinion:

Every passing year makes it tougher on the Atlantic Provinces.

Transport costs are rising more rapidly in the area than in the rest of Canada, while per capita income and production figures are rising more slowly. This erodes markets and the standard of living.

Newfoundland's Special Problem

Newfoundlanders think they have the transport problem to end them all.

They can fly to London, Eng, more quickly than to Ottawa.

A resident of St. John's is closer to Berlin or Stockholm than to B. C. However, the Canadian Tariff structure, the Royal Commission on Transportation was told, channels Newfoundland purchases to Canadian companies rather than to those abroad.

Seaway Carries 72% More Tonnage Than Old Canals

Preliminary traffic statistics show that 17.4 million tons of cargo moved through the St. Lawrence Seaway (Montreal-Lake Ontario) in the current navigation season to the end of October.

This is 7.3 million tons, or 72%, more than carried by the old canals in the corresponding period of 1958.

More about the Seaway, p. 10.

The upbound movement increased by 5.5 million tons (128%) and the downbound by 1.8 million tons (31%). Bulk cargo was 91% of the total.

Cargo carried during October amounted to 2.8 million tons of which 64% was upbound. The total was 75% above October, 1958.

Cargo transported through the Welland Canal to the end of October totaled 28.8 million tons, which was 24% greater than the traffic for the corresponding period of 1958.

Upbound movement increased by 94% and downbound by 3%.

During the month of October this year the notable increase in upbound movement continued, while the downbound tonnage was below that of October, 1958.

The total for the month was 3.27 million tons as compared with 2.7 million tons in October, 1958.

By the end of October, 5,861 vessels had passed through the St. Lambert Lock, either upbound or downbound.

Through passages on the Welland canal for the same period numbered 6,771.

ANNOUNCEMENT

HOWDEN EXPANDS EASTERN SERVICES

E. A. BURGESS
D.S.M.; MIMarE; AMIplantE

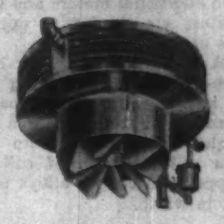
E. A. Burgess has been appointed Eastern Area Manager of James Howden and Company of Canada Limited, it is announced by William MacOwan, Managing Director. Mr. Burgess will direct an expanding sales and service program toward Eastern Canada from the firm's Montreal office, 1255 University Street. He was formerly Chief Engineer at the manufacturing plant of the power and industrial equipment company in Scarborough, Ont.

SHELDON
UNIT HEATERS

low cost heat
where you need it

New design. Sheldon Unit Heaters deliver fast heat at low final temperatures, assuring most effective distribution. You get full value for every fuel dollar and workers maintain production in comfort. Dependable operation and attractive appearance make these Heaters a recommended installation for institutions and public and industrial buildings. Installation costs are low and maintenance is at a minimum. Available in a wide range of sizes for steam or hot water service.

Write for your copy of Sheldon Catalogue No. 711.



Sheldon Vertical Blow-down Unit Heater for high ceiling installations. Heated air is discharged vertically downward through adjustable outlet diffusers to give maximum heat distribution. Steam or hot water models are available in all sizes.

Industrial Growth

Manufacturing plants new to Canada; expansions of existing industry across the nation.

New Toronto

Anaconda American Brass Ltd., has its new reversing hot rolling mill in production just seven months from start of construction (FP, Nov. 21).

Mill can roll heat copper and copper alloy cakes weighing up to 2½ tons each, eight inches thick, and up to a maximum of 60 in.

Machine reverses or rolls in opposite directions, thereby greatly increasing speed of the rolling operation. A six-inch thick copper cake can be reduced to a gauge of .200 in. in just two minutes.

Mill cost around $2 million and electrical equipment alone is worth $500,000. Supplementary equipment includes a gas-fired, walking-beam type furnace, conveyors, run-out tables, shear, pickle line for cleaning copper and a coiler.

Up-to-date mechanical handling equipment permits entire operation to be handled by a crew of three.

Largest motor, which drives the generator for supplying dc current to main mill motor is rated at 1750 hp while main motor delivers 1500 hp. Ninety-two additional motors and generators are needed to operate the mill.

A $1 million new Four-High non-reversing cold rolling mill is stepping up the company's sheet metal production to a new high. The new 1,000-hp mill can roll 5,000 lb. of coils of copper and copper alloys to 40 in. width.

Tilbury, Ont.

Tyler Refrigeration Corp., Niles, Mich., has formed a new manufacturing and sales subsidiary in Canada. Known as **Canadian Tyler Refrigeration Ltd.**, the company will start manufacturing for the first time in Canada full range of refrigeration units this year at its plant in Tilbury, Ont.

As in the past, all sales activities will be channelled through the Tyler office at 732 Spadina Ave., Toronto.

Robert L. Tyler, Sr., president, **Tyler Refrigeration Corp.**, said sales of equipment in Canada had reached the point where it had become necessary to start manufacturing in Canada.

One of the largest manufacturers of supermarket and independent grocery refrigeration units in the world, Tyler markets its products on four continents.

Directors of the new Canadian company: R. L. Tyler, Sr., George H. Mayhew, S. D. Vander Weg, all of Niles, Mich.; Howard A. Small, Toronto, and W. H. Olsen, Tilbury.

Mr. Small is also general manager of the Canadian company. Manufacturing manager at Tilbury will be K. D. Mihills of Smyrna, Del., and Duncan C. Goggan is office manager.

Montreal

Saskatchewan Power Corp., has awarded a $2.7 million turbine contract to **A. Johnson & Co. (Canada) Ltd.**, Montreal.

Contract involves supply, delivery and installation of six 46,000-hp turbines for the Squaw Rapids development at Carrot River, Sask.

The turbines will be designed in Montreal and manufactured by **Sorel Industries Ltd.**, Sorel, Que. Turbine contract involves many thousands of man hours of employment for Sorel, previously considered one of the areas of Quebec hardest-hit by unemployment.

Windsor

Sherman Laboratories, Detroit, Mich., will build a Canadian plant in the Sandwich West industrial park, Windsor area.

Construction will start shortly on a one-story building containing 5,000 sq. ft. **Trace & Glos**, Windsor architect is preparing plans for the building.

Sherman Laboratories is a manufacturer of pharmaceuticals and biologicals.

In 1952, Greater Windsor Industrial Commission states, 35% of Windsor labor was non-automotive. In 1958, the figure was 48%. Each new non-automotive plant is giving the city a greater degree of stability and progress.

Dominion Bureau of Statistics has forecast an expenditure of $28.8 million on new plants and equipment for the area during 1959. To date, building permits substantiate these figures, with expenditure up about 63% over 1958.

British Columbia

News from British Columbia: **Consolidated Carbon Co.**, Surrey, has completed its $100,000 charcoal plant which will have a production rate of 4-5 tons daily. It uses a new process for manufacturing charcoal briquettes on a continuous basis. Raw material is cedar sawdust.

Cambrian Lumber Products Ltd., Victoria, is now buying salvage lumber from mills and converting it to short length, good-quality lumber. About 30 men are employed on two shifts.

Projects under way:

Canadian Kenworth Ltd., Burnaby: Addition to motor truck body plant.

Commercial Body Builders Ltd., Burnaby: $75,000 new truck body plant replacing present plant.

Canadian Construction Products Ltd.; Burnaby: New plant replacing present facilities for manufacture of construction specialties.

British American Chemical Co., Burnaby: $70,000 new anti-freeze plant replacing present facilities.

Contemplated:

Smith Lithograph Co., Richmond: $500,000 new printing and carton plant to replace present facilities. Construction starts this winter with operations scheduled to start late 1960.

Holdfast Natural Resources Ltd., Port Alberni: New plant manufacturing pozzolan, a concrete hardening material.

Transport Scrip Cut Your Costs?

A punch card scrip system could save shippers 50c per transaction on small shipment traffic.

Total saving to the economy: Hundreds of thousands of dollars a year.

This statement was made by R. S. Schmalle, director of office methods research, **Consolidated Freightways Inc.**, Avon Lake, Ohio, to the annual convention of the Automotive Transport Association of Ontario in Toronto this week.

More than one third of the cost of less than 100 lb. shipments is in paper work, Schmalle asserted.

Consolidated, he said, finds that 200 lb. shipments or less constitute 57% of all shipments, return 12% of revenue and involve 6% of tonnage.

One fourth of the cost on this size of shipment is in paper work. Average paper work cost per shipment: $1.

"We are in the dime store business transaction - wise, yet none of our transactions are 'cash-and-carry'," he said.

A new personalized medium of exchange, punch card scrip, ordered by shippers and dispensed by Transport Clearings through banks on a 14 - day credit arrangement, could work to eliminate completely bill for bill accounting in the carriers' records, Schmalle suggested.

This would save 50c per transaction on small shipment traffic.

Banks could issue personalized punch card scrip in varying denominations set to fit a weight - distance charge chart, he said.

Customers could order scrip two weeks in advance of payment, dispense the scrip as shipments were made, giving any carrier the correct amount required.

The carrier could redeem the scrip at the bank for face value. The bank would bill the customer on a two-week cycle with only one invoice involved covering hundreds of shipments.

Freight could move on two copies of the lading. One copy would be delivered to the consignee with the freight, with delivery secured on a manifest basis.

Interline could be settled on a daily manifest with the money always going with the freight.

Statistics and accounts receivable control could be accomplished at origin terminals by adding machine summaries, point to point, of all traffic in this category.

A breakdown of costs made by Consolidated showed that office cost by the present method averages 84c per bill, and that scrip would cost 30c, he said.

Elimination of billing delays and of errors by use of this system would improve service, Schmalle added.

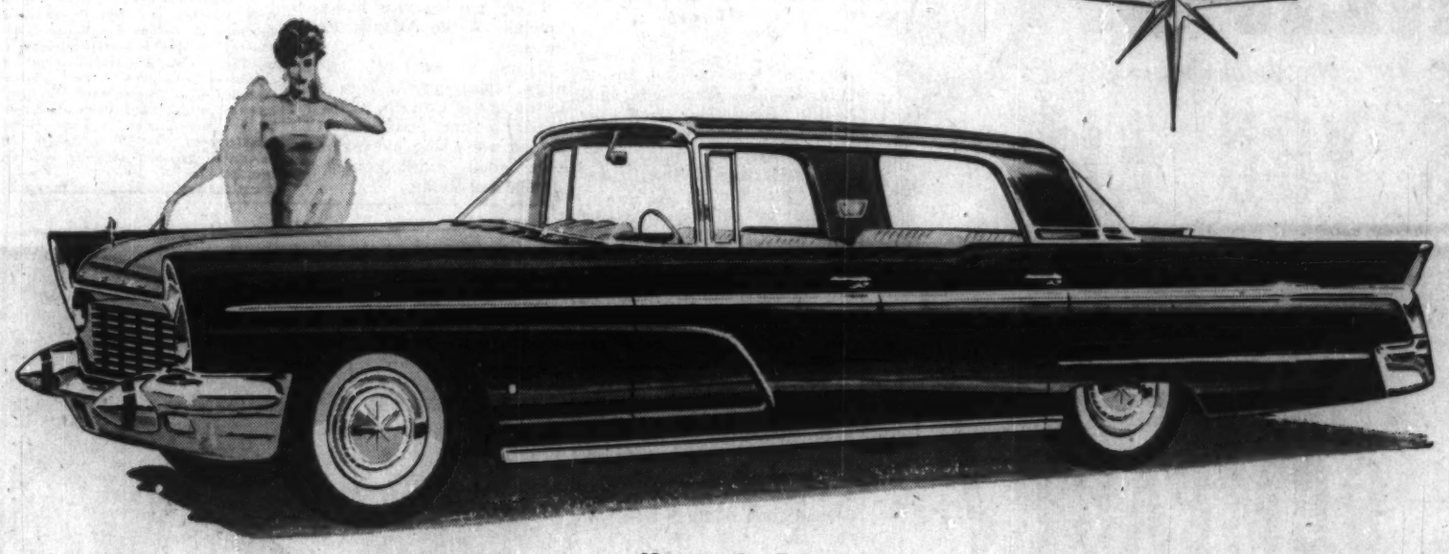
Raw Cotton Openings Up Slightly

MONTREAL (Staff) — Activity in the Canadian cotton textile industry in October — as measured by openings of bales of raw cotton — was up fractionally from the previous month but well below October, 1958.

Last month domestic mills opened 29,735 bales, 43 more than in the previous month. October openings, however, were 8% lower than 32,348 opened in October last year.

Bale openings last month have been affected by a strike against **Dominion Textile Co.'s** big Magog, Que., works which began in late September and at mid-week was still in progress.

Incomparable elegance



THE FINEST LINCOLN IN FORTY YEARS

New motoring distinction and pleasure await you in the Lincoln for 1960. For its new and incomparable elegance enhances the enduring beauty of Lincoln's classic styling. And luxury is reflected in every inch of this magnificently-built automobile: in the tastefully designed instruments that anticipate your every need; in the unparalleled spaciousness of its interiors; in the rich new fabrics and soft, supple leathers. These are some of the rewarding ingredients that go into the new Lincoln—the finest Lincoln in forty years.

Timeless distinction

THE NEW *Lincoln Continental*
AMERICA'S FINEST MOTORCAR

When you enter a Lincoln Continental, you quickly realize why it usually is considered superior to any other car in America. The timeless distinction of its classic design; the rich materials that go into its appointments; the thorough, painstaking care with which it is built—these are some of the reasons for Lincoln Continental's distinguished reputation. Inspect this most luxurious of the famous Lincoln Continentals soon. Ownership of this automobile, one of the Ford of Canada Family of Fine Cars, is a supremely satisfying experience.

SUPPORT SAFE DRIVING WEEK DECEMBER 1st TO DECEMBER 7th

Your personal inspection of these two great motorcars will be welcomed by your dealer:

He Knitted As a Hobby, Made It Pay

Saskatoon's Gus Werle built a $120,000-a-year business around crests and pennants . . .

From Our Own Correspondent

SASKATOON — A $120,000-a-year Saskatoon business has been built from an unlikely and strange boyhood hobby: knitting, crocheting and sewing.

Crest Craft Ltd., which turns out crests and pennants for organizations and individuals across Canada, is the business of 51-year-old Gustave "Gus" Werle who got his start on a Saskatchewan farm while a boy.

Over the years, his business survived a fire, lack of materials and difficulty in getting qualified help.

This year he will supply Queen's University, the Flin Flon boxing club, the Victoria Canadian Legion, the Whitehorse tennis club, the New Glasgow archery club.

These are just examples of the hundreds of centres that use the products of Crest Craft.

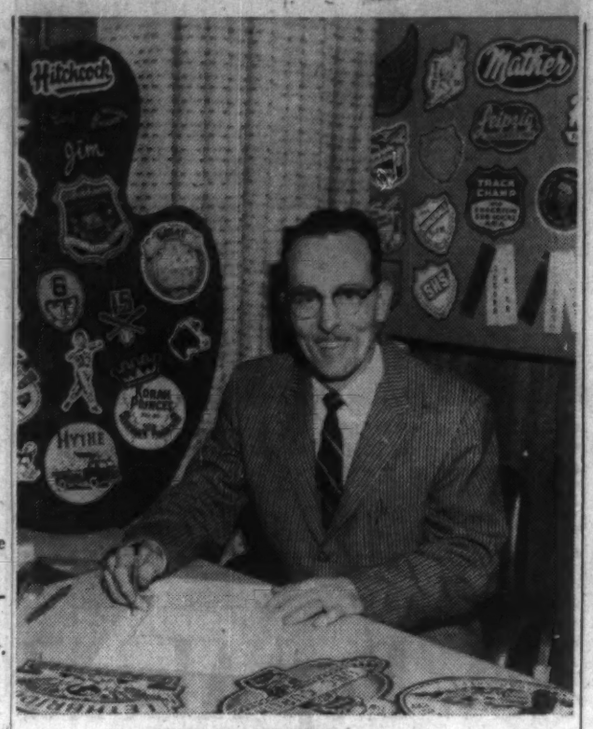
Werle operates on these principles:

- **Be particular about quality.**
- **Be careful in design.**
- **Be prompt in service.**
- **Sports crests and pennants** are the big sellers, although there's a call for crests to typify university colleges and faculties and armed services units.

Sometimes persons order from the firm, enclosing a sample of what some other concern has done earlier.

"That makes it easy for us," says Mr. Werle. "We just stay away from the competitor's design and come up with a better and fancier one."

Most often, an organization will write to say: "We're champions of the such and such league. Make us a crest."



GUSTAVE WERLE and crests.

The design might be oval with a golden crown at the top. The team name might be done with a flourish in a scroll effect and the home town boldly featured.

This job, done by a silkscreen **method, would likely bring 75c a crest.**

Embroidery and other fancy work puts the price to $1.50.

A chenille crest, which gives a plush effect, would cost the buyer about $2.50.

Of course, costs can go higher. Or they can go as low as 10c a crest — for a low-quality material in a large order.

Design makes or breaks in the crest business. "You have to have a colorful and imaginative layout," Mr. Werle says.

He does much of the sketching and designing himself because qualified people are hard come by. But he does employ two other artists.

Inability to find qualified artists is the owner's biggest problem. "Out of 19 applications recently, only one showed promise and he didn't measure up after a trial period."

Mr. Werle says he's willing to pay well for the right person. "I need another good man or two," he says. "Then I could get out and promote the firm and I'm sure I could double our business within a year."

There's little promotion now of Crest Craft. The firm's only advertising is by small stickers tagged on the back of the products and "goodwill" advertising (in high school yearbooks and the like).

Crest Craft employs 26 in Saskatoon. The only salesman is in Ontario.

The firm grew from a staff of one, Werle himself, and he got going because of the skills he'd developed in his boyhood on a farm near Langenburg, Sask.

He had plenty of spare time during the winter when schools were closed due to severe weather. His mother taught him to knit, sew and crochet. (One of his jobs was to patch trousers.)

Later, he made five crests and five pennants for a club in the Saskatoon Nutana Collegiate he attended. Profit: $25.

Spurred on by success, he made pennants advertising Langenburg, his home town. Result: flop.

At the University of Saskatchewan where he enrolled in engineering, he designed a crest for the college. It caught on and his wallet bulged.

Three years of university brought him into the tough times of 1931.

Graduate engineers weren't having much success at getting jobs, so he abandoned the idea of continuing into fourth year.

He would stay out for a year "to devote my full energies to see if I could make any money out of the crest business."

He solicited business from young men he'd met during three previous summers with the RCAF at Camp Borden.

By Christmas of 1931 he had too many orders to handle by himself, so he hired his sister to help.

Expansion was gradual. The war gave him a boost: Orders flowed in from service personnel.

In 1942, Crest Craft was set back by a fire that ate up all the raw materials on hand.

But after a few months of rounding up felt and other necessary materials, Gus Werle was back in business.

Among his steadiest customers are Canadian universities, the fish and game leagues of the Prairies, and high schools. But the hundreds of spot orders are just as important.

Recently there was one from Rabat, Morocco. And not too long ago, there was an order to make up crests for a boys' championship hockey team at the RCAF station at Cold Lake, Alta.

It's orders like these that push total production up higher every year.

Chief suppliers of material for Crest Craft are the Montreal firms, **E. F. Walter Ltd., Bruck Mills Ltd.,** and **Paramount Fabrics.**

Opposition Takes Blast At 2½c Medicine Hat Gas

From Our Own Correspondent

SASKATOON — More about the **Saskatchewan Power Corp.** plan to sell Medicine Hat natural gas at 2½c per 1,000 cu. ft. (FP, Nov. 14):

Liberal leader Ross Thatcher said this will make it "all the more difficult" for Saskatchewan to obtain new industry.

SPC general manager David Cass-Beggs said the deal is to "ensure we've got enough gas to encourage industries."

Thatcher, speaking to a party meeting in Saskatoon, said the CCF government is charging 70c per 1,000 cu. ft. used by consumers in Saskatoon, Regina, and Moose Jaw.

With the rate for Medicine Hat, "the CCF is using the credit of the taxpayers of Saskatchewan to encourage industries to set up in Medicine Hat," he said.

He said the CCF policy has virtually halted drilling for gas in Saskatchewan.

Cass-Beggs, in reply, said the 2½c price comes about because of an SPC agreement with Alberta.

"If we didn't look after Medicine Hat's needs, we wouldn't get any gas at all from Alberta," he said.

The low price was for gas in the ground. Higher prices for Saskatchewan resulted from tapping and distributing.

From the Medicine Hat area, the SPC has rights to 700 billion cu. ft. of natural gas to be used for Saskatchewan purposes.

Cass-Beggs also said the deal with Alberta increases the power corporation's gas supplies by 30%, and means there is a 30-year supply.

The SPC, he said, has recently begun a policy of buying gas "in place" and may expand the policy.

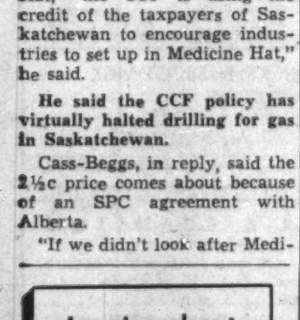
ANNOUNCEMENT



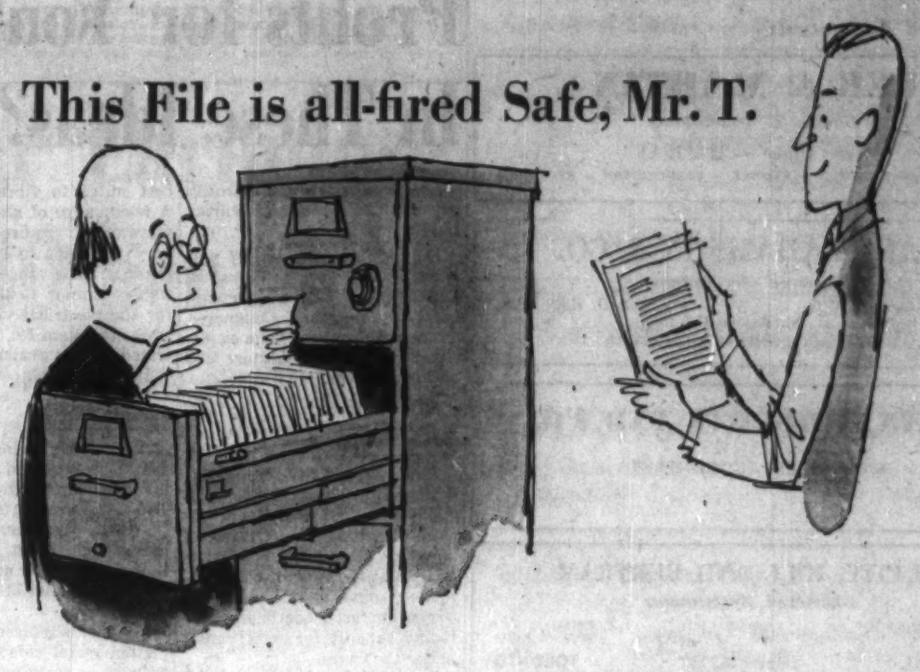
J. E. TOTEN

Jack E. Toten, an assistant superintendent of the western credit department at the Bank of Montreal's head office, has been appointed associate economic adviser of the bank.

Born in London, Ont., he has been with the B of M for 24 years. In 1955, he prepared a study of the service industries of Canada for the bank on behalf of the Gordon Commission.

The appointment is a new one and Mr. Toten will work in association with E. A. Welton, the B of M's economic adviser.

This File is all-fired Safe, Mr. T.



Mr. T.: Not funny, Mr. M. There's nothing funny about fires, anyway.

Mr. M.: **Just what I meant Mr. T. Records in this file have the same protection as in a fire-resistive safe with the same Underwriters' Label to certify it.**

Mr. T.: Well that *is* important! And it seems easy to handle, too.

Mr. M.: **Sure is. The drawers are beautifully suspended and come all the way out with a nice wide-angle V to speed filing!**

Mr. T.: And that's one of our counter-spy locks on the top drawer?

Mr. M.: **Comes with a key lock if you prefer; but the important thing is you can lock one or two or three or four drawers as you please. Each drawer is a separate safe on its own.**

Mr. T.: Well, if I were an office manager, I would run—not walk—to the nearest Mosler-Taylor office and get me one of these insulated files!

Write Mosler-Taylor Safes Ltd., Brampton, Ont., or phone our Sales Office in Montreal, Toronto, Winnipeg or Vancouver.

Mosler-Taylor for safety's sake

Canada's largest manufacturer of safes and bank vaults

WHO SAID DIRT CHEAP?

Clean air cuts year-round air-conditioning costs up to 20%

NEW $6,000,000 SHELL BUILDING is of "tower" design, resembling in front silhouette a large inverted "T." It is 13-stories high and has a gross floor space of 186,000 sq. ft.

Temperature and humidity are closely controlled by the latest type of air-conditioning equipment. There is a minimum of 5 complete air changes every hour. When needed, outside air is drawn in through roof-top louvers and cleansed by Honeywell Electronic Air Cleaners. It is then circulated gently throughout the building from under-window units and through perforated ceiling acoustic tile.

In the new Shell Oil Building Honeywell Electronic Air Cleaners save money while keeping air c-l-e-a-n . . . Honeywell could do the same in your premises

Shell Oil employees breathe the cleanest air in Toronto in their new office building. Here's why: The building is equipped with Honeywell Electronic Air Cleaners capable of collecting 95% of all dirt in the air.

Clean air, free from dirt, smoke and grime keeps paint and furnishings looking new longer, reduces need for frequent cleaning and decorating.

The Honeywell Electronic Air Cleaner can do such a complete job of purification it can cut year-round air conditioning costs up to 20%. Here's why: Air that is already heated or cooled can be *cleaned* and recirculated. This reduces the need for "pulling in" large volumes of outside air that may be costly to cool or heat.

The Honeywell Electronic Air Cleaner removes at least 95% of bacteria, viruses and pollen from the air . . . reduces the danger of communicable diseases and allergy discomforts.

Two types of Honeywell Electronic Air Cleaners are available to fit any air conditioning or ventilating system: Field Assembled models which are built and assembled at the factory, disassembled and shipped to job site for erection in the ductwork; and Custom Package models, built with a package-enclosure, tested and shipped completely assembled for installation.

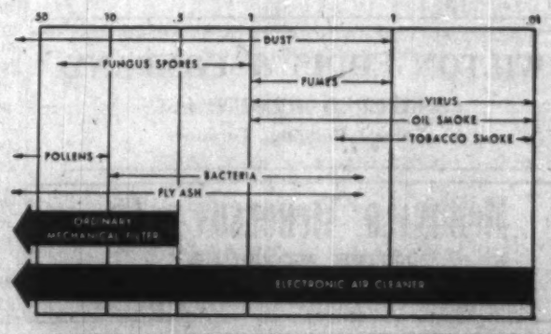
For expert information and assistance in specifying, or installing Honeywell Electronic Air Cleaners call the nearest Honeywell office, or write to Honeywell Controls Limited, *Commercial Division*, Toronto 17, Ontario.

Honeywell

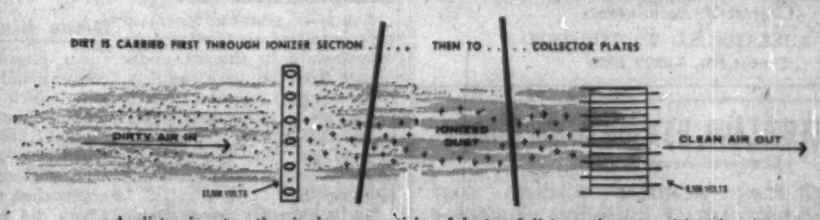
First in Control

HERE'S PROOF—

Common airborne contaminants range in size from 50 to .01 microns. In this area are the major causes of soiling and many respiratory ills. It should be noted that the ordinary mechanical filter removes only part of these contaminants — for practical purposes, very little under 5 microns. But notice the wide range of protection you get with a Honeywell Electronic Air Cleaner. Here you get not only the removal of large coarse particles, but microscopic carriers of many other kinds of dirt and disease, as well.



ENTERING AIR CARRIES DIRT INTO THE *Electronic Air Cleaner* IN THIS DIRECTION



As dirty air enters the air cleaner, particles of dust and dirt are given a positive electrical charge. The dirty air then passes over collector plates which have a negative charge **and collect all the dust and dirt particles . . . just as a magnet attracts iron filings.**

Profits for You In These Ideas?

Looking for new opportunities to add new manufacturing lines?

Here's a current list of new ideas, compiled by the Industrial Development Branch, Department of Trade and Commerce, Ottawa. They range from eavestroughing to air vibrators and children's wear.

Here's the list:

Eavestrough

A new type of eavestroughing, designed in New Zealand, is claimed to cut costs approximately in half. Constructed of metal or plastic, the product is applied at the time of construction—eliminating the need for a separate fascia board, and providing support for soffit panels under the eaves.

The inventor is offering the North American manufacturing rights, on a per foot royalty basis, to a Canadian firm. The Canadian patent is pending. Further information is available by writing to the Canadian Commercial Secretary, 7th Floor, Berger House, 82 Elizabeth St., Sydney, Australia. — Item No. 1032.

For further information on these items, write B. R. Hayden, director, industrial development branch, Department of Trade and Commerce, Ottawa. Item number should be quoted.

Plywood Pipe

A German manufacturer of plywood pipe is seeking a Canadian plywood molding firm as a licensee. The pipes have demonstrated certain advantages for use as air ducting in mines and considerable technical information is available on this application.

Beech veneer or wood could be provided from Germany, because of its special properties for this application, or Canadian woods could be tested for the purpose. A number of other molded products made by the German firm might also lend themselves to manufacture by the Canadian affiliate. — Item No. 1033.

Vibrators

A Belgian manufacturer of vibrators, vibrating feeders, and vibrating screens seeks a Canadian licensee. The equipment can be used for a variety of feeding and blending operations in iron, chemical, and food processing plants, and in quarries and mines; it can also be combined with weighing equipment.

The manufacturer is prepared to provide technical information, drawings and special parts. Pamphlets (in French) and other information are available on loan.—Item No. 1034.

Air Dryers

An American firm is offering chemical drying materials, drawings and application information for the manufacture in Canada of its line of two-stage dryers for compressed air. According to the leaflet, these dryers can provide "instrument quality", clean dry air, for all the output of a compressor, or for the air to certain applications only.

The unit is located in the plant supply line, after the usual air receiver. Maximum working pressure of standard units is 200 psig.

"Entering air is channeled into a centrifugal funnel at increased velocity affecting complete removal of all free moisture and other contaminants which accumulate in the bottom of the unit for draining. At this point, only vapors remain. Air then passes upward via an inner chamber into the desiccant bed. Vapors are attracted to (the desiccant beads), slowly causing dissolution of same, forming droplets which fall to the bottom of the unit."

New drying beads are added several times a year; this material would have to be obtained from the American firm.—Item No. 1035.

Pneumatic Vibrators

A line of vibrators operated by compressed air is offered for manufacture in Canada under license from the American firm. In these units, vibration is generated by a rolling ball driven in an orbit by a jet of compressed air. The ball rolls on adjustable runways of hardened alloy steel.

Various models are available to allow mounting in positions best suited to vibratory needs. A wide range of sizes suits this vibrator to requirements from very tiny bins to huge storage bunkers. The range of application is similar to that outlined for the electrical vibrators described in item No. 1034. Illustrated leaflets available on loan. —Item No. 1036.

Picnic Chest

A lightweight, insulated food container is offered by a British firm for manufacture in Canada. The container, in 1½-cu.-ft. and ¾-cu.-ft. capacities, is made of light-gauge sheet steel, with tinned steel inner container; the insulating material is expanded polystyrene.

The manufacturer can provide certain metal component parts, as well as drawings for manufacture and assembly. Pamphlets, specifications and results of tests are available on loan. — Item No. 1037.

Children's Clothing

A leading American manufacturer of infants' and children's lingerie and sleep-wear wishes to have its lines manufactured in Canada under license. Designed for children from six months to 16 years, these lines are already known and sold in Canada.—Item No. 1038.

Window Cleaner

A window cleaning paste removes oil and dust film from automobile and bus windows, and, applied inside, prevents dimming and frosting in wintertime. The German manufacturer seeks a Canadian licensee to manufacture the product on a royalty basis.—Item No. 1039.

Washroom Partitions

An American manufacturer of toilet partitions wishes to have his lines made in Canada. This firm is also the manufacturer of the compressed air dryer described in Item No. 1035. The partitions are of 20-gauge steel with a paper-type honeycomb filler.

Paint shop facilities for both porcelain and baked enamel finishes would be required. The manufacturer has his own line of hardware, according to information provided. Illustrated leaflet available. — Item No. 1040.

Enquiries about the following cases should be sent to Canadian Patents & Development Ltd., National Research Building, Sussex St., Ottawa. Please quote case number.

Protective Circuits

An overload protection circuit for those transistor circuits wherein transistors are paralleled to provide sufficient current capacity. Unlike previous protective circuits this invention does not merely limit the total current through a group of transistors but operates if any particular transistor conducts an excessive current. — Case No. 2799.

Magnetic Memory

A coincident current magnetic core memory for digital computors in parallel operation. Information is stored in such a way that each core need be threaded by wires in two perpendicular directions only. This construction requires considerably fewer solder joints and is well adapted to semi-automatic techniques. Replacement of damaged cores is easy. Readout circuits may be simpler because the wiring almost eliminates spurious signals. — Case No. 2805.

Memory Jig

A jig for making magnetic core memory planes like those of Case 2805. The device eliminates the skipping of cores during wiring and minimizes core damage. A number of memory planes can be wired and soldered simultaneously. Also described is a device for automatically filling the jig with cores. — Case No. 2806.

Diode Ring Circuit

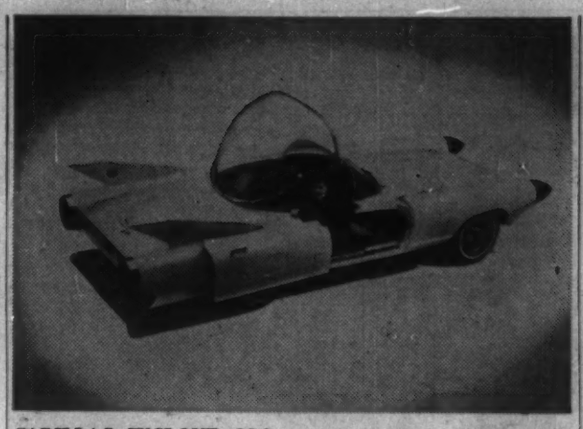
An improvement upon the conventional diode ring modulator which increases efficiency by eliminating all backward current flow through diodes when they are cut off. Modulator efficiencies of 100% can be approached with this invention, which can be constructed with either semiconducting or vacuum tube components.—Case No. 2795.

Oxidizing Wax

An improved process of oxidizing high molecular weight hydrocarbons, particularly paraffinic hydrocarbons, resulting in improved soap-containing mixtures and purified soaps or fatty acids. With this process the soaps or acids can be separated from unoxidized residuum without having a separate saponification stage and therefore the high pressure saponification stage equipment can be eliminated.

These soaps may be used in the manufacture of detergents, wetting agents and special greases with unusually high drip points. High-temperature greases with no drip point may be made directly from paraffin wax, which would be very useful for wire rope lubrication.

The process may also be used to simply modify properties of paraffin wax to provide a softening range of temperature rather than a single melting point; this could make possible heat sealing of wax papers and other applications involving sealing with wax. — Case No. 1983.



CADILLAC CYCLONE, 38th experimental car developed by General Motors since 1938, will be one of the attractions at the GM Motorama for 1960 in Toronto which opens this week. The two-passenger, steel-bodied Cyclone has a one-piece, laminated plastic passenger canopy that's power-operated and silver coated to deflect the sun's rays. When either door is opened, the canopy lifts automatically. When not in use, it folds back and disappears.

New Pep Ahead For Alberta's Seed Oil Area

Procter & Gamble is exploring the vegetable oil potential now. And there's talk of a shortening plant . . .

From Our Own Correspondent

LETHBRIDGE—Canada's end use processors of vegetable oils have focused attention on Lethbridge and Southern Alberta.

The result: Watch for an unprecedented step-up in oil seed crops in the southern part of the foothills province in 1960, and the establishment of a shortening plant here.

First to explore in detail the vegetable oil producing and refining potential of the area: **Procter & Gamble**, one of the nation's largest end use processors of the product.

For several weeks now, negotiations have been going on between Procter & Gamble and **Western Canadian Seed Processors Ltd.** of Lethbridge, the firm that has its fully integrated $4-million oil seed processing plant nearing completion.

While negotiations are still described as "only in the discussion stage," the proposals are being made on the basis that Procter & Gamble will purchase the entire production of Western Canadian Seed Processors Ltd.

Top officials from Procter & Gamble have been in Alberta studying the situation. Blue prints of the Lethbridge plant's layout and equipment have been disclosed to P & G.

A team of technicians are scheduled to pay a return visit. Quality of product appears to be P & G's main concern.

Western Canadian officials point out, however, that the refining equipment being installed in the Lethbridge plant is Girdler, the same type that P & G has in its plants in Eastern Canada.

Western Canadian's extraction equipment, already installed, is capable of handling up to 200 tons of sunflower seeds in a 24-hour stream day.

Initial capacity of the upgrading and edible oil refinery will be 60 tons of crude oil daily, the amount normally available from the extraction process and capable of being expanded to double that capacity if demand warrants.

It's also pointed out that while sunflower is to be one of the main crops, safflower, rape and soya beans will also be processed.

This is how the project will most likely work:

Western Canadian will continue to contract with farmers for vegetable oil seed crops and the company will also extract the crude oil from the seed.

Procter & Gamble technicians will then pick up the crude oil and process it through to the end use product.

The refinery portion of the fully integrated plant will still be owned by Western Canadian, but it will be operated by P & G on a basis to be worked out.

This arrangement also means that an end use processing plant and packaging and warehousing facilities will be built in conjunction with the present plant.

Trackage and site for such an expansion are now at Western Canadian's disposal.

The Lethbridge plant will take the oil through to the hardening stage ready for manufacture into shortening or other edible uses.

Procter & Gamble has conducted five surveys during the past 13 years with a view to establishing production facilities in Western Canada. Sites from Vancouver to Winnipeg were considered.

These surveys were, however, carried out on the basis of importing raw materials, and it wasn't until Western Canadian came into the picture recently that Southern Alberta's potential for producing oil seed bearing crops was realized.

While Procter & Gamble has been the first to explore the situation in detail, several other large end users of refined vegetable oils are known to be keenly interested.

With locally produced raw materials in the picture, more than one end use manufacturer has conceded that savings in freight alone makes a Lethbridge venture worth while.

Predictions are that the Southern Alberta sunflower acreage may well be triple this year's 17,000 acres.

The first and second issues of Western Canadian common stock, totaling 500,000 shares each at $2 and $2.25 per share, have been fully subscribed.

Sale of the third issue of $2.50 stock is now well under way.

Western Canadian is arranging, meanwhile, with a chartered bank to finance raw materials.

This year's crop was practically all harvested, with yields varying from 850 lb. per acre on dry land to 2,800 lb. per acre on irrigated land.

SELECTED GROWTH STOCKS

This is an exclusive series on 26 Selected Growth Stocks chosen by one of the continent's most prominent and successful investment advisers. Each company will be reviewed here quarterly. This series does not constitute a recommendation to buy.

B-A Oil's Full Year Earnings Should Reach $1.20 per Share

- *Sales gains tempered by low prices . . .*
- *Asbestos Corp. profit lower than '58 . . .*

By NESTOR

BRITISH AMERICAN OIL CO.'S operating results for the second half of this year will likely show a slight increase on first half results and will be about 20% above the final six months of 1958.

Apart from seasonal increases in product demand which usually occur in this period, earnings should benefit from the easing in the price war between gasoline retailers.

First-half earnings, subject to audit, amounted to $8,396,000, equal to 41c per share, an increase of 19.3% over the corresponding 1958 period.

The indicated 20% year-to-year gain in second half earnings would lead to net for the full year of around $24-$25 million (about $1.20 per share vs $1 last year).

A major factor in improved first-half earnings was a substantial increase in sales of crude oil, condensate, gas and gas products.

Volume of refined products sold was up 6.3% and crude oil processed by company's refineries increased 26.1% over same period last year.

The improved sales picture continued into the third quarter, but the benefit of higher sales was tempered by the low prevailing selling price structure, President E. D. Brockett said in his quarterly report.

Company's indicated daily net crude oil and condensate production in Western Canada during the first nine months was 34,000 bbl., an increase of 10% over corresponding 1958. Crude production in the fourth quarter is expected to be slightly below this level.

Total crude runs through B-A refineries in the first eight months was nearly 21% above the like 1958 period.

Highlight of third quarter drilling operations was completion of the BA-CPR-Atlas development well in the Dick Lake field.

Productivity tests of this well obtained a top gas flow rate of 81 million cu. ft. daily at the wellhead flowing pressure of 735 lb. sq. in.

In the U. S., net crude oil and condensate production of the **B-A Producing Co.** for the first nine months averaged nearly 27,000 b/d, down 7% from a year earlier.

At recent market price of $32, common stock is 7% above UV level ($30), could rise 103% before reaching OV level ($65). Price is 26.7 times estimated 1959 earnings of $1.20 per share. Yield is 3.13% at indicated annual dividend rate of $1 per share. Price this year has ranged between a high of $44½, a low of $31¾.

• • •

ASBESTOS CORP. earnings for the full year 1959 will definitely be lower than the $2.29 per share earned last year, **FP** understands.

While company's shipments by the year-end will be as high as or slightly higher than 1958, costs have increased in 1959 and competition within the industry remains keen.

For the industry as a whole, market both in the North American continent and overseas has firmed considerably.

Canadian asbestos shipments for the nine months ended Sept. 30 at 757,287 tons were 15.5% higher than 657,086 tons shipped in corresponding 1958. Individual producers have not benefited to a corresponding degree, as there are now several more asbestos producers in this country than there were a year ago.

The steel strike, industry officials say, has not seriously affected shipments of Canadian asbestos. Major cutbacks in auto output would hurt shipments but presumably these could be made up later when improved steel supplies permit higher production rates.

A substantial proportion of Asbestos Corp.'s total output is sold overseas where demand — for the most part only termed fair this year—has now begun to show some improvement.

Russian fibre offerings on the Western European market at prices as much as 15% to 20% below world levels have resulted in severe competition and weak prices.

Indications are that company will face further cost increases next year because of higher wages. Company's current labor contract expires at the end of this year.

Negotiations for a new contract are scheduled to get under way in a few weeks. The union, undoubtedly, will be asking for more money and other benefits.

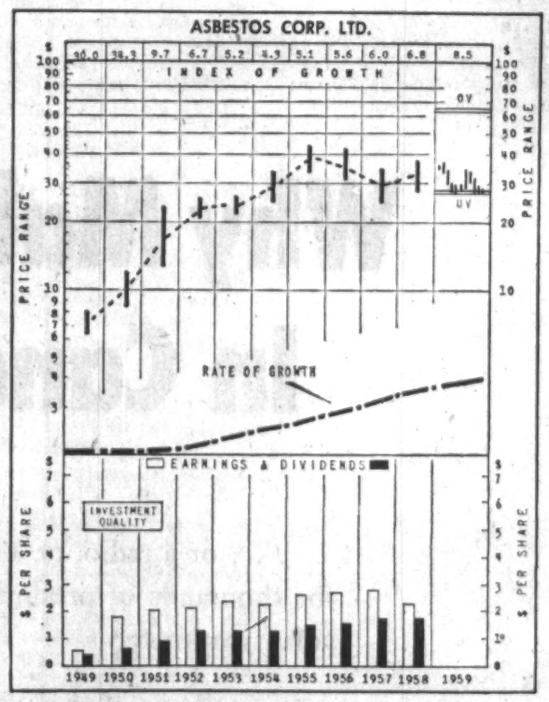
In line with lower earnings, company this year is paying out less in dividends to its shareholders than it did last year.

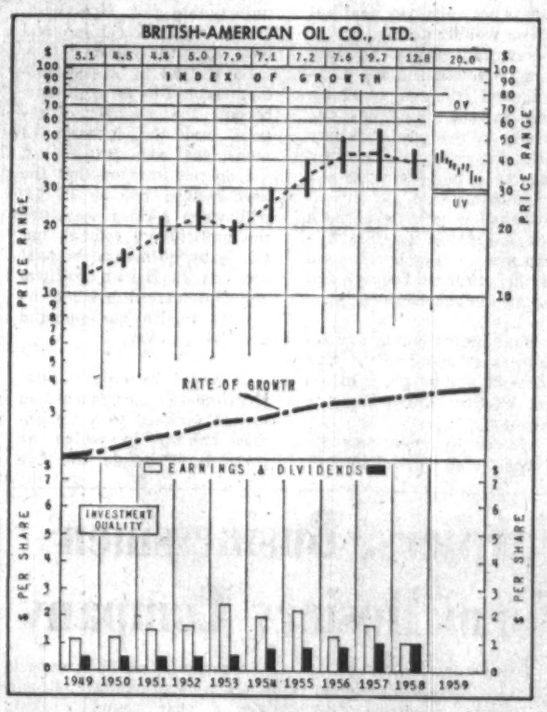
Last week directors declared the regular 30c quarterly dividend along with a 20c year-end extra. This compares with 30c plus 70c extra paid a year ago.

Offsetting factor is that in the fourth quarter of last year company raised its quarterly dividend rate from 25c to 30c.

In 1958 company paid a total of $1.75 per share. This compares with $1.40 per share this year.

At recent market price of $27½, common stock is 2% below UV level ($28), could rise 133% before reaching OV level ($64). Price is 12.0 times 1958 earnings of $2.29 per share. Yield is 5.09% at indicated annual dividend rate of $1.40 per share. Price this year has ranged between a high of 36½, a low of $27.





How to Read Nestor's Special Stock Charts

INDEX OF GROWTH: The rate at which the value of the equity behind the stock is doubling as determined by the growth rate at which it entered the year. A figure of 5.6 for the present year would indicate that at its current growth rate the equity value is doubling every 5.6 years.

PRICE RANGE: The annual high low and mean price Monthly ranges for the current year.

UNDERVALUATION AND OVERVALUATION PRICE LEVELS. Shown by the narrow horizontal lines above and below the stock's price range indicating price at which the particular stock is adjusted as underestimating or overestimating its future rate of growth. A stock showing a fast growth rate will sometimes anticipate growth by two or three years. In this case it may not be so attractive a purchase relatively as some other fast-growing stock that is not anticipating its growth beyond the immediate present. Other factors such as rate of growth and investment quality will also enter into the comparison an investor will want to make.

Without these UV or OV levels a current quotation of, say, 55 or 75 would carry no significance regarding long-range value. The UV/OV levels also permit judgment as between one stock and another. They are not designated points of purchase or sale nor do they attempt to show what will be a stock's bottom or top figures in any given year.

RATE OF GROWTH: The rate as based on Nestor's tests at which the company is showing underlying or long-term growth. This will determine the price trend of the company's common stock over a period of years and in most instances the trend of dividend payments.

**Background and principles behind the selection by Nestor were discussed in a special article in FP, Jan. 10, 1953. A limited number of reprints are available on request.*

Public Utilities

CONSUMERS' GAS CO., Toronto, consolidated net profit of $4,057,045 for year ended Sept. 30, 1959 was 56% higher than previous year's $2,596,623.

Total volume of gas sales was 29,290,240 mcf. Commercial gas sales increased 45%, reflecting the higher degree of acceptance of natural gas.

Increased revenue from sales, due to the abnormally cold winter, offset the effect of slower development in residential building during the year. The company is concentrating sales efforts on existing housing and new uses for its fuel.

In February, 1959, the company sold $10 million 5½% cumulative preferred shares, $100 par, series B. The expansion program has been financed principally through short term loans. Long term issues have been discouraged by the difficult money market conditions, President A. L. Bishop reports.

New equity and long term debt issues will be required to meet the need for expansion.

The propane-air gas distribution system of Peterboro was acquired in February, 1959, for $1,302,000. The system was subsequently converted to natural gas. Also acquired was **Shorgas Ltd.**, a bottled propane distribution company.

Initial deliveries of Western Canadian natural gas were made to the company on Oct. 27, 1958.

Newly formed U. S. subsidiary, **St. Lawrence Gas Co. Inc.** has received franchises from 17 municipalities in northern New York state for the supply of natural gas.

La Corporation de Gaz Cartier, in which the company has controlling interest, plans to distribute natural gas in Eastern Quebec. A 437-mile pipeline is proposed.

Delivery of natural gas has recently commenced to **La Societe Gazifere de Hull, Inc.** Consumers' provides technical and financial assistance and management services.

Another rate reduction, effective Oct. 1, 1959, is expected to result in savings of approximately $500,000 to customers.

Capital expenditures for the year totaled $23,650,000. This included construction of 36 miles of transmission lines to serve Bradford, Stouffville, Uxbridge, Camp Borden and Port Dalhousie.

The company sold to **Union Gas Co.** at cost the transmission and distribution facilities constructed to serve Owen Sound, Meaford and Thornbury.

Letter from London

Inherited wealth ends another promising career in politics . . .

By ADELPHI

IT IS in keeping with the present buoyancy of life in Britain that a number of large employers, acting independently of each other, have made a modest reduction in hours for their manual workers.

The most recent addition to these industrial benefactors is the **Ford Motor Co.** which has decided to reduce its standard week from 42½ to 41¼ hours without loss of pay.

The chairman of the company is Sir Patrick Hennessy whose sad, gentle smile has always suggested that if he had not been a tycoon he would have been a poet.

Some 40,000 Ford workers will go up in their rate of pay and, no doubt, will show their gratitude by purchasing cars that have come off the delivery line of their own company.

However, as the poets have proclaimed, sunshine is eventually followed by rain. There is a threatened strike at the Oxford plant of **Nuffields** which makes the metal products that in turn become the car bodies.

But on the whole there is an admirable restraint in labor relations and the U. K. is remarkably free from industrial troubles.

* * *

On the international front it was unfortunate that Sir Winston Churchill was not well enough to take any part in the welcome to Dr. Adenauer on his visit to London.

One or two self-styled specialists on foreign affairs thought that Churchill meant it as an affront which, as Euclid would have said, is absurd.

The truth is that Sir Winston is not only very deaf but is also wobbly on his legs.

Nevertheless his presence lends distinction to any occasion, and when he takes his seat in the Commons the people in the public gallery risk their necks in their eagerness to look upon the great man.

Adenauer will never be a political idol in the Churchillian sense, but he is respected for his stubborn courage and for his undoubted integrity.

* * *

That indefatigable ambassador - extraordinary, the Duke of Edinburgh, is off on yet another Commonwealth journey.

He is to represent the Queen on an official tour of Ghana, the first all African territories to become independent within the Commonwealth.

The pessimists point to India and say that independence may be worth dying for in principle, but usually it increases the problems of the beneficiary state.

The unfortunate Pandit Nehru is quoted as the statesman who realized his dream of independence and, in the process, brought his people to disaster and disillusionment.

Once more, however, we must pay tribute to the Duke of Edinburgh. He is a dedicated man and has won both the confidence and the affection of the people who make up the British family of nations.

* * *

There are few of us on this terrestial sphere who have not at some time been troubled by money, or the lack of it.

The newest example is Lt.-Col. Robert Grosvenor, MP, who has just announced his resignation as parliamentary private secretary to Selwyn Lloyd, the Foreign Secretary.

Col. Grosvenor is a middle-aged man with a political future who sees his prospects failing because he just has too much money.

He and his brother Gerald stand to inherit the bulk of the estate of the late Duke of Westminster.

And just to show the size of the whole affair, let me point out that the Westminster estate, before death duties have done their ghoulish work, amounts to a sum balanced between £40 and £50 million.

"There are just not enough hours in the day," said the unfortunate Col. Grosvenor, "to do my political job and look after the estates."

So instead of a political-diplomatic life he will now become the manager of estates and the investor of money that belongs to a trust.

I do not imagine that the hard-headed readers of **FP** will weep serious tears for the unfortunate colonel, but this is by no means the first occasion in British political and diplomatic life when inherited wealth has ended a promising career.

* * *

It would be only natural if Prime Minister Macmillan looked forward to a Christmas holiday in which he could sit beside the fire and listen to the family chatter of his children and his children's children.

But it is literally true of this astonishing man that his work is never done. Just now he is planning an African tour to begin probably in January.

He intends to take in East, West and Central Africa and hopes to meet Africans of all hues and opinions.

Such intentions are admirable and much to be commended but, unlike the Pope who extends his authority without ever leaving the Vatican, Macmillan becomes the Prime Minister who is always leaving his political headquarters.

* * *

There is nothing that British parliamentarians enjoy more than a full dress debate on their privileges and their duties as legislators.

Therefore, there was a full attendance when the House debated the unexpected action of Speaker Morrison who had hardly resigned his parliamentary post when it was announced that he had accepted the invitation of Premier R. G. Menzies to be the Governor-General of Australia.

This, according to the critics, was equivalent to getting the best of both worlds.

In other words Mr. Morrison (now Viscount Dunrossil) will draw half his U. K. parliamentary pension of £4,000 a year and at the same time receive the pay of a governor-general.

One thing is certain: "Shakes" Morrison will be an immense success in Australia even though he has a passion for reciting Burns poems.

Farmers, Businessmen Form Hosiery Company

From Our Own Correspondent

WINNIPEG — Residents of the town of Stonewall, 18 mi. north of Winnipeg, wanted an industry of their own and got it.

Helped by their Chamber of Commerce, businessmen and farmers subscribed $40,000 to organize **Stonewall Hosiery Mills Ltd.**

With a $30,000 loan from the Manitoba Development Fund and machinery contributed by **Lincoln Hosiery Co.**, St. Catharines, Ont., they provided a building and are preparing to start early next year.

Four units are to be placed this winter and two added next summer.

The plant will manufacture full fashioned nylon hosiery.

The town followed the lead of Teulon, 21 mi. north, which started a factory in 1957 to produce seamless hosiery, operating it as an affiliate of the St. Catharines company.

It started with production of 600 pairs per month and is now turning out 3,000.

The Stonewall mill, when completed, will be larger. At the start it will employ 20.

At capacity, which it expects to reach next summer, it will have a year round working force of 40-50, all to be recruited locally.

ANNOUNCEMENT

NAMED PRESIDENT

MR. L. W. LAWSON

The appointment of Mr. L. W. Lawson as President and a Director of Canadian Food Products Limited has been announced by the Company. Formerly Executive Vice President and Managing Director of The Glidden Company Ltd., Mr. Lawson succeeds Mr. E. J. Spence who has resigned to assume new responsibilities. Canadian Food Products Limited operates Honey Dew Coffee Shops, Muirheads and Childs Restaurants, Woman's Bakery and Hunts bake shops as well as Picardy Shops and the largest industrial and institutional food service organization in Canada.

...they're natural partners!

Integrated Data Processing — IDP — is the modern *automation* method of mechanizing paperwork. By a single typing, paperwork can be integrated between locations through teletype. Thus, with IDP and BELL TELETYPE you can distribute data (orders, reports, etc.) across the city or across the country through one simple operation.

Moreover, this time-saving method is based on today's modern "mechanical languages", so the punch tape shown here can actuate many different types of business machines, increasing still further the usefulness of IDP.

With maintenance service as close as your local telephone office, BELL TELETYPE equipment is your dependable communications component of IDP systems.

Consult Bell communication specialists on how data processing can be integrated between offices, factories and warehouses.

For the booklet "BELL TELETYPE'S Place in Your IDP Program", write or phone (collect) to:
MONTREAL — 1060 University St. Tel.: TR 0-2981

THE BELL TELEPHONE COMPANY OF CANADA

Why Make a Nail In Canada . . .

. . . or a radio, or a stove, or a car, or any of the thousands of products manufactured by Canadian workmen?

By making these things ourselves, we have earned a standard of living admired throughout the world. Nearly half of all employed Canadians work in manufacturing. Without our factories we would be principally employed in producing raw materials for other nations to process.

We enjoy our present way of life because we work not only on the land but also in modern factories.

One way to maintain this is to buy Canadian-made goods.

THE STEEL COMPANY OF CANADA, LIMITED

THE FAIREY CO.

MR. G. W. HALL ON PROBLEMS OF AIRCRAFT INDUSTRY

The Thirty-First Annual General Meeting of The Fairey Company Limited was held on 19th November in London, England.

Mr. G. W. Hall, F.R.Ae.S. (Chairman and Managing Director) in the course of his speech, said:

The net profit of the Group, after deducting the provision for taxation and the interest of the minority shareholders, is £98,343. After adding back losses, less profits, for the year carried forward by subsidiary companies and bringing in the balance of profits brought forward from 1958, there is an amount available for appropriation of £251,945 as against £735,860 last year.

In the Group Balance Sheet under the heading "Current Assets" cash has increased from £1,923,481 to £2,645,236, and I should mention in respect of this that shortly before the year end a major deposit amounting to £1,212,500 was made against the Indonesian contract.

Basically, our aviation activities have continued satisfactorily but on a diminishing scale. The Gannet 3, which is our current production type, has proceeded in a most satisfactory manner, and you will be pleased to hear that this aircraft has completed its development trials and obtained its C.A. Release. In the hands of 700 G. Squadron of the Royal Navy, the Gannet 3 has completed an intensive flight programme—over 1000 hours were achieved in 9 months with 3 aircraft. This, we believe, is a record in itself and establishes without doubt the qualities of the aircraft.

Further to this, we obtained a valuable contract from the Indonesian Government for the supply of 18 Gannet aircraft of the earlier version, for use in this instance as a general purpose aircraft.

We are making steady progress with our Hydraulics developments, particularly with our Power Controls. It is interesting to note that all the Service aircraft taking part in the aerobatic displays at the Farnborough Air Show this year were fitted with Fairey Power Controls.

Fairey Air Surveys Limited had a moderately successful year, with widespread operations covering a number of countries throughout the world. The volume of air survey business available at the present time appears to be increasing, and we see no reason why our air survey activities should not benefit accordingly.

Operations in Canada

Whilst discussing Fairey Air Survey, I might also refer to Aero Surveys Limited of Vancouver, which has until recently been jointly owned by ourselves and Fairchild Aerial Surveys, of Los Angeles. Since the end of the year, negotiations have been completed by which we are acquiring the Fairchild interest, so that Aero Surveys will once more become a subsidiary company. Prospects for air survey in Canada appear to be good, subject to the problems of weather which is always a hazard.

The Canadian Company has had another successful year, although profits were less than in the preceding year. Following a reduction in the amount of work available from the Canadian Armed Forces, efforts have been made to obtain commercial work, with a good measure of success. On the West Coast the Company recently received a contract for the conversion of a number of Martin Mars flying boats for forest fire fighting. On the East Coast the Company is building a large maintenance hangar at the new Halifax International Airport in order to be in a position to obtain additional work on large aircraft.

I will now make some general comments on the problems facing your Company.

The changing conditions have been a matter of grave concern to your Board, and every effort has been made to find solutions to the many difficult and complex problems which have arisen. Our constant aim is to safeguard your investment and to protect the interests of the many thousands of employees who have given and still give loyal service to your Company.

Your Board have made great efforts, not only to enter the field of civil aviation, but to diversify into other sections of industry where our skill and knowledge can be applied.

The Rotodyne

Our main interest in this field is the Rotodyne—a project which has been much in the public eye since we first demonstrated it successfully. From that moment, both at home and abroad—and I may say particularly abroad — the potential of this entirely new type of passenger or freight carrier has been recognized both by Civil operators and Military users, as a vehicle of unique value.

At this moment we are within a few weeks of the signature of a development contract which would ensure the Government supporting us to the extent of some four million pounds. Again, as we stand today, there would appear to be every probability of our receiving an order for Military Rotodynes plus the requirement for an initial six from B.E.A., for which we have received a Letter of Intent. I must inform you, however, that this is not yet a firm order and that negotiations with B.E.A. are still proceeding.

We feel that much of the delay I have just referred to arose from the fact that no one Minister was responsible for the research and development needed for civil aviation and the co-ordination of military and civil needs. We hope that the setting up of the Ministry of Aviation will lead to great improvements in this field.

Unfortunately, our problems have been accentuated during the past few weeks, as since the return to power of the Conservative Government it has again been made clear to me, and to the others who hold similar positions in the Industry, that the Government require that the aircraft industry as a whole must undergo a very severe change. With a reduction in military requirements for manned aircraft, and in view of the greater technical resources and the greater private finance required for the newer projects, the Government are insistent that companies must merge. It is difficult in the extreme, in all the prevailing circumstances, to decide at such a moment whether one should persist with a project as large and as complicated as the Rotodyne, which could very well have an immense effect upon the future of your Company, and the financial position of your Company over the next six or seven years, without a clear and sufficiently large Government order. A home market is essential to stimulate and encourage foreign orders and consequent export.

The report and accounts were adopted.

European Roundup

NEWS FROM THE BUSINESS CAPITALS OF EUROPE...

By ERNEST WAENGLER

THE GOLD and dollar reserves of Western Europe have reached such a high level that further liberalization of dollar imports becomes imperative.

This decision was reached by the Committee for Economic Policy of OEEC in Paris when it turned out that, for the first time, the 17 member countries' hard currency reserves have reached the point of their combined dollar import requirements for six months.

The extent of liberalization will depend on the continued economic expansion of the countries concerned.

Henceforth, the committee will sit three times a year to work out plans for the co-ordination of members' economic policies.

These plans are to be based "on an equilibrium of long-term growth, stable prices and external payment balances".

* * *

France, whose gold and dollar reserves are approaching $2 billion, announces that it will abolish, by the end of 1959, the import duties for a number of foodstuffs and the import quotas on many other types of goods.

Vegetable, olive oil, canned meats and beer of low alcoholic content are among the goods that will be admitted duty-free regardless of origin.

Certain agricultural equipment, home appliances and textiles are being freed from import quotas.

In many cases, however, these imports can only be effected at certain maximum prices that lie below the French prices for similar goods.

* * *

In Greece, the Foreign Trade Council announces that the import quotas for several types of goods may now be exceeded "in certain justified cases", provided the goods originate in Canada, the U. S. or the OEEC countries.

The Minister of Trade is empowered to grant additional import licenses at his discretion.

Included are frozen meat, lumber, newsprint, coal, iron, sewing machines and certain electric appliances.

* * *

Soviet competition in Western Europe is making rapid progress, though still in a comparatively small volume.

In the first half of 1959, West Germany imported from the Soviet Union for $38 million, compared to $20 million for the same period last year.

West German exports to Russia decreased from $21 million to $16 million.

* * *

Yugoslavia, too, hopes to start competing more effectively in the West, though it is still fighting a losing battle against a staggering trade deficit.

In the first half of this year, Yugoslav imports were 58% higher than exports. This is a little better than last year's 73% deficit, but far from satisfactory.

Most Yugoslav foreign trade is in the form of bilateral barter, a method more popular in the Soviet block and Near East than in the West.

As a result, Yugoslav exports are being forced in that direction.

Low productivity is given as the chief reason for the difficulties.

Through more mechanization, more realistic currency regulations and increased tourism Yugoslavia is trying to find a way out of one of Europe's most desperate economic situations.

* * *

France wants to decentralize her industries which at present are concentrated in the Paris Basin.

To facilitate the transition, several banks and insurance companies have formed a "Society for the Decentralization of Industries in the Paris Region" (SODIRP) which will give technical and financial assistance to firms wishing to move plants to less densely populated regions in France.

The reasons have mainly to do with the housing shortage in and around Paris and the lower living standards in rural regions.

* * *

Italy is able to report a 3.2% increase in exports and a 1.3% decrease in imports compared to last year. For the first seven months of 1959, the trade deficit has gone down by 17.2%, to $35 million.

In the same period, nearly $200 million flowed into the Italian economy in the form of foreign loans and investments.

* * *

Netherlands welcomes the establishment of foreign branch plants, particularly those which contribute to the country's export trade.

U. S. subsidiaries in the Netherlands are at present exporting about 80% of their total production, not taking into account the petroleum industries.

There are now 102 U. S. subsidiaries in the Netherlands, representing an investment of over $200 million.

Their share of total Dutch exports last year was 5%.

A report from The Hague emphasizes that they are "harmoniously integrated" into the country's economic life and that there is a fruitful exchange of technical know-how.

Canadians are often criticized for being too slow and timid in establishing Western European subsidiaries.

Experience Counts In Store Selling, Reach Peak in 50s

Do older retail sales employees reach a higher performance rating within a shorter time period than younger people?

A new study by federal Department of Labor suggests this is so.

The study, "Age and Performance in Retail Trade," also makes these points:

- **Older employees** perform as well or better than younger staff.
- **Performance** improves with age, within limits.
- **Peak** is reached between ages of 51 and 55.
- **Performance** tends to improve with experience and service.

Store supervisors believe it takes new clerk three to six months to reach a "reasonable level of sales competence".

ANNOUNCEMENT

CHARLES NEWBURY, B.Sc.

V. Murgoski, President of Research Development & Surveys Associates, announces the appointment of Charles Newbury, B.Sc., as a Senior Associate in charge of the newly formed Combustion & Pollution Division.

Mr. Newbury has had wide experience in combustion and pollution problems holding the position of Fuel Efficiency Officer for Imperial Chemical Industries at their Billingham site, Senior Fuel Engineer for the Ministry of Fuel and Power at their Fuel Efficiency Branch Headquarters in Whitehall, and recently Assistant Director at the Ontario Research Foundation while in charge of the Foundation's Pollution Laboratory.

Compton Buys Nickel, Sells Canada Cement

Compton's manager has added 10 shares of **International Nickel Co.** to the 15 shares already in his client's portfolio.

The stock was purchased Nov. 20 at $97 a share for a net outlay of $975.

To help finance this purchase, the manager on the same day sold 25 shares of **Canada Cement Co.** at $32 a share, netting the account $790.75 and eliminating this security from the portfolio.

As a result of this transaction, Compton's annual income in prospect has been increased by $5 to $1,336.

Earlier this month, International Nickel declared an extra dividend of 40c per share together with the regular quarterly dividend of 65c, payable Dec. 21 to shareholders of record Nov. 23.

A detailed statement and comment on this switch in the Compton portfolio will appear in **FP** in the manager's next monthly report.

STORAGE RACKS

Sunshine Waterloo Co., Waterloo, Ont., is now manufacturing and distributing under sole rights for Canada "Slide-n-Lock Adjustable" storage racks. More than 800 different sizes and capacities from five basic parts, for storage of drums, packages, rolls, on skids, in bulk and on pallets, are offered.

U.K. Takes Two Big Steps To Supersonic Supremacy

MONTREAL (Staff) — The U. K. aircraft industry has taken two important steps toward being first with a supersonic airliner to sell.

Two new research aircraft are being built to investigate the mysterious problems that surround sustained flight at speeds greater than sound.

It is generally held that the first planemaker to offer a supersonic airliner that is a practical operational machine could win hundreds of millions of dollars in orders.

If a company miscalculates, the research investment lost would be enough to cripple even the biggest.

The British, therefore, are approaching the project on a national basis (**FP**, Sept. 19).

Groups of companies are working together already on less ambitious designs and there are indications that virtually the whole industry will be called into building any supersonic airliner.

British designers are faced with tougher problems than either the Russians or Americans — the only two other potential contenders in the race.

Russia and the U. S. have accumulated a considerable amount of military experience with supersonic fighters and bombers.

The U. K. has only one truly supersonic fighter flying and one bomber on the drawing boards. But direct financial backing from the U. K. government could go a long way to offset this disadvantage.

The government has ordered **Handley Paige** to build a research aircraft, the HP115, to investigate supersonic problems on the lower edge of the speed scale.

Bristol has been given a contract to design a very fast research plane, type-numbered 188.

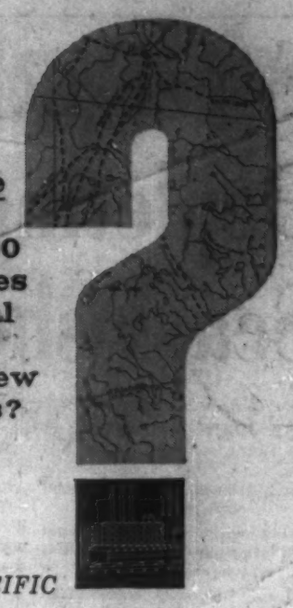
It will be of stainless steel — which many designers think is the best answer to the stresses of extreme heat at speeds over 1,500 mph.

At the same time Britain's aero engine designers are at work trying to produce an engine that will offer power between zero and 2,000 mph — something nobody has done yet.

This sort of news turns airline presidents grey. Faced with the heavy financial burdens of paying for their present jet purchases, most hope supersonics will stay off stage for at least another 10 years.

But they know, too, that competition will force them to buy the new planes the moment they are available.

The objective of being first with a 2½-hour flight across the Atlantic is too tempting to let either industry or operators stop working toward it.



Which one of Canada's 3,850,000 square miles is the ideal location for your new business?

Find out from CANADIAN PACIFIC

If there's a strategic site for your new manufacturing or distributing facilities, we're likely to know about it first. Since the Canadian Pacific Railway first gave economic unity to Canada, every important industrial trend from coast-to-coast has been observed and interpreted by the Canadian Pacific Department of Industrial Development.

For facts on plant sites, power, labour supply, raw material, transportation, market potential and other vital factors, write to any office of the Department. The reply will be prompt, private, and without obligation.

Foreign Ships Depleting Our Sea Fisheries?

From Our Own Correspondent

ST. JOHN'S — Depletion of the fishing banks off Newfoundland and other areas of the North Atlantic is causing a good deal of concern here.

One suggestion: International regulations governing quantities that may be caught.

Today in waters once shared by only a few countries and the Newfoundland fishermen, fleets of more than 20 countries are operating.

Some of them, like the Portuguese, French and Spanish fleets, embrace scores of vessels.

Latest entry: Greece which is preparing trawlers for the North Atlantic.

This autumn for the first time West German trawlers have been fishing off the Labrador coast.

According to officials of the West German Deep-sea Fisheries in Bremerhaven, $115,000 has been appropriated to cover seven exploration trips by commercial trawlers.

Operators will be guaranteed gross daily proceeds of $1,200 to be offset by receipts from the sale of fish caught during their exploratory trips.

This year three trips were made to waters off the coasts of Newfoundland, North Labrador and southwest Greenland. Other trips will be made in the spring of 1960.

Meanwhile, Newfoundland trawlers have been getting only half loads in deepsea fishing operations during the past few months.

Inshore fishing has remained good, and some new records have been set in quantity of fish processed for export.

Many of the European fleets on the north Atlantic are experimenting with new trawlers and equipment. This may be the reason for many breaks in the trans-Atlantic cables.

Previously most fishing was done by ordinary nets which dropped a few fathoms. New equipment goes almost to the sea floor.

ANNOUNCEMENT

CJBQ RADIO APPOINTMENT

FRANK C. MURRAY

The Quinte Broadcasting Company, Limited announces the Appointment of Frank C. Murray as Manager of Radio Station CJBQ, Belleville and Trenton.

Mr. Murray, who has had a wide experience in Canadian Broadcasting and Advertising, is well known in the Quinte District. He commenced his Radio Career at CJBQ in 1947 as an Advertising Representative. He has since been associated with Horace N. Stovin Company, (now Stovin-Byles Ltd.) National Radio Station Representatives in Toronto and Montreal; and more recently with the Maclean-Hunter Publishing Company in Toronto.

FLUORESCENT PAINT

Hyper - intensive fluorescent paint colors, four times brighter in daylight than the most vivid conventional hues, are being introduced by **Du Pont of Canada.** Uses of the new paint are expected to include high-visibility identification and safety marking of aircraft, trucks and buses.

Radiation Can Improve Our Harvest and Foods

Canada must keep in the forefront in research or get lost in the shuffle.

This is what Dr. J. W. T. Spinks, president of the University of Saskatchewan, told the 53rd annual meeting of **United Grain Growers Ltd.** in Saskatoon.

He called for more research in the fields of radioactivity and nuclear energy to determine their best uses for mankind.

Where is the money to come from?

"Any country which can spend hundreds of millions to develop a single aircraft or which spends hundreds of millions annually on each of advertising, liquor and cigarettes, can certainly afford a few hundreds of thousands more for research," he declared.

A few years ago, President Spinks said, we could afford to wait and take things slowly.

"But today, one has to keep to the forefront if one is not to be lost in the shuffle, or lose a great many bright researchers to other countries."

Radioactivity, Dr. Spinks said, is "an extremely powerful tool in attacking problems of interest to agriculture."

It can be used to bring about genetic changes in plants which might lead to crop improvement, he said.

"Crop improvements of only a fraction of a per cent may be worth millions of dollars.

"It is now well known that radiation can induce mutations, or heritable changes, in the chromosomes which determine the characteristics of living organisms," he said.

"Although many of the mutations are deleterious, a few may possess agriculturally desirable characteristics.

"A selection program based on irradiated material will usually proceed more rapidly than one without. Various types of radiation have been used; x-rays, gamma rays, neutrons and electrons.

"One of the most striking results with barley has been the production of stiff strawed varieties, so-called erectoids," Dr. Spink said.

"Other varieties ripen earlier than usual, possess high protein content, and so on.

"Beneficial results have also been obtained in peas, lupine, flax, white mustard (7% higher oil yield) and so on.

"Good effects have been obtained with apples and rust resistance has been developed in oats (Brookhaven); disease resistant varieties of peanuts have been developed by neutron irradiation (North Carolina)."

The use of ionizing radiation in food preservation, Dr. Spinks said, is based on its ability to destroy the micro-organisms and insects which cause food spoilage.

"A satisfactory method of food preservation could help to cut down the enormous annual losses of foodstuffs by spoilage.

"The advantage of radiation is that it does not lead to any appreciable rise in temperature in the material during treatment.

"Also if the material is properly packaged so as to avoid recontamination, the storage life of foods may be extended considerably.

Food value of substances such as beef, beans, corn and wheat is not affected, and the material irradiated is not made radioactive by gamma rays of energy up to a million volts.

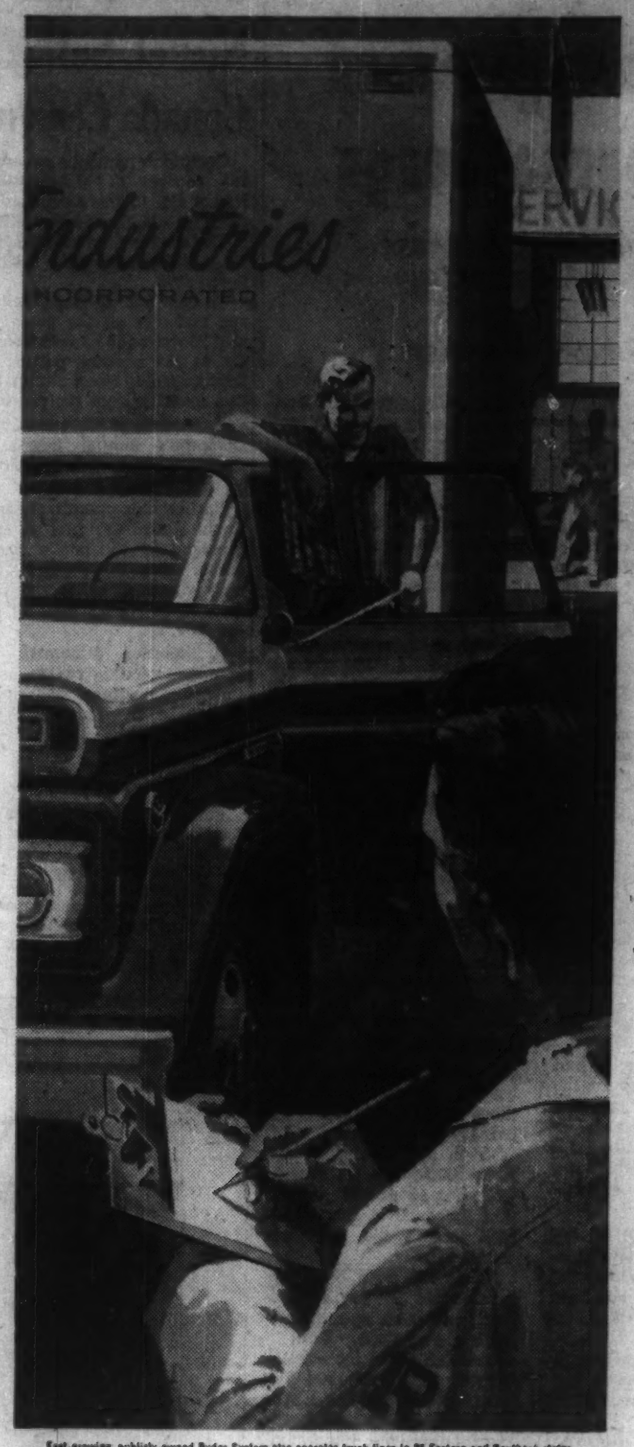
"However," Dr. Spinks said, "there are various problems, such as off-color or undesirable flavor which may be produced and also the economic one of carrying out the process at reasonable cost."

Enrolment Rises At Saskatchewan

Enrolment for 1959-60 term totals 10,703 at University of Saskatchewan, including the university's junior and affiliated colleges, nursing, agriculture and summer schools, and correspondence and evening courses.

The figure is up about 9% from a year ago.

Degree students this year at Saskatoon number 4,491, an increase of 377 from last year. On Regina campus, enrolment is 640, up from 596.



Fast-growing, publicly-owned Ryder System also operates truck lines in 25 Eastern and Southern states.

RYDER
buys, paints, insures, and maintains 'em... YOU just drive 'em and save!

Every day, more firms are finding it's more efficient and less expensive to lease their trucks from Ryder.

These immediate benefits alone make leasing worthwhile: (1) You don't tie up working capital. (2) Executive talent is free to perform productive functions. (3) Ryder gives top maintenance, helps you minimize delivery interruptions; extra trucks are always available for peak periods. (4) You can budget transportation costs in advance—and practically to the penny.

Trucks designed for *your* specific needs, painted to *your* specifications, and with maintenance guaranteed, are ready to roll *now*. You furnish the drivers, Ryder does the rest. Call any Ryder office (more than 100 throughout the U.S. and Canada).

Write today for free brochure on truck leasing, "Design for Profit."

What the Man Said:

Your good deeds go unnoticed because you are afraid to tell people about them . . .

RAYMOND VARELA, public relations counsel, writer and editor of a company magazine for Automatic Electric (Canada) Ltd. at Brockville, Ont., speaking to a meeting of Rotary International:

Private enterprise has given this country — and rest of the world — the highest standard of living in man's 40,000-year history.

Businessmen and managements have donated scholarships, built hospitals and schools, created foundations for the betterment of mankind and created jobs for untold millions.

Your good deeds go largely unnoticed because you are afraid to go out and tell people about them.

You allow the opposition to get away with distortion, half-truth and lies, and only in rare cases do you attempt to challenge their arguments.

Your reluctance to tell your story, your retreat from political action have led to a feeling among the general public that businessmen and executives live in a very special world of their own — divorced from reality, unless it's the reality of the production line and merchandising techniques.

You loath controversy, because controversy means you have to put yourself on one side or the other — supposedly bad for business.

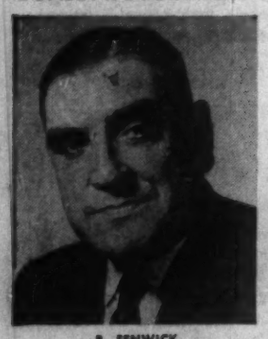
But your customers and employees know you cannot be on both sides of the fence at the same time.

You should never miss an opportunity to sell capitalism and private enterprise, to talk it up. And you should take a courageous stand on public and political issues.

Let the opposition know where you stand, and why.

ANNOUNCEMENT

DUNLOP APPOINTMENT



R. FENWICK

The appointment of Mr. Robert Fenwick as Sales Manager, Aviation Division, of Dunlop Canada Limited is announced by Mr. G. P. Plummer, Vice-President and General Manager.

Mr. Fenwick was born and educated in Scotland, and served in World War II with the R.A.F. in England and the Far East, and while commanding No. 69 M.U. was associated with No. 6 Group, R.C.A.F.

In 1951, Mr. Fenwick came to Ottawa in the capacity of Business Consultant. He joined Dunlop Canada Limited in 1954, and prior to his appointment as Sales Manager, Aviation Division, was responsible for the development of rubber tank linings for mining and industry.

Sales Tax Method Working Against Native Industry?

Canadian makers of confectionery products face a tax disadvantage in their battle with imported products for the domestic market.

It amounts to $2 million extra a year in sales tax because of the method of applying the 11% federal tax, according to Confectionery Association of Canada.

Imports of confectionery products are taxed on landed value only, S. J. Smith, association president, charges in a brief to Revenue Minister George Nowlan.

But domestic manufacturers must pay same tax on a larger amount — sales, distribution and administrative expenses must be included in the taxable amount, he says.

The result, according to the association: $2 million extra every year to the domestic industry.

Opportunities for You In Overseas Markets?

Looking for a foreign manufacturer to make your products under license for sale in overseas markets?

Names and addresses of foreign firms listed here will be supplied to interested Canadian firms by the Department of Trade and Commerce, Ottawa.

Here's the list of enquiries:

Cosmetic Products

A Swedish toothpaste manufacturer is seeking an arrangement with a Canadian company to produce dental, skin creams, and other cosmetic products in Sweden under license. This is a small firm employing a chief engineer and up to 10 employees.

They have packaging and manufacturing facilities available for cosmetic products. The firm is prepared to finance any changes necessary to initiate production of new items. File: 5-56-77.

Fishing Nets

A French manufacturer, wholesaler and retailer of fishing nets, seeks a licensing arrangement with a Canadian firm for the manufacture of related Canadian lines in France. File: 5-56-71.

Fish Freezing

A Pakistani company, engaged in the quick freezing and cold storage of shrimps, prawns, fish and other sea food, is constructing its own plant, with the following facilities: 5 tons — 24 hours quick freezing, 10 to 15 tons plate freezing, 200 tons cold storage capacity and 8 tons—24 hours ice plant.

They also intend to export dry fish, treated and dried in a scientific and hygienic manner. The company is seeking a joint venture with a Canadian firm willing to provide technical information and assistance in the procurement of auxiliary machinery and parts and also to engage the services of fishing trawlers. File: 5-56-82.

Rubber Products

An old established Dutch manufacturer and exporter of transmission and conveyor belts, V-belts, fire hose, rubber doors and other rubber products would like to expand and diversify present production activities to include the manufacture of related noncompetitive Canadian lines.

The firm seeks Canadian technical know-how and processes under a royalty licensing arrangement, profit sharing plan, and/or some other mutually satisfactory arrangement.

The company has a newly modernized plant which includes the following facilities: rubber bale cutting machine, rubber mixer, kneading roller, rolling calenders, spouting machines, drying machines, autoclaves, and a number of hydraulic presses for V-belts of various dimensions.

An adjoining site of about 1¼ acres is said to be available for further expansion of the plant. File: 5-56-86.

Further information can be obtained by writing B. R. Hayden, Industrial Development Branch Department of Trade and Commerce, Ottawa. File number should be quoted.

Manufacture Valves

A Luxemburg manufacturer of precision valves for liquefied, compressed and dissolved gases is interested in manufacturing under license special types of valves for gas containers or similar articles.

The company is particularly interested in dealing with a Canadian firm which is already selling to one of the countries in the European Common Market.

They have the required space and equipment for the manufacture of valves and similar components of brass or steel. They are exporters to Belgium, Holland, Switzerland, Germany, Norway, Sweden and Great Britain. File: 5-56-87.

Heavy Equipment

Negotiations with a Canadian firm are sought by a British equipment manufacturer desiring to produce Canadian equipment under license in the United Kingdom. The company has in mind standard lines of machinery and equipment used in mining and quarrying, agriculture, and the building and construction industries.

They are experienced in the production of quarry, sand and ballast plants; conveyors; screens; aircraft jacking and parking equipment; heavy duty loaders; equipment for use in rubber hose production; truck wheel washing machines and machines used in the upholstery trade.

Facilities available at present include centre lathes, turret lathes, milling machines, radial and pillar drills, and cutting and welding equipment. The company has sufficient capital to undertake expansion of the present plant to meet additional production. File: 5-56-88.

Mechanical Equipment

A Western European company with three plants in Switzerland, two in Spain and one in England, Holland and France has a history of 50 years' experience in creative design, precision mechanical work, and in mass or semi-mass production.

They are interested in the possibilities of manufacturing Canadian precision machinery, either under a licensing arrangement or as a prime or subcontractor. File: 5-56-89.

Copper, Lead Products

A Pakistani company is seeking Canadian participation in a proposed plant to manufacture copper and lead sheets, rods, ingots and other finished and semi-finished copper and lead products. The company states that manufacturing facilities can be obtained as and when necessary. It is also stated that copper and lead products, and particularly copper wire, are very heavily in demand in the country at present. File: 5-56-90.

THE FLEET BUY OF THE YEAR!

Rambler 1960

WITH THE TRUE BALANCE OF VALUES

Everything you ever wanted in a fleet car, you'll find in the 1960 Rambler. This is the car that combines the features you need in a fleet car into a true balance of values. Rambler 1960 is the result of 10 years of experience in Compact Car manufacture. Check its true balance of values. See why Rambler is your best fleet buy — by far!

For complete information on the Compact Rambler, write Fleet Sales Division, American Motors (Canada) Ltd., 2951 Danforth Ave., Toronto 13 . . . *or see your nearest Rambler dealer.*

- ☐ Excellent gas economy
- ☐ Low maintenance costs
- ☐ High Trade-in Value
- ☐ Top performance
- ☐ Excellent dependability
- ☐ Unit Construction durability
- ☐ Handling and parking ease
- ☐ Sleek, new styling
- ☐ Full, six-passenger room
- ☐ Top comfort, front and back
- ☐ Low Loading Trunk
- ☐ Corporate Prestige!

The New Standard of Basic Excellence

Montreal Bank Staff Changes

G. R. WIGLE, accountant, Hespeler, Ont., to be manager, Riverside, Ont.

A. G. J. HEBERT, staff department, head office, Montreal, to be manager, staff department, Quebec and Montreal districts, head office, Montreal.

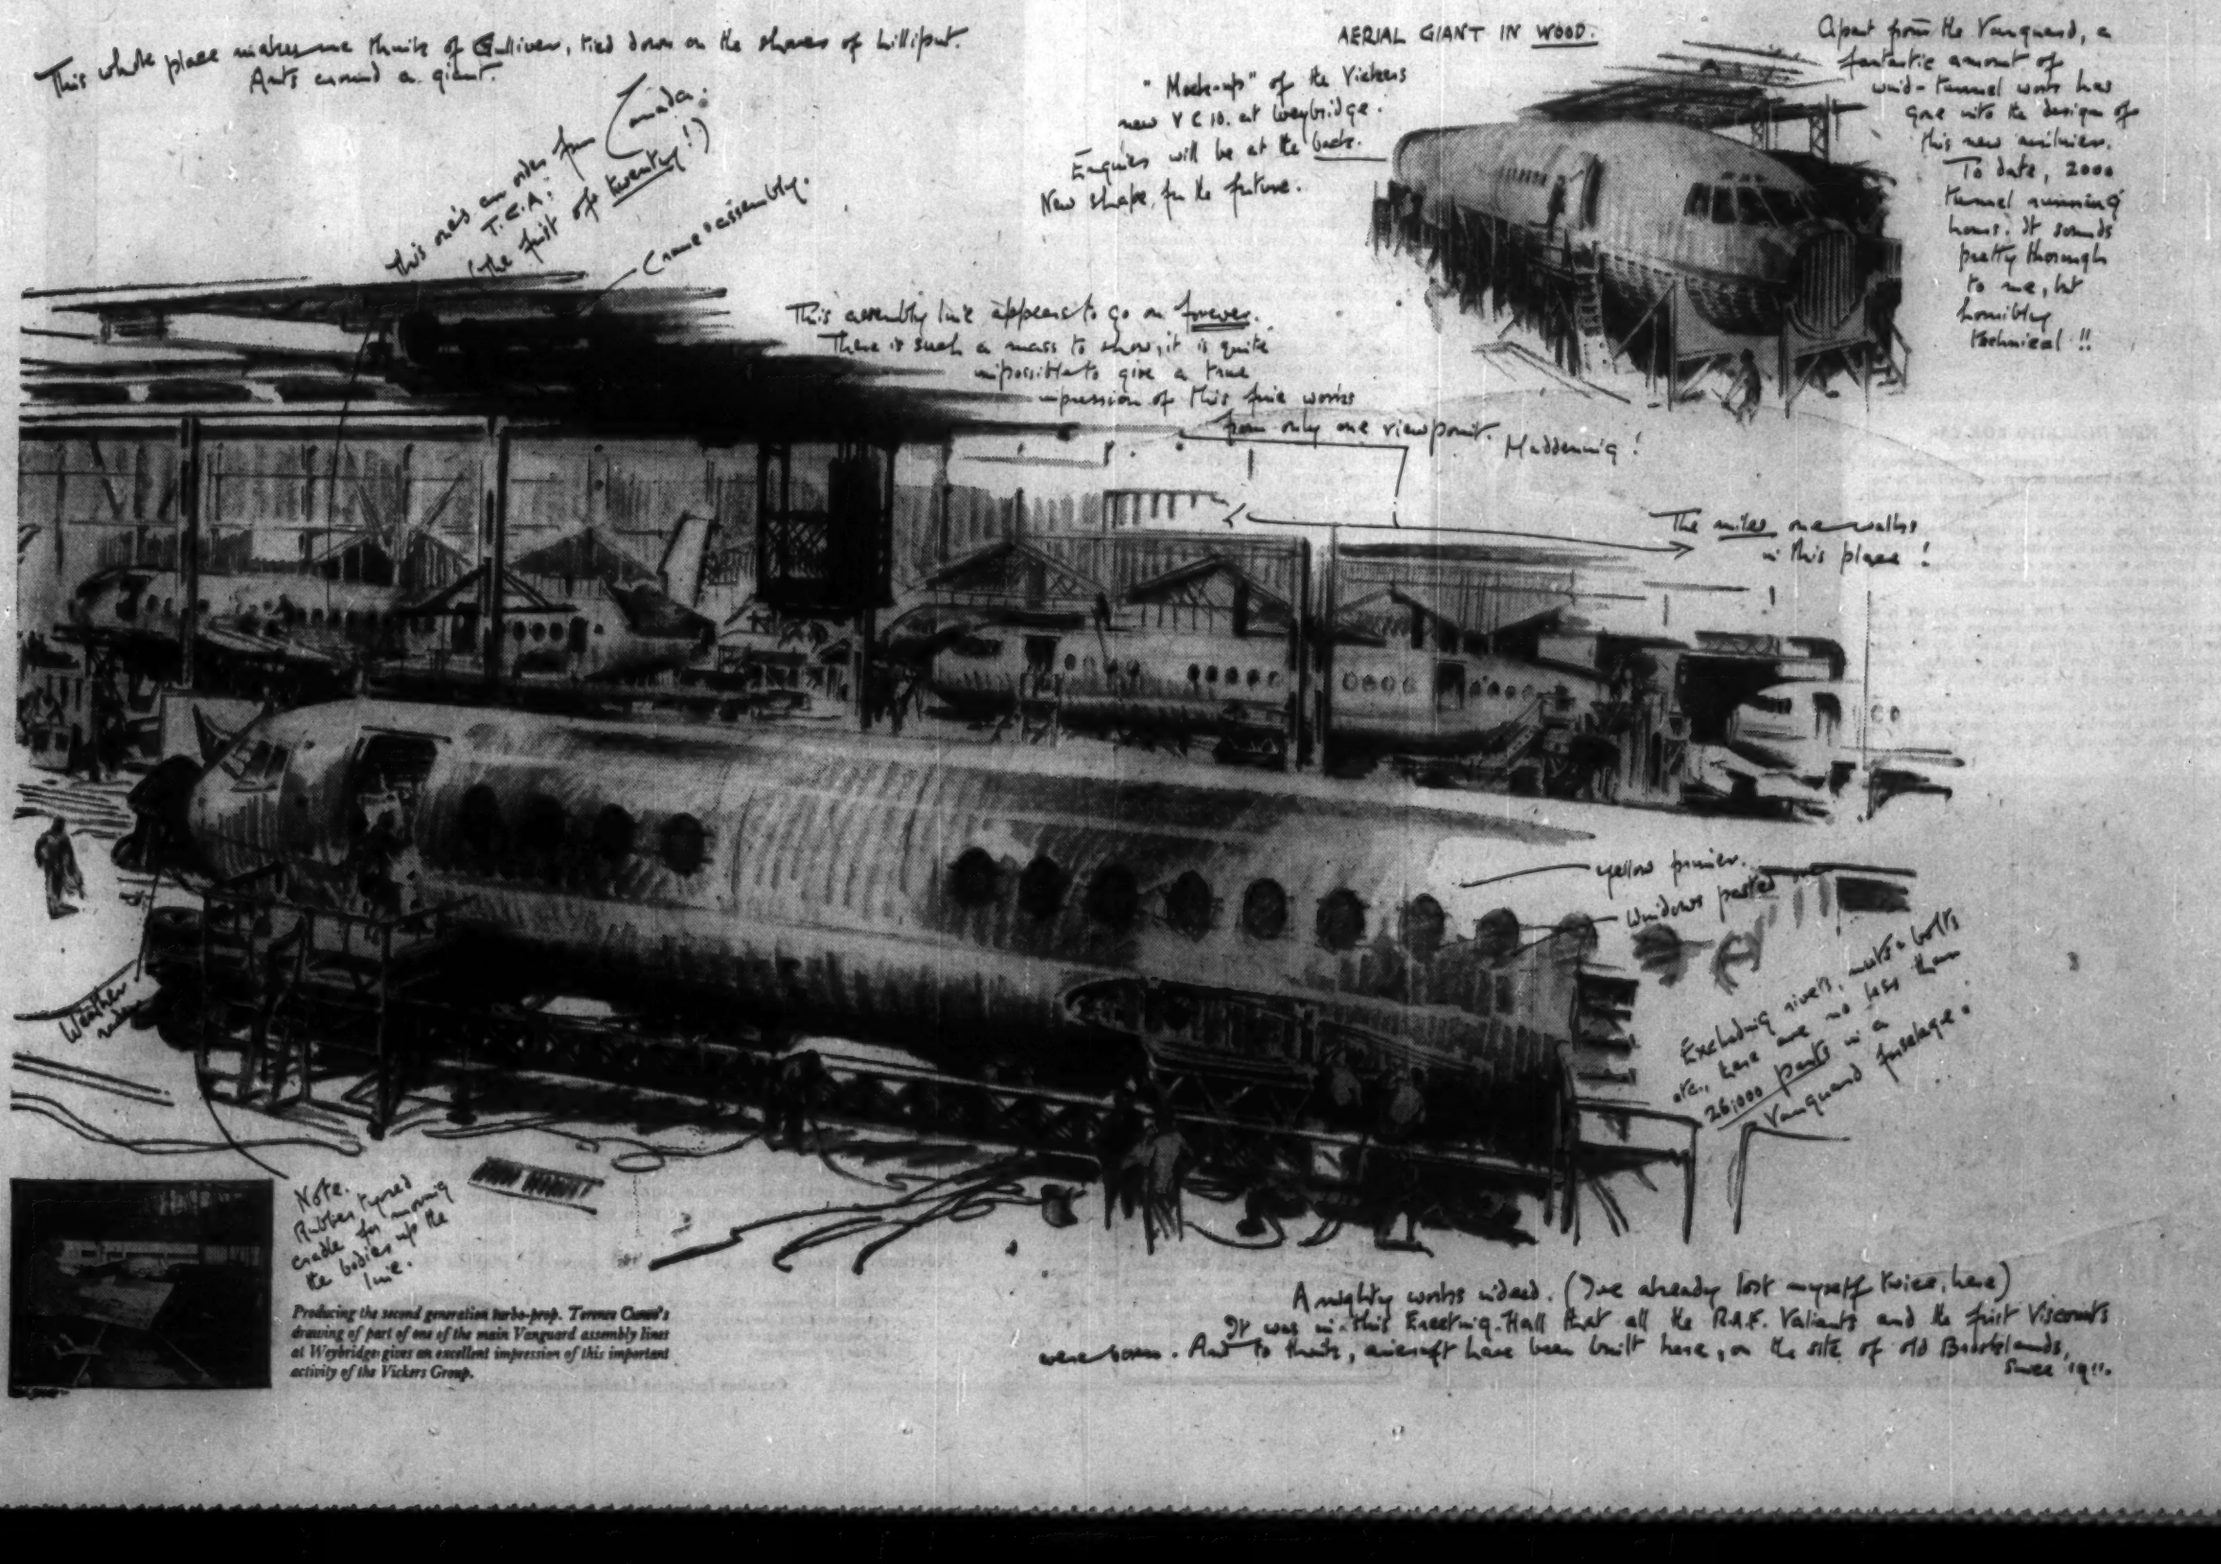
H. E. BUCK, staff department, head office, Montreal, to be assistant manager, staff department, Quebec and Montreal districts, head office, Montreal.

F. C. G. SHEWARD, an assistant manager, securities department, head office, Montreal, to be assistant superintendent, securities department, head office, Montreal.

A. TAYLOR, Winnipeg branch, to be manager, Kirkfield Park, Man.

G. B. HILTON, accountant, Estevan, Sask., to be manager, Fox Valley, Sask.

J. E. C. D. CHABOT, routine reorganization officer, head office, Montreal, to be manager, St. Eustache-sur-le-Lac, Que.



Producing the second generation turbo-prop. Terence Cuneo's drawing of part of one of the main Vanguard assembly lines at Weybridge gives an excellent impression of this important activity of the Vickers Group.

Hint Eastern Utilities Soon to be Broken Up

MONTREAL (Staff) — A once-extensive, Maritime-based utility holding company—**Eastern Utilities Co.**—may be broken up before long.

Rumors circulating in Nova Scotia and New Brunswick this week indicate that **Canada Electric Co.**, a wholly owned subsidiary of Eastern, may soon be up for sale.

Canada Electric, which has a 40,000-hp generating plant at Maccan, N.S., distributes power in northwestern Nova Scotia and supplies power to sections of southeastern New Brunswick.

Nova Scotia Light & Power Co. has already expressed interest in acquiring Canada Electric. There are reports that the Nova Scotia Power Commission may be interested too.

During the past year, scope of Eastern Utilities operations has been reduced substantially.

Moncton Electricity & Gas Co., a wholly owned subsidiary which formerly distributed electricity in Moncton, was expropriated by the New Brunswick Power Commission a year ago.

A second subsidiary, **Eastern Electric & Development Co.**, which formerly distributed in the Sackville area of southeastern New Brunswick, was taken over by Commission this year.

This has deprived Eastern Utilities of all power distribution operations in New Brunswick.

In addition to Canada Electric, remaining subsidiaries of Eastern Utilities are **Joggins Coal Co.** and **Maritime Coal, Railway & Power Co.** Both companies still operate.

The former mines coal to supply the Maccan generating plant while the latter transports the coal from the mine to Maccan.

President N. T. Avard of Canada Electric declined to comment on rumors the company might be offered for sale. He confirmed, however, that a valuation of company's property was being made.

Nova Scotia Light & Power, FP understands, has already communicated to the executors of the F. B. McCurdy estate its wish to bid for Canada Electric. The estate holds controlling interest in Eastern Utilities; it is reported.

N. S. Light tried to obtain Canada Electric many years ago, but at that time was outbid by the McCurdy interests.

In 1958, Canada Electric had a net profit of $151,788 ($118,982 in 1957).

At Dec. 31, total assets were valued at $7.7 million (before depreciation). For rate-making purposes, valuation is set at $3.4 million, FP understands.

Short Position Down on TSE

Short position on the Toronto Stock Exchange declined to 1,440,585 shares of 204 isues on Nov. 13, compared with 1,456,873 shares of 199 issues on Oct. 30.

Among the changes were:

Maritime Electric Co. Bids For Summerside Power Lines

Special Correspondence

CHARLOTTETOWN — **Maritime Electric Co.** is negotiating with the town of Summerside for purchase of rural lines now owned by the municipality.

Price: $187,542.

This is the figure quoted by Maritime Electric in outlining general terms on which an agreement of sale may be based.

Involved are all rural lines owned by the town with exception of the Dekker branch of St. Eleanors Road line.

Summerside has been concerned with unprofitable operations of rural lines for some time.

Maritime Electric has a 20,000-kw steam plant which supplies light and power to Charlottetown and about 25 other Prince Edward Island communities. Company plans to increase capacity 50% by 1961.

Summerside electric plant has seven diesel units with a total output of 2,835 kw. The municipality purchases some 6.5 million kwh annually from Maritime Electric.

Retail Fight For Quebec?

Watch for a hotter retail fight in historic Quebec City.

It's a substantial market — over 300,000 in metropolitan area — which a number of chains have their eyes on:

- **T. Eaton Co.** this week announced it would open a heavy goods store — its first in the Quebec capital.
- Trade rumors are that **Simpson's** or **Simpsons-Sears** is looking hard at this market for possible expansion.

A Simpson's official says only that it is "one of many spots under continuous study".

Simpsons-Sears already has a "class 1" mail-order outlet there, with floor stocks of appliances and similar goods.

The Eaton's store will carry household appliances, furniture, furnishings, radio and television sets.

There has been an Eaton's order office in Quebec City since 1941.

It will now be located in the new store slated to open Friday at 277 St. Joseph Street.

Roger Robillard of the company's Quebec division will be store manager.

LYNX PLANS

Lynx Yellowknife Gold Mines plans further geophysical surveys and drilling on its Mattagami area base metal prospect. The new work, a follow-up program to recently completed drilling, is expected to start early next year.

YOU CAN COUNT ON WOLVERINE TUBE

• • • PRODUCT RELIABILITY

Dependability is one of the inherent qualities built into Wolverine commercial copper and brass tube and condenser tube. It is the result of Tubemanship—a program of quality control, research, development as well as pride of skilled workers. Wolverine Tube manufactures and markets seamless copper and copper alloy tube in a wide range of types and sizes—entirely from raw materials produced in Canada.

• • • SERVICE RELIABILITY

And you can depend upon Wolverine Tube for service, too. A staff of trained tube technicians—known as the Field Engineering Service—will help you unsnarl tough engineering problems dealing with corrosion, fabrication and design. For complete information write for your copy of the Wolverine General Products Catalogue. Dept. AA-11.

DON'T FORGET — WOLVERINE COPPER AND COPPER ALLOY TUBING IS MADE THE TUBEMANSHIP WAY

Loans for capital expansion

Many industrial enterprises with good prospects but in need of finances will be started or expanded this year in a way that provides a sound basis for development through the financial assistance of the Industrial Development Bank.

Information about I.D.B. financing in the fields of:

• Manufacturing • Repairing • Processing
• Transportation • Construction • Air Services
• Packaging • Engineering etc.

can be obtained from your banker, auditor or lawyer or from the nearest office of the Industrial Development Bank listed below:

idb INDUSTRIAL DEVELOPMENT BANK

Established in 1944 by the Government of Canada to help in financing new or expanding small and medium sized enterprises.

Toronto Building Opens This Week

Monarch Mortgage & Investments Ltd., Toronto, officially opened its new $2 million, nine-story Monarch Building at 42-48 Charles St. E., Toronto, this week.

Designed by **Marani, Morris & Allen**, engineering firm **Nicholas Fodor & Associates** handled mechanical work and **Reicher, Bradstock & Associates** structural steel work.

Taylor - Woodrow (Canada) Ltd., of the Taylor-Woodrow group of building and civil engineering firms, carried out construction.

Parking facilities have been provided for 32 cars above ground and 24 under ground.

MACASSA OUTPUT

Macassa Mines turned out gold bullion worth $232,600 in the month of October. A total of 12,743 tons of ore were milled during the month, with recovery averaging $18.25 per ton.

Truckers Help Students Pay College Fees

"Christmas in October" — the program by which Ontario trucking companies contribute as educational bursaries the amounts they otherwise would spend on Christmas gifts—reached its goal of $35,000 with 41 members, in its first year.

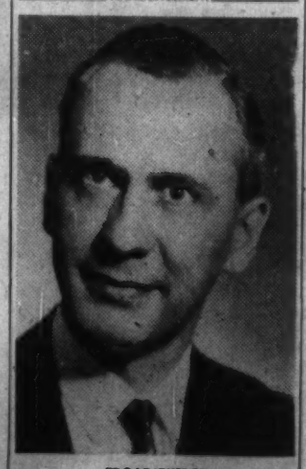
That was reported to the Automotive Transport Association's annual convention in Toronto this week.

Goal for 1960: $50,000. Students are assisted throughout their university course if they need aid, and there is no restriction on courses taken.

The Trucking Association of Quebec also is developing an educational foundation, the convention was told.

About 30,000 special Christmas cards will be distributed by Ontario participants this year.

ANNOUNCEMENT



EDGAR PINDER

Appointment of Edgar Pinder as the Canadian Chamber's Assistant Ontario Manager in the field of membership relations is announced by General Manager D. L. Morrell. Mr. Pinder, who joined the staff of The Canadian Chamber of Commerce in 1957, was formerly Ontario representative. He will continue to make his headquarters in the Canadian Chamber's Ontario office located in Toronto. Mr. Pinder has a wide background of experience in various business fields.

WHEN WEIGHED IN THE BALANCE

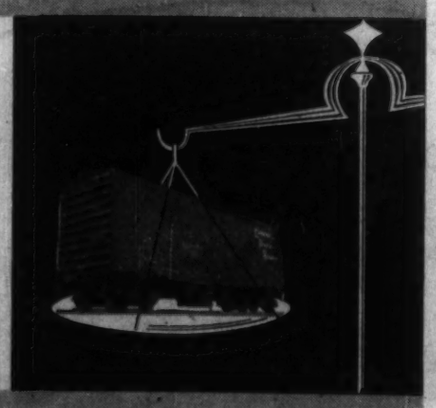
the scales are tipped in favor of rolling stock built by NATIONAL STEEL CAR.

NEW INSULATED BOX-CAR

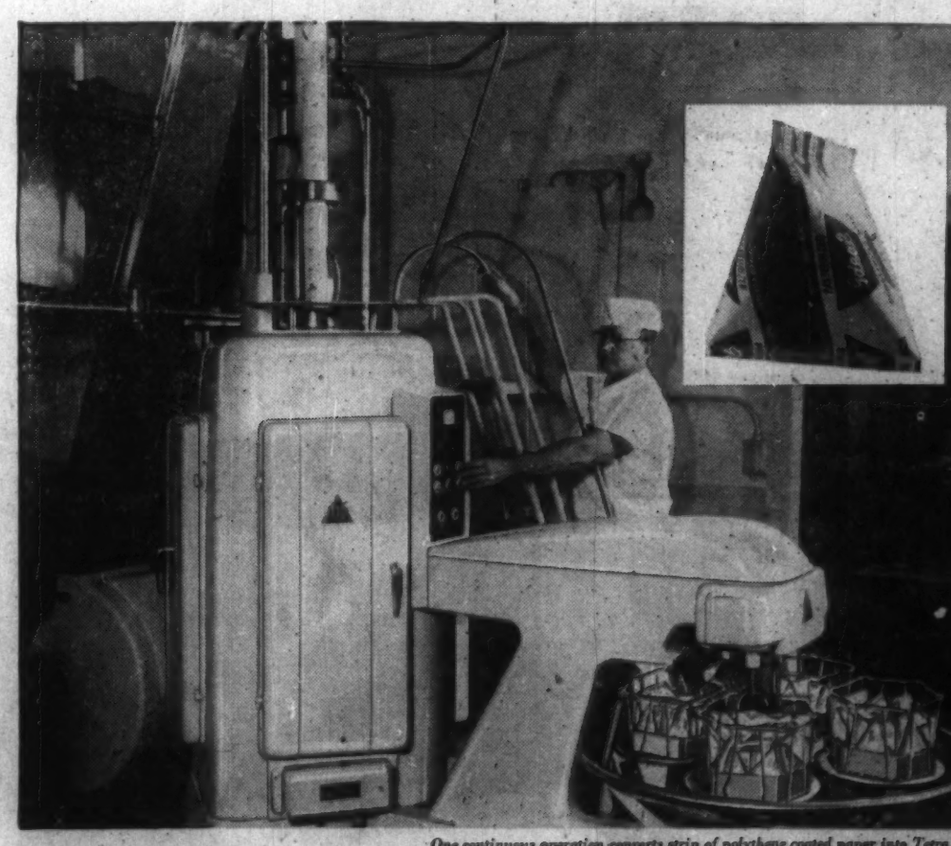
Another innovation in Canadian Pacific Railway's freight service equipment and first of its kind to be used in Canada, is this specially-designed insulated box-car which has a dual task. Primarily built to supplement the company's refrigerator car fleet during peak seasons in the movement of traffic requiring heat, this new-type car can also transport clean bulk grain or manufactured commodities.

Another feature of the insulated box-car is a plug-type door. Inside measurements are 40 feet long; width 8' 9"; carrying capacity of 57 tons; capacity of 3,377 cubic feet. Two underslung charcoal heaters provide the car with ample heat.

500 of these cars, illustration of one of which is shown below, have been ordered from National Steel Car by the Canadian Pacific Railway Company.



NATIONAL STEEL CAR Builders of reliable rail transport
CORPORATION LIMITED
HEAD OFFICE: HAMILTON, ONT. SALES OFFICE: MONTREAL, QUE.



One continuous operation converts strip of polythene coated paper into Tetra Paks

Polythene makes it possible:

a new "pyramid" carton that can cut fluid milk packaging costs in half

Tetra Pak is a new pyramid-shaped carton for milk and other liquids. It reduces liquid packaging costs because the carton is *formed, filled* and *sealed* in one continuous operation on one machine.

In the converting operation a continuous strip of printed, polythene-coated paper is formed into a tube with a heat-sealed seam. The tube is filled with liquid. Sealing jaws, working at right angles to one another, heat-seal the tube into a chain of liquid-filled tetrahedrons which are then cut into individual Tetra Paks.

Polythene is specified as the Tetra Pak paper-coating because it is heat-sealable, retains its flexibility at low temperatures, is impermeable to water, is odorless and tasteless. Polythene is the least-expensive coating available today that *combines* heat sealability and flexibility at low temperatures.

Polythene is found in many fields—as packaging and construction film, flexible pipe, wire and cable insulation, housewares and paper coating. It could mean improved performance, longer life or added sales value for *your* products. For additional information, write: Canadian Industries Limited, Plastics Division, P.O. Box 10, Montreal.

12,000 businessmen keep posted on developments in the plastics field by reading "Plastics Sphere". Write for your copy.

C-I-L Polythene

Canadian Industries Limited supplies polythene resin for paper coating.

HOME BUILDER JOE CAMARDA

Voici comment on économise à Montréal

Luxury dwellings constructed by Joe Camarda in Mount Royal and district will be very snug, very snug indeed when cold winds blow, Emco "Magic Heat" installations are Mr. Camarda's choice—"they combine highest efficiency and economy . . . the baseboard radiation is compact, gives balanced heat." True words, Mr. C.!

Emco Limited, London, Canada

URANIUM DELIVERIES

Deliveries of uranium oxide to the U. S. and U. K. atomic energy agencies by **Eldorado Mining & Refining** totaled 4,313 tons in the third quarter of 1959. Value of the oxide was $87,441,000, bringing total shipments for the nine month period to Sept. 30, to $237,101,000, ahead from $192,909,000 in the same period last year.

ANNOUNCEMENT

HEWITT EQUIPMENT APPOINTMENTS

W. J. CARSON

G. B. MILLS

In keeping with present and future expansion plans of the Company, Mr. Robert Hewitt, President of this Quebec Caterpillar Dealership, announces the promotion of Mr. William J. (Bill) Carson to the newly created senior position of Executive Assistant and also the promotion of Mr. Gordon B. Mills to that of General Sales Manager.

Messrs. Carson and Mills were formerly General Sales Manager and Sales Manager, respectively. These appointments are to be effective immediately.

Messrs. Carson and Mills, each with many years experience in the Heavy Earthmoving Equipment Field, have been with Hewitt Equipment Limited since its founding in 1952 and have played an immeasurable part in its rapid growth.

H. P. SKOGLUND, *President*

Skog says...

"New home designs forget one thing!"

Can you imagine how amazed great grandma would be if she could walk through one of today's modern homes? Imagine her seeing a range built into the wall that cooks meals automatically . . . a refrigerator that dispenses juice and ice cubes at the flick of a lever . . . the one-step laundry . . . air conditioning . . . electrical gadgets! Yes, today's homes are really wonderful.

And the home of tomorrow will be more wonderful still. We'll have walls that are actually lights, heating units operated by the heat of the sun, electronic vacuum cleaners, TV sets the size and shape of a picture frame.

The designers are only forgetting one thing: an automatic bill payer! That job will still be left to people like you and me. But there is a way, even today, to meet home payments in case of financial emergency. We call it our Home Protector Plan.

It protects your home against mortgage foreclosure in two ways. One—the NALAC Home Protector Plan will pay off the mortgage if you don't live to do it yourself. Two—the plan will take care of your mortgage payments for you if you're disabled by sickness or accident. Your NALAC representative will be glad to tell you more about it.

Company Reports

Distillers

H. CORBY DISTILLERY LTD., Montreal, consolidated net profit of $1,700,554 for year ended Aug. 31, 1959 was 6.5% lower than previous year's $1,819,719.

Net earnings from operations in Scotland amounted to $190,447 compared with $215,824 in the previous year. President G. R. Herington reports. Profits are exclusive of foreign exchange adjustments arising in consolidation.

In April, 1959, an increase of $1 per proof gallon in federal excise duties and a 1% increase in federal sales tax went into effect. President Herington points out that as the sales tax "is applied to the duty-paid values . . . it is in part a tax on a tax".

HIRAM WALKER-GOODERHAM & WORTS LTD., Walkerville Ont., consolidated net profit of $23,694,387 for year ended Aug. 31, 1959 was 8.5% higher than previous year's $21,845,494.

Sales reached a record high as a result of increased consumer demand.

At Walkerville, expansion included construction of a three part unit for receiving empty packages, bottling for the market and shipping. It is scheduled for completion in 1960. Also under way is an additional plant for manufacturing by-products feeds. Near Walkerville, the company has purchased two buildings for warehousing.

A new 115,600 bbl. rack warehouse is due for completion in mid 1960.

In Scotland, less rapid extensions of inventory and warehouses will be needed in future. Earnings of this subsidiary are being used to pay off the indebtedness incurred in preparing for its sales growth.

"Significant and welcome" changes have been made in U. S. in excise tax collections, President Howard R. Walton states. Tax is no longer applied on machine leakage.

During the 1959 fiscal year, options for 27,000 shares were granted and options for 16,860 were exercised.

Food

CATELLI FOOD PRODUCTS, Montreal, consolidated net profit for the three months ended Aug. 31, 1959 amounted to $61,910. For the year ended May 31, 1959, consolidated net profit was $766,139.

Company's fiscal year end has been changed to coincide with that of **Ogilvie Flour Mills Co.,** which now holds 98.5% of Catelli's class B shares.

Sales during the three month period reported are at a low point for the year. President Paul Bienvenu points out that profit should not be "construed as indicative of what it should be during a 12-month period."

In the year ended May 31, 1959, capital expenditures amounted to $670,000. Greatest part was used to increase capacity at Montreal, St. Thomas and Lethbridge plants.

Sales of dry macaroni exceeded the total sales of all competitors.

Continued increases are being made in sales of Habitant soups.

More emphasis is being placed on research. Company expects to offer two new products this year.

New issue of $1,120,000 5¾% serial debentures, due 1965-69 were sold at mid-year. Proceeds are providing for additional manufacturing facilities in Ontario and Western Canada.

ANNOUNCEMENT

ALEXANDER CLARK

Mr. A. H. Douglas, Q.C., Chairman of the Board of The Calgary & Edmonton Corporation Limited, takes pleasure in announcing the appointment of Mr. Alexander Clark of Calgary, Alberta, to the office of President of the Corporation.

Born in Great Falls, Montana, Mr. Clark holds a Bachelor of Arts degree in mathematics and physics from Whittier College, California, and Bachelor of Science and Master of Science degrees in geology from the California Institute of Technology. Prior to and during his studies at Whittier College, Mr. Clark was engaged in various phases of oilfield work in the United States, and in 1929 he joined Shell Oil Company in California as a Paleontologist and Stratigrapher. During his twenty-two years of service with Shell Oil Company, Mr. Clark held numerous positions in that Company's Exploration Division including, during the years 1941 to 1943, the position of Exploration Manager for Western Canada. Mr. Clark left Shell Oil Company at the beginning of 1952 and was appointed Vice-President and Director of Federated Petroleum Ltd. In 1953 he joined Home Oil Company Limited and was appointed to his present position of Vice-President and Director of that Company. He will relinquish these positions at the end of this year, and will assume his duties with The Calgary & Edmonton Corporation Limited at its Head Office, Calgary, Alberta, on January 1, 1960.

Mr. Clark is a member of the American Association of Petroleum Geologists, the Alberta Society of Petroleum Geologists, and a Fellow of the Geological Society of America.

Scurry Farms Out NWT Test Well

Scurry Rainbow Oil has reduced its stake in the test well which will be drilled north of the Arctic circle, the well, only 180 mi. south of the Arctic Ocean, is the northernmost hole yet spotted in Canada.

Through a farmout arrangement with **Richfield Oil Corp.,** Scurry has picked up a cash bonus, recovered all its expenses on the location to date, and has a 3% overriding royalty. Richfield is committed to completion of the test well to a minimum of 6,000 ft.

Drilling is expected to start by the end of this year.

During the nine months ended Sept. 30, Scurry reports gross income from operations of $941,632, ahead $50,676 from the same period last year.

Crude oil production averaged 2,400 bbl. a day for the nine months, an increase of 6% over the same period last year.

Royalty income has also continued to climb and now represents 35% of the company's total daily production.

Company now has royalty interest in 450 producing wells. At June 30, Scurry held interests in 625 oil wells and 42 gas wells in western Canada.

NEW TORONTO BRANCH

Editorial Associates Ltd., one of Canada's oldest public relations firms, is opening a Toronto branch office to be managed by Harold Hilliard, former Toronto newspaperman. In addition, the firm has named John Gossip manager of the firm's branch in the Queen Elizabeth Hotel in Montreal and Madame Marie-Masson Barthe director of French language services.

You don't need a detective to solve that car problem!

JUST **GO TILDEN!**

If your own car is laid up — or perhaps a bit on the shabby side and not quite dependable — *take that business trip or vacation in a shiny new car as private as your own!* All you need is your driver's license and identification to GO *TILDEN!* It's less expensive than you think.

Market Comment

What stocks and bonds are doing and what prominent observers say

Feature of Canadian markets in recent days has been the improvement in certain key export stock groups, like nickel, pulp and paper. This has reflected higher sales and a decline in the premium on Canadian funds. There are strong indications that the premium on the Canadian dollar could move lower still over the next couple of months.

Canadian brokerage house business continues at very reduced levels as cautious investors refuse to budge from sideline positions. It may well take the re-entry of the foreign buyer into our basically commodity-type market to bring the necessary change. Some top market authorities look for just such a development early in the New Year.

* * *

RICHARD REDLER; Gairdner & Co. (Toronto)

In the U. S., final settlement of the steel strike should usher in a period of hectic inventory building. In Europe, everyone of the O.E.E.C. countries is beating all-time production records. Europeans envisage for the first time a mass production market supported by modern consumer credit. A capital investment boom results from the effort of industries to establish new strategic plants in a Common Market.

The demands of economic expansion on both continents will melt before long the surpluses of industrial raw materials that looked so formidable a short time ago.

The resurgence of Canada's traditional exports of natural resources should prove the decisive factor of our stock market in 1960.

The pulp and papers and base metals, notably nickel and copper, should be the first beneficiaries of unparalleled world prosperity. Their earnings — as well as those of other exporters whose gains may be delayed and less spectacular — may also benefit from an abatement of the Canadian dollar premium.

During the past three to four years the investor has fared better in the U. S. than in the Canadian stock market. Whereas the Dow Jones industrials today are up 24% from mid-1956, the TSE industrials show a gain of less than 2%.

I believe that we will see the foreign investor back in our equity markets again, and I would expect the Canadian stock markets to beat in 1960 by a fair margin the advances scored on the New York Stock Exchange. Already, the TSE industrials have pulled away by about 5% and the MSE papers by 10% from recent September lows, while the Dow Jones industrials advanced by less than 3% thus far.

* * *

P. B. REID; MacDougall & MacDougall (Montreal)

A more than normal number of economic and psychological cross currents tend to confuse the investment problem today and an increasing amount of caution seems to be evident. In the U. S. the defensive attitude of the investment trusts along with the unsatisfactory and inconclusive negotiations in the steel strike have perhaps been the leading factors in damping down optimism.

Canadian industrial stock averages have been lagging behind New York for most of the current recovery move and gains of around 7% made earlier in the year have been lost, so it may be that at the present level much of the probable grief has been discounted. However, we are very much in accord with a recently noted comment that super-selectivity is required and with this qualification we believe that there are good buys in this market.

Surplus productive capacity in oil and base metals have driven the prices of many stocks in these groups back to levels of four or five years ago, despite the U. S. recovery and a high level of business activity in Europe. At these levels it would seem preferable to hold for some improvement, while taking advantage of any opportunities to switch into stronger situations where definite evidence of progress is being shown.

Our markets may be expected to look to New York for leadership as long as our economy is as closely related to that of the U. S. But there may be some significant divergencies, such as in the action of stocks that would be affected by a decline in premium on the Canadian dollar.

Newsprint and nickel equities have firmed apparently in response to mild U. S. dollar strength and with steadily improving sales, the outlook for these shares is encouraging. Canadian steels have had an excellent year and with high capital expenditures projected should do well next year. Iron ore companies, assuming the U. S. steel mills are closed for a lengthy period, could achieve new record shipments.

After a long delay, the natural gas industry is expected to get government approvals for export to the U. S. and if domestic sales make the headway that seems possible there should be a revival of interest in some of the issues that have fallen into disfavor although, under the best of circumstances, dividends for the big pipelines and new distributing companies cannot be expected for several years.

The formerly popular groceterias are now suffering the reaction compounded by the cost of the trading stamp mania and the end of the profit decline is not in sight, although the stock prices have levelled off and would probably be in a buying range if the trading stamps were outlawed.

Banks and electric utilities, also well below previous highs, have merit for conservative appreciation.

* * *

ANNETT & CO (Toronto)

The Canada Savings bond issue has proven an exceptional success, net sales amounting to something over $600 million. This means that when the $300 million 3's of December 15, 1959 have been refunded the government will very likely have sufficient cash to carry it until the end of the fiscal year.

The big question is the type of refunding issue that will be offered. With the recent experience of several successful provincial, municipal and corporate offerings, it could be that the government will test the market with a long term bond as part of a December offering. This could cause a downward adjustment in the prices of outstanding long issues and at the same time contribute some strength to the shorter end of the market.

The stock markets here and in New York are still predominantly affected by doubts as to whether a solution of the steel situation will be reached during the "cooling out" period.

Meanwhile the combination of tighter money and the steel strike has levelled off the boom and the economy, especially with inventories depleted, would seem to be in a healthy position to carry through 1960.

There has been no inclination on the part of investors to sell good securities, in fact sound equities seem to be regarded by North Americans as certain European countries regard gold — something to be hoarded.

Tax selling has been well absorbed and in view of the present satisfactory internal condition of the market the usual year end rally seems likely.

Stocks such as the gas producers and gas pipelines should do better, as well as some over-sold sound investment situations.

ANNOUNCEMENT

THOMPSON PRODUCTS LTD. APPOINTMENT

D. R. THOM

Mr. R. S. Kenerson, president, Thompson Products Limited, St. Catharines, Ont., is pleased to announce the appointment of D. R. Thom as manager, Automotive-Mining division.

Mr. Thom has been manager of the Automotive division for six years and was sales manager with the division some years prior to that. The Automotive-Mining division of Thompson Products was formed late in October 1959 when the manufacturing facilities of three divisions were grouped under one management.

Thompson Products, well known in the Automotive, Aircraft, Mining and Electronic industries, is a major producer of forgings, castings, and machined components and assemblies.

Company Report

Containers

CONSUMERS GLASS CO., Montreal, net profit of $753,231 for year ended Aug. 31, 1959 was 11.6% lower than previous year's $851,901.

Sales for the year increased moderately. Reduced profits were the result of high production costs, starting up expenses of the new furnace and rearrangement of production at Montreal.

The new 100-ton furnace at the Etobicoke plant, which doubles capacity there, started operating in the middle of the fiscal year. Full benefits from the expansion can be expected in the future, President J. N. Jordan reports.

Capital expenditures amounted to $2,099,640.

Annual meeting is on Dec. 11.

INCOME ACCOUNT

Years Ended Aug. 31:	1959	1958
Net earnings	$1,075,762	$2,224,105
Less: Deprec.	505,031	405,527

ANNOUNCEMENT

APPOINTMENT ANNOUNCED

G. A. (GORDIE) DRILLON

Mr. George T. Urquhart, Vice-President, of Burma Propane Gas Company Limited, is pleased to announce the appointment of Gordie Drillon as Special Sales and Public Relations Representative.

Mr. Drillon assumes his new position immediately. He will be visiting all company branches and dealers in connection with the overall Maritime distribution to consumers of Burma Propane Gas."

Prices Boost Noranda Profit

Higher metal prices and lower operating costs combined to push nine months earnings of **Noranda Mines** ahead 18% this year.

The estimated net profit for the period to Sept. 30, 1959, was $7,969,000 or $1.78 a share, ahead from $6,763,000 or $1.51 a share in the same period last year.

Here are the financial results for the period as reported by Noranda:

	Nine months	
	1959	1958
Metal production	$25,161,000	$22,168,000
Investment income	3,955,000	3,715,000
Operating costs	10,710,000	11,631,000
Interest	1,278,000	1,461,000
Depreciation	4,794,000	2,983,000
Outside exploration	450,000	375,000
Taxes	3,915,000	2,670,000
Est. net profit	7,969,000	6,763,000
Earnings per share	$1.78	$1.51

CONCESSION RENEWED

The 142 sq. mi. iron ore concession of **Consolidated Fenimore Iron Mines** in the Ungava area to the west of Fort Chimo has been renewed by the Quebec government. The renewal follows a two-year wait by the company on its application.

Taking Stock

What's going on in the mining and oil markets — the facts and rumors.

BY FRANK KAPLAN

A dropping premium on Canadian currency is starting to show some moderate effect on selected mining issues.

Obvious favored group consists of gold producers which receive $35 (U. S.) oz. Golds have attracted a following for some time despite a rising premium and again strengthened as the premium fell to 4½% from about 6%.

However, the picture was mixed for other metals which go to world markets. Coppers tended easier as irregularity in world copper markets led to price cuts with the domestic Canadian level now 30c, compared with 31c set Nov. 6.

Here's how some golds and coppers have been trading.

	Latest Price	Mid Nov.	1959 High	1959 Low
Golds	$	$	$	$
Giant Yellowknife	9.85	9.60	9.90	6.25
Kerr Addison	20¾	19⅞	21½	18¼
Campbell Red Lake	12½	12½	12½	10
Dome Mines	19	18¾	21¼	15¾
Coppers				
Noranda	46⅜	46⅝	58	44¼
Geco Mines	16½	17¼	24½	17⅜
Opemiska	7.80	8.00	12¾	7
Campbell Chibougamau	6.05	6.50	10.50	5.70

* * *

International Nickel is a feature, influenced both by the lower premium and generally active business for nickel as steel industry in U. S. gets rolling. Inco shares at $98¾ are up $4¾ from $94 recently. On U. S markets, Nickel climbs to $103¼ from around $99½.

Consolidation of **McIntyre-Porcupine's** overwhelming controlling interests in **Belleterre Quebec** (a former gold mine) and **Castle-Trethewey** (a silver producer) sparks some interest. Belleterre at $2.31 is up from a recent $1.75 level with the company proposing to make a preliminary cash distribution of $2.50. Castle shares at $5.75 are ahead from $5.40 as M. L. Urquhart, president, calculates the McIntyre deal at the equivalent of $6.16 a share (including 15c Castle dividend). McIntyre, meanwhile, drops $1 from a recent $84.

* * *

New Mylamaque is hit by brisk selling as it drops to 83c from around $1.16. No particular change in the company's picture with efforts still being pushed at lining up buyers for its iron.

Another favorite of speculators, **Orchan,** sags to 73c from 93c. **Jacobus Mines** and **Glacier Explorers** come off the SEC restricted list (issues in which U. S. brokers may not trade) with Jacobus recovering from $1.23 to $1.30 and Glacier at 21c comparing with 26c.

Montgary Explorations is reorganizing with shareholders to get one share for every 2½ held. Stock has been firming recently, climbing to 65c from a 45c low then dropping back to 49c, with the company planning a small mill for its Manitoba lithium property.

* * *

ON THE OIL AND GAS FRONT—prices settle into a narrow path at the five-year lows touched recently by the Toronto Stock Exchange western oil index. The odd leader bucks the trend. **Royalite** at $6.10 compares with $5.75 recently after sliding from $6.80 early in the month.

Scurry-Rainbow fattens its cash picture with a farmout of its interest in 3.5 million acres in the Northwest Territories. **Richfield Oil** takes over the well which was originally scheduled by a group led by Scurry and including **Canadian Devonian.** Scurry shares are seldom traded. They have ranged between $12 and $6.50 this year. Canadian Devonian at $3.75 compares with $3.70 in mid-month.

More activity in the Simonette River area which officially becomes a producing region with more wells planned. This oil discovery sparked speculative interest in **Petrol** earlier this year. Petrol at $1 is down from about $1.10.

Cons. Mic Mac In Pembina

Gross revenue from production of **Consolidated Mic Mac Oils** climbed 21% during the first half of the company's fiscal year. . .

Revenue for the period to Aug. 31, 1959, was $276,827, ahead from $227,660 in the same period last year.

The increase reflects the acquisition of additional reserves. New oil wells in Pembina and potential gas areas in the foothills area of Alberta have been added.

In the north Berland River area of the foothills region, two wells are planned on a 19,520-acre block in which Mic Mac has a 22½% interest.

Farmout discussions are under way on a 34,880 block in the south Berland River area in which Mic Mac has a 30% interest.

Elsewhere in the foothills, a seismic survey is being completed on 24,960 acres in which Mic Mac has a 50% interest.

More production is scheduled for the Pembina area before the end of the year. Five wells were completed and placed in production in the northeast portion of the Pembina field and a step-out well has been completed just north of the field. A further nine wells are planned near the step-out.

MSE, CSE Seek Reports

MONTREAL (Staff) — The Montreal Stock Exchange and the Canadian Stock Exchange have mailed requests for quarterly earnings statements to industrial and producing mines and oil companies whose stocks are listed on their boards.

The letters, sent out late last week and early this week, are part of a program agreed to in October with the Toronto Stock Exchange, Montreal exchange officials say.

The TSE, which originated the idea, mailed its requests two weeks ago (FP, Nov. 21).

OSC Appoints Mining Engineer

Ontario Securities Commission has appointed Dr M. H. Frohberg as a mine engineering consultant.

The move is expected to avoid unnecessary delay for mining companies when they have submitted issues for filing.

In addition to spending two days a week on the job, Dr. Frohberg will be on call during investigations undertaken by the commission.

Worth Noting

Financing agreements and changes in financing, deals, major changes in capital, filing statements are listed as reported by the Toronto and Montreal exchanges, Ontario Securities Commission.

ACADIA URANIUM MINES, TSE filing statement in respect of change in control and board of directors.

HEAD OF THE LAKES IRON, TSE filing statement in respect of underwriting of 199,995 shares at 15c a share with options granted on further 800,000 shares at 15c to 20c a share over one-year period; option subject to increase in authorized capital to 5 million shares.

LAVANT MINES, release of 69,520 shares from escrow.

NORTHERN URANIUM MINES, release of all escrowed shares to facilitate winding up.

NORTHGATE EXPLORATION, option installment covering 100,000 shares at 60c a share not exercised and agreement terminated.

ROWAN CONSOLIDATED MINES, release of 120,000 shares from escrow with further 60,000 shares to be released on Jan. 31, 1960.

SNOW LAKE MINES, release of 178,460 shares from escrow.

TAURCANIS MINES, TSE filing statement in respect of offering of preferred share units.

WAYNE PETROLEUMS, option installment covering 200,000 shares at 20c a share not exercised and agreement terminated.

WESTERN SURF INLET, posted for trading on TSE as of Nov. 20, as substitution listing for **Surf Inlet Consolidated Mines** following capital reorganization and change in name.

Question:

How long can the market stay so inactive?

Answer: It'll probably stay like this until people expect it to get far worse. Then it will probably turn around and keep going higher until people expect it to get far better. You see, stocks have a habit of going down when people expect them to go up—and the market also tends to do the reverse of what the public expects of it.

Question: Do you mean it is a good time to buy now?

Answer: That's right. People who buy when the public sells—and sell when the public buys—can't help but make money over the long run. This is precisely the policy that has enabled Mitchell clients to move in at the bottom and out at the top of virtually every major turn of the Canadian market in the past ten years.

Question: Is this all I have to know to make money as a Mitchell client?

Answer: We'll also help you develop a sense of timing and an appreciation of the important factors that make prices go up and down. Six weeks of trial service will be enough to tell you whether or not you'll make money with us. If you want to give yourself a good start there's no better time to start than now, when prices are artificially depressed. Send $5.00 for six weeks of trial service and a free copy of our revealing booklet: Making a Business of the Stock Market, to:

MITCHELL OF CANADA INC.,

ANNOUNCEMENT

LABATT'S EXECUTIVE APPOINTMENTS

JOHN P. LABATT — J. D. VARNELL — D. G. McGILL

J. H. Moore, President of John Labatt Limited, announces the appointment of John P. Labatt as Vice-President in Charge of Marketing. Mr. Labatt is a fourth generation member of the family which founded the brewing Company.

Mr. Labatt succeeds J. D. Varnell who continues as Vice-President and will be responsible for the growing national aspects of Labatt's public relations and advertising programs. Mr. Varnell joined the Company in 1943 and has wide experience in developing marketing programs.

D. G. McGill is appointed General Manager of Labatt's Manitoba Division in Winnipeg succeeding Mr. Labatt who moves to the Company Head Office in London to assume his new responsibilities.

MOVE INTO THE NEW DECADE WITH . . .

"25 BEST CANADIAN STOCKS FOR 1960"

THERE'S something about a new decade—as witness 1950, only ten years ago, when industrials and base metals on the TSE moved without correction along one of the steepest year-long advances in history. How about the 1960s? With the price of copper firm for months to come, with certain industrial securities now undervalued by 25% to 50%, with science and technology on the springboard of still another new era and with an explosive boom awaiting nothing more than the end of the U. S. steel strike, it doesn't require a doctorate in investment finance to project the trend. Once again the only direction is up, and from a list of hundreds we've selected a handful of choice securities for capital appreciation as a new trading cycle commences its big swing around the circle. For the best that the Canadian market has to offer today, here in brief is what our new book will lead you to:

5 HIGH-YIELDING INDUSTRIAL STOCKS—selected above all for safety, growth, regular income and significant appreciation. Strong at current prices and with earnings on the upside.

5 MINING STOCKS—with emphasis on the coppers and earning a profit from current production. Underpriced from the standpoint of earnings, reserves, assets and market potential. Leaders of the pack during a major swing up.

5 DIVIDEND-PAYING GOLD STOCKS—well positioned for increased trading values over the next 3 to 12 months and with longer-term outlook for taking over the market in the event of any revaluation of the yellow metal.

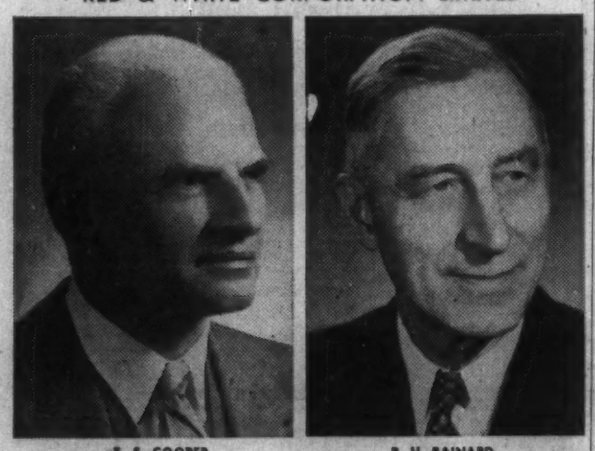
5 SPECULATIVE MINING AND OIL STOCKS UNDER $2 and as low as the pennies—all property bets with above-average potential for steep, fast runups. Aggressive sponsorship and adequate financial backing.

5 GAS AND OIL STOCKS—held back for a year now and trading along downside levels for the big rally that overdue cycles inevitably realize. Greatly underpriced and backed by companies with strong finances and excellent properties.

THIS new book (retail value $4.95) is yours without cost when you become a subscriber (either on a trial or regular basis) to our 8-page weekly bulletin, THE CANADIAN FORECASTER. Address your requests to 238 Adelaide Street West, Toronto. A 60-day trial is only $5 ($5.50 airmail) and our additional services include, also without extra charge, personal attention at any time by phone, mail or conferences at our central offices. Annual fee—$45.

ANNOUNCEMENT

RED & WHITE CORPORATION LIMITED



E. S. COOPER — R. H. BAINARD

The Board of Directors of Red & White Corporation Limited announces the appointment of Mr. E. S. Cooper as President of the Company and of Mr. R. H. Bainard as Vice President.

Mr. E. S. Cooper is also President and General Manager of Western Grocers Limited, Winnipeg.

Mr. R. H. Bainard is President and General Manager of National Grocers Company Limited, Toronto.

The

MINERAL EXPLORATION CORPORATION
Limited

COMMON SHARES

Mineral Exploration is successfully exploring for natural gas in Southwestern Ontario where interests are held in more than 270,000 acres.

Initial production from the Guilds Gas Field block scheduled to start under contract at a premium price on December 1st, 1959.

Price: At the Market
About $1.25

Mail and telephone orders will receive prompt attention.

Quebec Lithium Boosts Earnings

Before the cancellation of its sales contract with a large U. S. buyer, **Quebec Lithium Corp.** scored a gain in profits in the first seven months of 1959.

Estimated earnings for the period to July 31, were $431,166 or 16.9c a share, ahead 27% from $338,768 in the same period last year.

The cancellation of the agreement in July has forced the company to suspend its mining operation as of the end of November.

An adequate stockpile of spodumene concentrates is on hand for shipments to the glass industry and for treatment in the company's new refinery.

President Pierre Beauchemin says that operation of the refinery should start after completion of construction in early January.

Here are the operating results for the seven-month period:

	—7 months to July 31*— 1959	1958
Tons milled	117,296	95,178
Net production	$1,378,993	$1,336,987
Other income	19,830	5,754
Operating costs	669,835	705,434
Administration	27,754	34,540
Outside exploration	1,625	.....
Depreciation	251,118	250,299
Que. mining tax	17,325	13,700
Net profit	431,166	338,768
Earnings per share	16.9c	13.3c

*The results are based on financial statements prepared by auditors for the taxation year to July 31. Company's exemption from taxation ended on July 31, 1959.

East Sullivan Net 5c Share

In the nine months to Sept. 30, 1959, **East Sullivan Mines** earned an estimated net profit of $219,125 or 5c a share.

Comparable figures are not available for last year. In 1958, net loss for the full year was $265,214.

Net metal production at the northwestern Quebec base metal operation totaled $2,390,085 during the period.

A total of 718,405 tons of ore were milled. Operating costs totaled $1,635,575 and depreciation charges were $465,485.

Montgary Plans Reorganization

Montgary Explorations plans a reorganization of its capital on the basis of one new share for each 2½ old shares.

A change in name is also planned. The proposals will be presented to shareholders at the annual meeting on Dec. 7, 1959.

President G. A. McCartney says that arrangements have been made for design of a 200-ton-per-day concentrator which would be constructed at the Bernic Lake area lithium-cesium property in Manitoba.

Sullivan Cons. Earns Profit

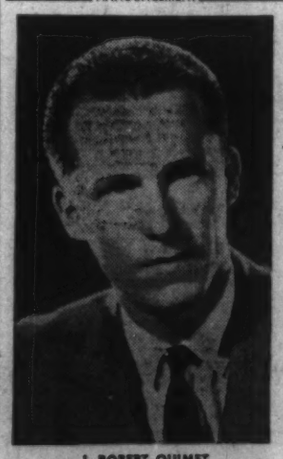
Sullivan Consolidated Mines earned an estimated $18,747 net profit in the 10 months to October 31, 1959. Comparable figures are not available for the same period last year. In the full year 1958, net loss was $109,488.

Gold bullion output in the latest period totaled 34,495 oz. with a net value of $1,156,206. Estimated cost-aid payments totaled $267,911.

BELGO EXPANDS

Belgo Canadian Mfg. Co., will move into a new plant early next year, providing 60,000 sq. ft. of offices, showrooms, manufacturing and warehouse space, located at 5255 Ferrier St., just off Decarie Blvd., and close to Metropolitan Blvd., Montreal. Belgo imports lines of Fisher lighters and smokers' supplies and handles a large volume of imported radios, giftwares and smallwares. Company will expand its own manufacture of copper pot cleaners, welding and gas lighters, lighter flints and lighter fluids.

ANNOUNCEMENT



J. ROBERT OUIMET

J. Robert Ouimet, son of J. Rene Ouimet, prominent Canadian industrialist, has returned to Canada after completing extended studies in Europe.

Mr. Ouimet was granted his Master's Degree in Political and Social Sciences from the International University of Fribourg (Switzerland), after which he visited the Middle East and North Africa to conduct post-graduate research studies in the economic and social spheres.

Mr. Ouimet, who received his Master's Degree in Commercial Sciences (economic) three years ago at the School of Higher Commercial Studies of the University of Montreal, is now working towards the degree of Master of Business Administration (M.B.A.) at Columbia University.

After completing this advanced stage of his studies in marketing and finance, he will assume executive responsibilities in the Ouimet enterprises, J. Rene Ouimet Ltd. and Cordon Bleu Ltd.

What Tungsten Strike Means

The tungsten discovery near the Yukon-Northwest Territories border grew out of the **Mackenzie Syndicate** formed early in 1958 by Karl Springer and his associates.

The syndicate sent five parties of prospectors into a belt of promising mountain rock about 150 mi. long and working north from the Toad River area. It raised $240,000, spent $170,000 on the tungsten find.

Tungsten was found at the end of the 1958 season in talus on the mountain and was secretly drilled last summer (11 holes), sampled on surface with these results:

- **1,166,351 tons averaging** 2.184% or 2,547,310 short ton units of WO_3 (tungsten trioxide). A unit (a 60% concentrate) is selling at about $17.
- **That's enough material** to support a 300-ton daily capacity mill for 10-12 years.
- **The find has not yet been delimited.** Further work is planned for this season.
- **The deposit is flat-lying** about 1,200 ft. up the side of a mountain. It is like the filling in a layer cake and lends itself to open-pit mining. The mountain continues up for another 1,500 ft.
- **So far, about $250,000** has been spent on exploration and development. The program planned for this year is expected to cost $400,000 to establish the base and equipment for a drive toward production by the fall of 1961, reports Springer. Cost for 300 tons daily ore capacity would be about $5 million, he estimates.
- **The property** is an 83-claim group staked 6 mi. along strike with other unexplored tungsten showings occurring along a 5-mi. belt.
- **The tungsten ore** is scheelite (calcium tungstate $CaWO_4$) and is a regular disseminated replacement deposit containing some copper. Most known tungsten ore occurrences are irregular in veins and dykes.

When it became evident that the deposit was shaping up as one of the world's richest, the syndicate formed a company to take over — **Canada Tungsten Mining Corp.**

The new company raised $125,000 from syndicate members and spent about half on drilling and carrying the property to its present stage.

Canada Tungsten has two million shares issued of five million authorized.

This is a breakdown of holdings:

Leitch Gold Mines, 290,496 shares; Highland Bell Mines, 290,496; Area Mines, 290,496; Dome Mines, 290,496; Ventures Ltd., 290,496; Lake Expanse Mines, 96,832; J. J. Rankin, 96,832; Karl Springer, 253,856; prospectors, 100,000.

The first four mines listed were four-sixths of the **Mattagami Syndicate.** Leitch, Highland Bell and Lake Expanse are part of Springer's interests and Area Mines represents a close associate — J. M. R. (Dick) Corbet.

In the Mackenzie Syndicate (still continuing the search for minerals in the mountain range), Leitch, Highland Bell, Area, Dome and Ventures have 15.29% interests respectively while Lake Expanse has a 5.1% interest. Springer, Rankin and prospectors also share.

The syndicate has also located lead-zinc mineralization.

The property includes a long gravel bench which is expected to be readily developed into a permanent air strip.

It is being used this winter to bring in heavy supplies so that drilling might resume. Some 6½ tons of material has been prepared for shipment outside for pilot mill tests.

Next summer's program will drill off the known deposit, complete the airfield and roads to the deposit, move in heavy equipment and supplies and work on a second important showing some 3.5 mi. southeast of the main showing. This second showing has indicated a 12 ft. width and 150 ft. length averaging 4.5 % WO_3.

They Share in Find

	Recent Price	Mid Nov.	— 1959 — High	Low
	$	$	$	$

Here's Why Tungsten Needed:

Tungsten is a key industrial mineral, vital to the steel industry and becoming increasingly important in the space age.

The metal is a brilliant white with the highest melting and boiling points of any metals.

This makes it highly desirable for uses requiring stability under extreme heat conditions. Melting point is 3,370 deg. C., boiling point 5,900 deg. C. Tensile strength of 590,000 lb. per sq. in. is greatest of any metal.

Tungsten alloys are used in high-speed steels for cutting tools (tungsten carbide bits in diamond drilling) and research is uncovering new ways of handling tungsten to broaden its uses.

It was vital during World War II as a key ingredient in armor piercing shells and considerable tungsten production was carried out by the U. S. and Canadian governments.

Production in North America has been sliding and U. S. steel mills depend on South Korea, Bolivia and Brazil. China is believed to be the largest world producer.

The U. S. has encouraged high-cost tungsten production throughout the world and the last Canadian producer — the Emerald tungsten mine in British Columbia—closed down last year when it completed its contract with the U. S. These deposits had grades running a little under 1%.

World prices of tungsten collapsed in 1958, hitting as low as $8.50 a unit (20 lb. WO_3) where at one time the U. S. had paid domestic producers more than $60. **Canadian Exploration,** owner of the Emerald, received $55-$60 a unit for some of its production.

Major reason was the influence of stockpile programs which ended. However, prices have since recovered to around the $17 range. Many mines throughout the world closed and are not expected to reopen until the price nears $30.

These "birds" have to fly fast!

An urgent wire asked A. G. Spalding & Bros. of Canada Ltd., Brantford, Ontario, for a shipment of shuttlecocks for a badminton tournament in the Maritimes. As they often do in shipping hockey equipment, gift sets of golf clubs and many other items, Spalding sent the "birds" by Air Express. Today, Spalding knows it can rely on this swift, modern method. Time after time their call to the local Air Express office results in rapid pick-up and delivery (*and satisfied customers for Spalding*).

Fast, dependable Air Express gets your package there on time, *in the shortest time.* Your Air Express office is open to serve you 24 hours a day . . . is standing by to pick up and deliver *now.*

This **FREE BULLETIN**
will help you answer
the most vital question
in today's trucking industry—

Will DIESEL POWER reduce your costs?

Why Diesel?

There is a growing trend towards diesel power in the heavy-duty trucking industry —in spite of the greater initial cost of diesel engines in some cases.

Experience over the years has demonstrated that diesel engines operate with greater efficiency than gasoline in certain applications. This shows up in higher *consistent* power—and in impressive fuel savings.

Longer life before engine overhaul is another diesel benefit that has influenced this trend. This free bulletin describes the characteristics of diesel engine performance in detail. *It will help you decide whether diesel engines will reduce your operating costs.*

An International Truck representative will gladly discuss your operations with you at your convenience. He can analyse your operating conditions and recommend the type of power best suited to your needs.

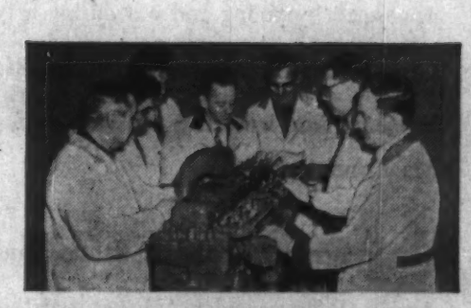
Why Rolls-Royce?

Rolls-Royce enjoys a world-wide reputation for engineering skill and craftsmanship. Their diesel engines reflect this leadership.

The combination of Rolls-Royce Diesel engines and International *Balanced* Truck Engineering has set new standards of efficiency and operating economy.

Canada's most complete diesel truck service organization is another reason why so many leading truck operators are choosing International Trucks with Rolls-Royce Diesel engines.

At special diesel engine service schools organized by International, hundreds of their dealer and branch service personnel from across Canada have been thoroughly trained in every phase of diesel service by Rolls-Royce technicians.



Complete Rolls-Royce parts inventories are being stocked at International Truck service centres from coast-to-coast.

Canada's most complete line of trucks
INTERNATIONAL TRUCKS
including heavy-duty units powered by ROLLS-ROYCE *Diesel Engines*

people come to welcome . . .

The biggest single salesman in the world

Santa Claus. Booted, bewhiskered master salesman. Crowd-puller par excellence. Here you see him being acclaimed by young and old during a typical Santa Claus parade. A huge crowd, but small in comparison to the millions who read and shop through Weekend Magazine every week.

The tremendous appeal of Santa Claus cannot be denied. It is no accident. He has something for everyone — of all ages and incomes.

In like manner Weekend Magazine meets its millions of readers week after week, catering to the tastes, preferences and interests of people of every class and every age. Whole families read through its pages at their leisure, in their homes — a relaxed and friendly gathering of money-to-spend prospects, preconditioned to respond to the advertisements they see in Weekend. It is under such conditions and in such surroundings that the influence of advertising reaches its highest peak.

The total circulation of Weekend Magazine with its French language edition, Perspectives, is in excess of 1,790,000 — at least 700,000 *more* circulation than any other magazine. It provides coverage of four out of ten of *all* the homes in Canada.

Markets are people and Weekend Magazine with its French language edition, Perspectives, reaches *more people* than any other magazine in Canada

the biggest single selling force in Canada

AUSTRALIA

a feature report

Big as the United States, empty as Canada, and challenging Canada's pace of development. The push is on in Australia, to open up the wild, inhospitable interior for White settlement, to build up industry, to expand the essential services—water, power, transport, education. Trade expansion is a must. Australians want more trade with Canada and other Western countries, even while they look to Asia for new markets. They offer many opportunities to enterprising foreign investors. They are vigorously applying modern science and technology to their own problems. Australia is a vast lonely continent in the Pacific, a friendly country. Between Australians and Canadians there is every ground for understanding and mutual help: both are tackling the same problems: both are opening new Frontiers. "It would do us both a great deal of good," says the Australian Prime Minister, R. G. Menzies, "if Canadians take a part in our expansion." FP presents this special report on Australian development. Australian leaders in business, Government and the humanities write on their progress and problems. Descriptive commentary is by FP's Ottawa Editor, Michael Barkway, who recently traveled more than 30,000 miles, and visited every Australian state, to compile this Special FP feature report.

Moving Forward with Australia

The huge Massey-Ferguson plant at Sunshine, near Melbourne, Australia, covers an area of 2,784,079 square feet, half of which is under roof. Established in 1906, the plant produces for home and export markets a wide range of combines, drills, plows, balers and mounted tools for attachment to Ferguson System tractors.

AUSTRALIA, vast island continent of sharply contrasting climatic and soil conditions, produces primary foodstuffs of infinite variety.

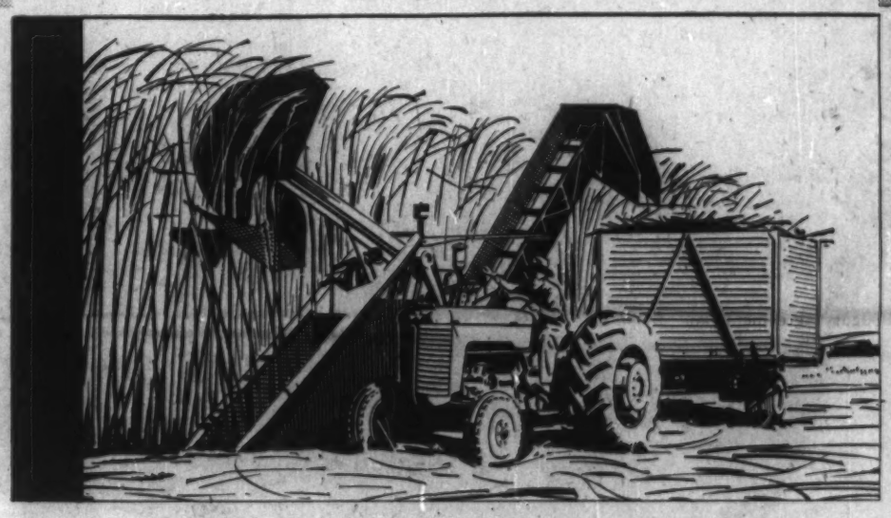
From the tropical north-east coastal belt of Queensland, where sugar thrives, through the prolific and versatile Darling Downs, to the lush cropping and grazing holdings of New South Wales and Victoria and the broad acres of South and West Australian grain growing, you will find almost every conceivable type of farming practised . . . almost every known crop grown.

Sugar, peanuts, pineapples, wheat, oats, tobacco, wine, dried fruits, barley, safflower, linseed, sorghum, rye, cotton, rice, mustard, bananas, oranges, beef, wool . . . these are just a few of the things that make the agricultural industry the backbone of Australia's economy. Efficient farm mechanisation is basic to the successful distribution on competitive world markets of the products of this great farming continent. That is why Massey-Ferguson has such a big stake in the nation's future. Massey-Ferguson Combines, designed and built in Australia for Australian conditions, harvest the major portion of the country's huge grain harvest. There are more Ferguson System tractors on Australian farms than any other make.

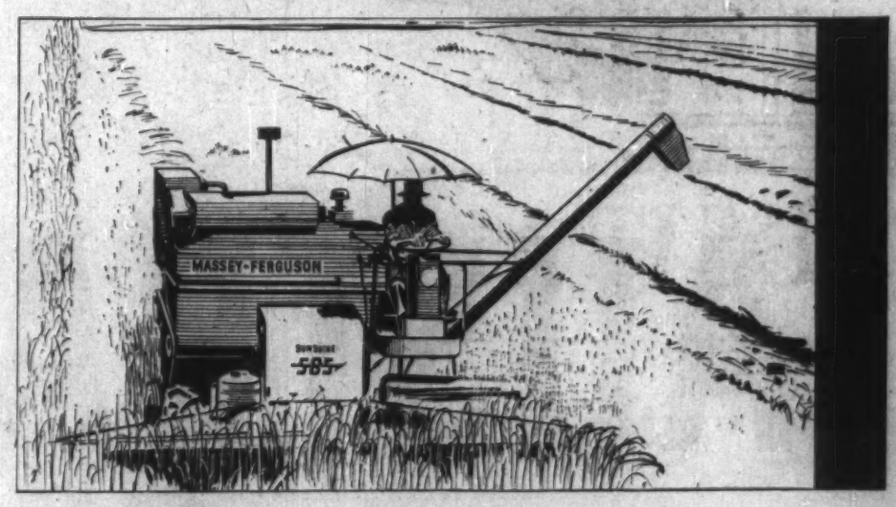
Recently the Company's engineers have developed for the important sugar industry in Queensland a revolutionary cane harvester which tops standing cane, chops it into foot lengths and loads it into a trailed bin in a continuous operation. This is a further illustration of Massey-Ferguson research and know-how providing fully mechanised harvesting of yet another major world crop — enabling maximum production at minimum cost.

Australian shareholders enjoy an investment partnership with Massey-Ferguson Limited of Canada in a thriving industry that allies Australian skill and ingenuity with the world-wide resources of this international organisation, in the continued development of a great primary producing nation.

Massey-Ferguson (Australia) Limited



Latest development by Massey-Ferguson engineers at Sunshine is the revolutionary Sugarcane Harvester, which tops and cuts cane, chops it into foot lengths and delivers it into a bin in a continuous operation. The sugar industry confidently expects this machine to provide complete mechanisation of cane harvesting.



Massey-Ferguson Combines dominate the harvest scene in Australia. The 585 Self-propelled Combine is the most modern and efficient manufactured in Australia and has been used to harvest a wide variety of cereals, fodder and small seeds crops. The 585 is shown working in a crop of grain sorghum on Queensland's Darling Downs.

The Ferguson 35, shown operating with the 503 Baler, is Australia's most popular tractor. There are more than 70,000 Ferguson System tractors working on Australian farms. With the recent introduction of the bigger MF65 Tractor, the Ferguson System is rapidly spreading through the Australian broad acres.

Trade: Question of Costs

A new agreement will establish preferences

If Canada and Australia are going to be able to hold their manufacturing costs low enough to sell in any world markets, they ought to be able to do good business with each other.

This is the view of trade experts in both governments, as they look forward hopefully to the conclusion of a new trade agreement between the two countries.

It is based on these two assumptions:

● **Experience shows** that increasing industrialization, and the growing population which goes with it, does not reduce a country's demand for imported goods, but increases it.

This is why Australian exporters are looking for increased sales in Canada.

And this is why Canadian experts think Canadian exporters could find rewarding opportunities in Australia.

● **The new trade agreement,** if it gets past its hurdles will establish new preferences between Canada and Australia on a lasting basis.

In both directions, the importance of preferential tariffs is increasingly recognized.

Ottawa is a long way past the days of a decade ago, when the government was prepared to bargain away preferences right and left. Too many areas are emerging, of which Australia is one, in which the Canadian hope of selling all kinds of goods in competition with the U. S. may depend on a preferential margin.

Australia, after its determined and successful attempt to free itself of the preferential rates bound to the U. K. in 1932, has not lost interest in preference by any means. It has escaped from what it considered an increasingly unfair bargain: now it wants to make new and fairer ones.

In terms of specific commodities, few suggestions are forthcoming from officials of either government.

But it is pointed out that both countries have developed certain specialty manufactures which might command a good market in the other—provided, for Canadian exporters, that the import controls which still weigh most heavily on manufactured consumer goods can be breached.

A sign of the Australian interest in resuming purchases from Canada was provided quite dramatically in August, when discrimination was removed from a considerable quantity of dollar goods.

One of the biggest department stores in Melbourne was immediately on the doorstep of the Canadian trade commissioner demanding all the catalogues it could get from Canadian manufacturers.

The store's buyers weren't fooling. They were looking for goods of a style and type which they could not get in Australia or the U. K.

If the U. S. could supply them, it was still interested in Canadian sources. The preference might well make them cheaper. There might also be a much better chance of getting something exclusive.

A major concern of both countries throughout the negotiations for a new trade agreement was to maintain the market for its existing exports to the other country.

On the Australian side, this meant, first, sugar and dried fruits.

Sugar is sold under the tight arrangements of the International Sugar Agreement and the Commonwealth Pact.

Dried fruit commands the market largely because of its preferential duty.

Wine is another case where the duty is important to Australia.

Michael Barkway, who has been **FP's** *senior correspondent in Ottawa for nine years, visited Australia late this year, to prepare much of the material in this report. He traveled nearly 9,000 miles around Australia by air, visited all the State capitals, interviewing leaders of government and industry. Mr. Barkway also spent some time in Canberra, interviewing government and opposition leaders and senior officials.*

Lamb—which already has an assured market in Canada, provided it is permitted entry—raised the difficulties about quota assurances reported elsewhere.

Canned meats, raw wool and various kinds of canned fruit (chiefly pineapple) are all things which enjoy some sale here, and the Australians would like to enlarge it.

They were also interested in a number of fish products—such as crayfish tails and tuna—which they hope to sell in increasing quantities to North America.

On the side of Canadian exports, four major items appear, at first glance anyway, to be in danger of being cut back rather than extended.

▸ **Newsprint.** The effect of uneconomic production by the newspaper-owned mill in Tasmania has already been felt as fully as it ever will be. The mill doesn't even buy its essential requirement of chemical pulp from Canada, now that it has found a satisfactory substitute from the newly-developed newsprint industry in New Zealand.

N. Z. newsprint also now looms as the main threat to Canadian sales.

▸ **Planks and boards.** Future sales of West Coast timber depend almost entirely on the Australian government's import licensing policy.

It was Canada's second largest export, after newsprint in 1958, in spite of being still subject to discriminatory restrictions.

Australia has been making great efforts to extend the range of its own forest use—both by devising means to use its native hardwoods for purposes normally reserved to softwoods, and also by developing plantations of softwoods as quickly as possible.

These plantations, however, are largely of a fast-growing N. Z. tree called pinus radiata.

There is no doubt that if users had free access to North American fir (which they refer to as 'Oregon', although they buy most of it from B. C.), they would take it every time in preference to pinus radiata, and would also revert to it in place of Australian hardwoods which have been adapted for use as substitutes.

Removal of import discrimination would also be a blow to Malaya, which has been selling quite a lot of a redwood called maranti for building and similar purposes.

Australia is looking so firmly to Asian markets as outlets for its exports that there is bound to be some reluctance to cut off any Asian sales to Australia.

Nevertheless the government authorities speak as though they recognize that the end of discrimination is inevitable—and in not too distant a future.

▸ **Automobile parts.** In spite of the rapid and officially encouraged growth of the Australian automobile industry, Canada has continued to sell a substantial volume of parts and components.

But it has to be accepted that this is bound to be a diminishing trade.

The Australian industry is becoming more and more self-supporting and it would be a complete reversal of policy for import barriers to be changed in such a way as to arrest this development.

A more cheerful prospect is the end of discrimination against imports of complete automobiles from North America.

This, like the end of discrimination against lumber, is definitely on the cards.

The question is how many North American cars Australians will buy in preference to their own models and, even more crucial, will they be types made in Canada or will it be only a luxury market for the expensive cars which only Detroit supplies?

The policies of the big automobile companies will play a major part in deciding this question.

▸ **Aluminum.** The virtual monopoly of the Australian market which **Alcan** has enjoyed for many years, and sedulously tried to justify by maintaining full supply throughout the war, has already been broken by the government-owned aluminum plant in Tasmania, protected by import controls. Its production costs are considerably in excess of Alcan's world price.

A further anxiety has now arisen with the discovery of the Weipa bauxite deposits in Northern Queensland, which of course all Australians want to have exploited as quickly as possible.

The quick answer is that the Tasmanian plant, Bell Bay, looks like cutting a further swath into Alcan's (or anybody else's) share of the Australian market, because it has received approval for an increase in production.

But the Weipa deposit is in the hands of COMALCO, a company controlled by **British Aluminium,** in which **Reynolds** of the U. S. is now supposed to have the decisive say. (Alcan itself is also working on another part of the bauxite range).

In spite of repeated optimistic statements from various Australian authorities, the actual development of Weipa is likely to depend on a pretty sober appraisal of the whole world outlook for aluminum.

'Canada-Australia Are Trading Friends'

R. G. MENZIES
Prime Minister

As two units of the British Commonwealth of Nations with problems of development in a hard-headed, unsentimental world, Canada and Australia have been good trading friends for a number of years and have learned to consult with each other from time to time.

It is now 54 years since the first trade discussions between our countries took place. These have been followed by others to keep matters well regulated right up to the present day.

We have a good deal in common. For instance, we both export primary products—in our case, wool, wheat, sugar, dried fruits and meat: in your case, wheat, fish, timber and asbestos.

MENZIES

We both have encountered some big problems in disposing of our primary produce on world markets at reasonable prices.

Canada is our second-best customer for dried fruits (after Britain) and, for this reason, it is interesting to recall that about 70 years ago, the Chaffey Brothers, of Ontario, were responsible for founding our big dried fruits industry, with a present average production of 100,000 tons a year.

World scale engineering projects in our two countries highlight our development in recent years.

You have the St. Lawrence Seaway; we have our Snowy Mountains hydro-electric scheme, of which the first underground power station was opened early in November.

Eventually, the Snowy scheme's generators will have a total capacity of from 2½ to three million kilowatts, which equals 60% of the nation's total generating capacity at June, 1958.

The scheme will also provide a total of about 1,800,000 acre-feet of water a year for irrigation.

And, to continue the comparison still further, we feel that our two countries have a record of good administration which the commonsense of their citizens will ensure is maintained.

Part of the policy of these administrations has been the maintenance of large-scale immigration.

This immigration, coupled with natural increase, has given Australia one of the highest sustained rates of population growth in the western world — an annual 2½%. Our present population exceeds 10 million.

Our political traditions are much the same — founded on the mother Parliament of Britain. We are young countries, with Canada slightly the senior, with twin records of high population and economic expansions since the last war.

Climatically, of course, there is a great deal of difference, economically there is very little.

Your north is cold, our north is semi-tropical.

But, in one sense they are similar, they are both frontier areas.

We are developing our northern frontier as fast as we can, for economic and defence reasons, just as you are developing your north.

To do this as we would wish, we will have to keep on expanding our manufacturing industries.

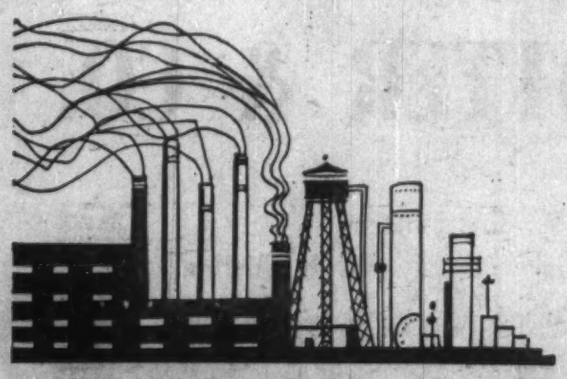
We would be pleased if Canada would maintain its participation in this expansion, because it would do us both a great deal of good, economically and sentimentally.

Australian controls on remittance abroad of net income from investment in Australia are not exacting.

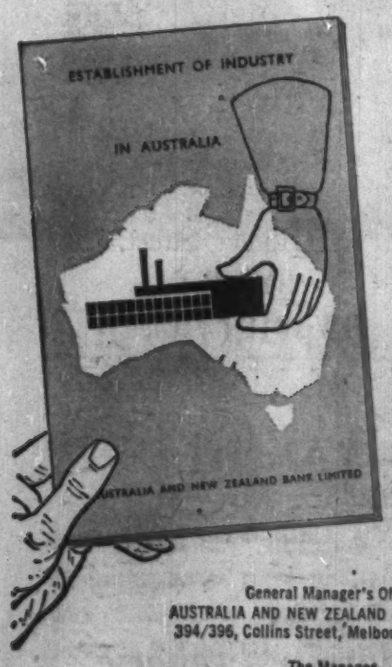
Although this remittance requires exchange control approval, it is present policy to allow all current net income after taxation, accruing to firms or individuals resident overseas, to be remitted without restriction.

Approval is also normally granted for overseas residents to repatriate capital.

In these matters, we value our reputation for fair dealing.



AUSTRALIA
for your Industry?



What is the market potential?

How will I be served as to communications, water and power?

Has Australia good labour relations?

How about wage scales and taxation?

What governs company formation?

You can find the answers to these and other vital questions in a fact-filled booklet "Establishment of Industry in Australia." Write for a FREE copy today, to:

Controls Territory Under U.N.

Canadians seldom think of Australia as a colonial power.

But the Australian government controls and administers several colonies, some as its own possessions and others as Trust Territories under the U.N.

The biggest are Papua and New Guinea, administered as one unit, although New Guinea is under U.N. trusteeship and Papua is an Australian possession.

The New Guinea Trusteeship territory includes the islands of New Britain, New Ireland and Bougainville.

The whole Territory is administered from Port Moresby. It has about 1,750,000 population, of whom only 23,000 are not indigenous.

As memories of the New Guinea campaign in World War II confirm, the area is full of steep valleys and hills, swamps, and torrential rivers. Rainfall is from 60 in. to 300 in. a year.

Native growers now contribute about 25% of copra, cocoa and coffee exported.

The growth of these industries themselves is evident in the increase in exports of coconut products from 46,383 tons valued at £2.6 million in 1948-49 to about 97,000 tons valued at £8.6 million in 1958-59.

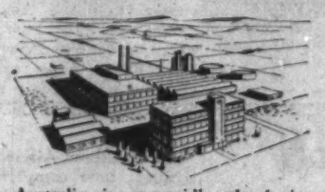
The increase over the same period in cocoa exports was from 200 tons to about 4,300 tons and coffee exports from 16 tons to about 1,000 tons.

Rubber exports over the same period increased from 1,198 tons to about 4,400 tons.

Mining and forestry are other important industries to which great government effort is being devoted.

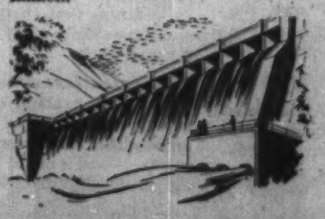
A comprehensive plan, under which there is an assured market in Australia for rubber from Papua and New Guinea at world prices (and, when prices are low, up to 3d per lb. higher) has already been of considerable benefit to Territory rubber growers.

There is unlimited opportunity for investment in Australia . . .

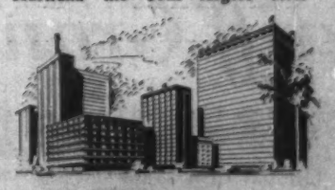


Australia is a rapidly developing country whose population now exceeds 10 million. In the last financial year Australia spent £425 million building houses, shops, factories and skyscraper offices.

A progressive, expanding nation, Australia, in the year 1957/1958 increased electric generating capacity by 313,430 kilowatts to a total of 4,570,543 kilowatts. The gross private expenditure on fixed capital equipment in the same year exceeded £1,000 million.



Since 1950 production of steel in Australia has doubled. A £100 million steel expansion programme has made Australia the 16th largest steel-



producing country in the world, and on a **per capita** basis the world's sixth largest steel consumer.

During the past decade private overseas investment in Australian companies exceeded £700 million. This year the net rate of inflow is expected to be well over £100 million annually. American investors are contributing almost one third of this.

Growing with the nation, The National Bank, with assets exceeding £313 million and more than 850 offices throughout Australia, is providing facilities for every important centre of population and potential.

You are invited to avail yourself of The National Bank's comprehensive knowledge of Australian affairs.

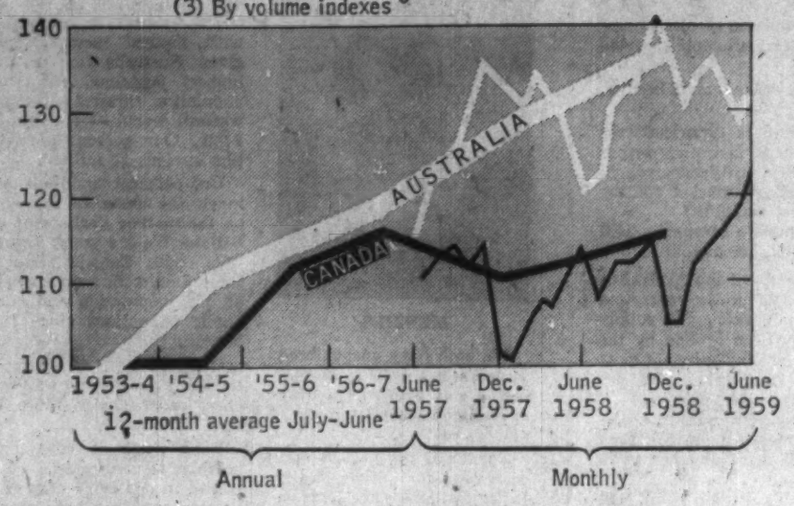
Manufacturing Growth

(3) By volume indexes °



° Australian official statistics do not provide a measure of production by volume. But since 1953 the ANZ Bank has issued an index of "Factory Production by Volume". It corresponds to the manufacturing component of Canada's Industrial Production Index, though not yet available with seasonal adjustments.

Agreement

Decision to the Letter

The basis for a new trade agreement between Canada and Australia was agreed between officials of the two governments in Canberra early this year.

Now, at the end of November, Canadian Trade Minister, Churchill, still holds out the hope, in his statement to FP, that the agreement will be completed in the very near future.

What has been holding things up?

The disagreement is not about the new tariff agreement worked out by the officials.

That is acceptable to both governments, and both consider it advantageous.

The delay is over a letter which is to accompany the agreement.

It is to be sent by Canada to the Australian government, and accepted by them.

And until it is sent, in an acceptable form, the new trade agreement will not be signed.

It would be a serious matter if the trade agreement were stymied.

It is needed because Australia is in the course of revising its whole British preferential tariff.

If Australian preferences to the U. K. are reduced, as they may be under the 1957 agreement, they will be reduced to Canada too.

The main items of trade between Australia and Canada, in both directions, depend very heavily on preferential treatment.

So quite a lot hinges on this controversial letter.

It involves — primarily, though there are lesser issues — one question of substance and also a wide matter of principle.

• The matter of substance is lamb.

As long ago as the Commonwealth Conference in Montreal a year ago, Canada undertook to renew the special low rate of duty on Australian lamb (1c lb.).

But the Australians are worried by Canada's readiness to clamp restrictions on agricultural imports.

They have watched, with mounting uneasiness, the measures taken to protect Canadian farmers from various U. S. agricultural exports.

And they have some experience of their own to make them wary.

By the existing trade agreement of 1931 they had very favorable low rates of duty, as had New Zealand, on dairy products — notably butter and cheese.

For many years now they have not been able to sell either in Canada.

In the new draft trade agreement, the special rates of duty for Australian dairy produce will not re-appear and the record will be a little straighter.

With this background, it is understandable that Australia should want some assurance that its favorable duty on lamb will not go down the same drain — by the use of some escape clause and the imposition of quantitative restrictions.

Canadian ministers faced the problem late in August. Agriculture Minister Harkness took a prominent part. And he got his way.

The letter approved by the Canadian government was not satisfactory to Australia.

What the Australians wanted, primarily, was an assurance that import restrictions would not be slapped on to Australian agricultural exports, at least without consultation.

And in the event of consultation they wanted a pretty precise formula to assure them of compensation.

What they got, in the Canadian government's letter, was a statement that Canada would not impose any import restrictions except as permitted by GATT — which meant, by one of GATT's loopholes.

Since the expected rejection of this rather empty assurance, efforts have continued to "work out a formula" which will give Australia some satisfaction and still meet Mr. Harkness' desire for freedom to protect his farmers.

The search was not made any easier by the announcement — slap in the middle of this delicate business — that Mr. Harkness was asking Australia and New Zealand to hold up their exports of lamb until the Canadian season was over.

As things stand now, there is a tendency on the Canadian side to feel aggrieved that the government's political difficulties are not understood and treated more sympathetically.

But from the Australian point of view, the nub of the problem is that the Canadian government seems so ready to yield before its political difficulties. It isn't that they don't understand the political difficulties of Mr. Harkness and Mr. Diefenbaker. They understand them all too well.

• There is more to it than just lamb.

John McEwen, the Australian Trade Minister, who is a man who knows his own mind, sees it primarily as a question of principle.

He has been leading a campaign, within GATT and outside it, to get a better deal for the producers of agricultural and other primary products. He launched it at the Commonwealth Conference in Montreal, where he got at least verbal support from the whole Commonwealth, including Canada.

It seems to the Australians that they should have a natural ally in Canada in this respect. McEwen himself, besides other Australians writing in this issue, stresses our common interest in getting a better deal for primary producers.

To be told, therefore, merely that Canada would stand by the GATT rules was not only unreassuring, it could have been taken as a bit of an insult.

From the Canadian side, again, it is argued that the Australians are in some risk of getting their principles confused too.

In their anxiety to assure markets for their agricultural products, it is said, they appear to be ready to trade tariffs against quotas.

Churchill's and McEwen's confidence that their two governments can get over the present difficulties is welcome and the results will be eagerly awaited.

Still To Choose Fighter

Choice of a new fighter aircraft to replace the front-line jets (Sabres and Meteors) of the RAAF still looms ahead of the Australian government.

There are reports about U. S. Air Force plans getting the same sort of play in Australia as in Canada, with opposition members using them to try to embarrass the government.

In a recent exchange the Minister for Defence reminded parliament that Australia's needs are not necessarily the same as the U. S. need.

This is even more obviously true of Australia than of Canada.

The kind of war likely to involve Australia's main effort is expected to be in South East Asia. The official view is that it would be a limited war. It would be fought with 'conventional', non-atomic weapons; and it would not involve large forces — at least not in the first few months.

This is the accepted strategic view on which defence equipment and production have to be based.

It follows, the authorities believe, that production facilities must be planned to meet the needs of a short, limited war. Any idea of large numbers of armaments factories, mass-producing the largest possible quantities of hard goods, is considered completely outmoded.

The problem posed for the Ministry of Supply, therefore, is how to keep factories operating at the required minimum level.

It would be difficult enough anyway — and it doesn't help that no one has very clear ideas — in Australia or anywhere else — what future weapons are going to be like.

But here, much more than in Canada or the U. S., the problem is concentrated on factories owned and operated by the government itself.

Some private companies are involved in aircraft programs and electronic equipment.

Sub-contracts are let out to private industry for various components, e.g., for the Australian - designed anti-tank missile, Malkara, and the Royal Australian Navy's building program.

But the main defence production effort is in government factories employing about 9,000 people.

Here are the principal projects on which they are now engaged:

• Aircraft.

Government Aircraft Factory, Melbourne, nearing end of contracts for Canberra bombers. In production on the Jindivik, radio-controlled target aircraft.

Jindivik was designed at the factory for use on the Woomera test range. It has been sold to both the U. K. and Sweden. It was wholly designed and is wholly produced in Australia. An advanced model capable of greater height is now in the design stage.

Commonwealth Aircraft Corp., Melbourne, has been engaged on the Australian model of the F86 Sabre (known as the Avon); on Rolls-Royce Avon turbo-jet engines; and a basic trainer. The Sabre order is almost finished.

De Havilland Aircraft Ltd., Sydney, now completing an order for Vampire jet trainers.

• Missiles.

Government factories are producing Malkara, an Australian anti-tank missile which has been adopted by the British as well as the Australian army.

Malkara is guided to its target by electrical impulses sent along wires which unroll from it as it flies. It is claimed to be effective against the heaviest tanks, and to be so accurate that there is an excellent chance of a kill with the first shot.

This accuracy, even at extreme range, should make it effective against fixed installations like bunkers or strong points — and it could be used against landing barges.

Propulsion unit, guidance system, airframe and warhead are all obtained in Australia.

Private firms have subcontracts for some important components.

The two government ordnance factories in Victoria are now engaged in making storage tanks to store the fuel for guided missiles. This fuel is so reactive that its storage requires very special tanks, with an inner lining of stainless steel fabricated to very strict standards.

• Rifles and ammunition.

The Belgian FN rifle, now adopted as standard by several NATO countries as well as by U. K., Canada and Australia, is now in production at the government small arms factory at Lithgow, N.S.W.

Complete interchangeability of parts has been achieved between Australia, Canada and U. K.

Ammunition for the rifle is being made in a new plant at the government ammunition factory, near Melbourne.

Only two years ago the government completed a new munitions filling factory at St. Mark's, N.S.W., at a cost of £26 million ($57 million). There had formerly been a deficiency in capacity for shell filling.

• Naval building.

The ordnance factories are also engaged on propulsion units for the naval shipbuilding program, which consists of destroyers and frigates.

They are also making armament, including anti-submarine mortars, 40 mm S.T.A.A.G. (anti - aircraft) mountings and 4.5" mountings.

Decide Tariff Grants

The Australian Tariff Board is now examining 275 b.p. items in the Australian tariff (at government request).

On some of them the margin between the b.p. rate and the m.f.n. rate is as great as 27½% (B.p. 20%; m.f.n. 47½%). On quite a number of goods — e.g. some synthetic textiles which Canada has a chance of -marketing in Australia — the preference goes up to 17½%.

The Tariff Board, under Chairman Dr. Alan Westerman, has been asked to report how many of these m.f.n. rates can be reduced without injuring Australian industry.

The intention is to try to re-classify the margins of preference into three classes, with margins of 7½%, 10% and 12½%.

• Where the rate is now 12½%, it is likely to come down to 7½%;

• Where it is 17½%, it is likely to come down to 10%;

• Where it is 22½% or over, it is likely to come down to 12½%.

This examination by the Tariff Board is to be completed in plenty of time for next year's new round of tariff bargaining under GATT.

Unless convincing cases can be made that certain Australian industries require the full protection of the present m.f.n. rate, Australia's bargaining cards with non-Commonwealth countries will be reductions in these rates much nearer to the present b.p. rates.

That makes 275 cards, minus any which are excluded for the sake of Australian industries.

These, of course, are not the only obstacles Canadian exports face.

The other two principal difficulties arise from import controls and what are called "by-laws".

The Australian system of import controls exists to protect the country's balance of payments. It isn't easy to foresee an end to it, though no one doubts that Trade Minister McEwen and the present government are genuinely anxious to get rid of it when they can.

In particular, they — along with most Australians — are growing increasingly aware of the danger of building up high-cost industry which cannot face competition in export markets.

VICTORIA

the fastest growing State in Australia — offers unrivalled opportunities for safe and sound investment . . .

VICTORIA HAS...

★ A rapidly rising population.
★ A buoyant consumer market.
★ Stable Government favoring free enterprise.
★ Excellent employer-employee relations.
★ A high level of employment.

Telegraphic and Cable Address: "Seahorse"

It's Big

But Not Lonely

By MICHAEL BARKWAY

WIDJIWA SHEEP STATION, N.S.W. (Staff) — "I suppose I shall have to go back to Canada without seeing a kangaroo," I said. I said it several times. But the only response I ever got from the city folk was a suggestion that I pay a visit to the Sydney zoo.

I suppose that was the only place where they had ever seen one. "But," I said, "I might as well go to the Bronx."

It was different when I got out here. This is a 72,000-acre sheep station, out beyond the wheat-sheep belt, in a dry purely pastoral country. It's one of the big estates, supervised for the owners by a manager, a young graduate of agricultural college called Peter Healey.

He is responsible just now for about 30,000 sheep, and a few cattle. They reckon this country should carry about one sheep for every two acres.

Peter Healey lives with his wife, who is expecting her first baby, in a well-equipped modern bungalow in the centre of the huge estate.

It seems lonely. There's no doubt about that. The distances between farms are greater here even than on the prairies. Yet it's only half a mile from the station-house, and Pete may move into it if the owners don't intend to use it regularly. It's quite a social centre.

In bachelor quarters at the back it houses five single men working on the property and next door is the school. Some big stations have a church for the local community. Here there is no church, but they are very glad to have a flourishing school — even though it's a little over-crowded.

The one teacher is a young man, and he has 27 pupils.

They are brought in each morning by a school bus just as in Canada. They come from six houses scattered around the station, where the married hands live. But these families have not contributed all 27 students. A few miles away, there's a small railway post, and the bus brings in the railwaymen's children too.

We had driven for hours to find this remote spot. First we were on the paved highway leading westward. Then we had 50 mi. or 60 mi. along earth roads. Most of the way they were in good condition.

One man, with a huge scraper (built in Australia) has charge of each long section of road.

This being a week-end, we passed his deserted scraper miles back. It was standing beside a caravan off the road at one of the few places where he could find a couple of trees for shade. Road mending seems to be a strictly individual project, and a pretty lonely one at that.

Where the man had worked, the road was very smooth and there hasn't been enough rain this year to spoil it. Often it's flooded at this time of year.

But when we came to his present scene of operations it wasn't so good. He had put up a hand-drawn sign saying: "Side Road", and pointing vaguely away to the right. This meant simply leaving any pretence of road, and driving as best we could along the rough surface of the "stock route".

Many of the road concessions here seem absurdly generous. Their fences are hundreds of yards apart sometimes. This applies on the main highways — even the Hume Highway between Sydney and Melbourne — as well as these rural routes.

Signs from time to time warn that you are on a stock route. That means that the stock have the right of way, at least during daylight. If you drive around a curve into a flock of sheep, you're responsible. But your liability is qualified at night.

You know the hopeless sort of way a flock of sheep dawdles along. A day's drive is supposed to be six miles. Behind the flock a drover ambles in a shabby old horse-drawn cart. Maybe half a dozen rather scruffy-looking dogs drift around the flanks of the flock, not hurrying them, and not making any attempt to clear them off the road if they happen to wander over it.

The drover is supposedly an expert at his job. A grazier moving sheep doesn't drive them himself. He hires one of these drovers, who make it a profession — if not a vocation.

About every six miles along the stock routes, at the end of each day's drive, the road concession widens out into a reserve of several acres. This is public land where the flocks can stop at night and find enough feed to keep them going for the next day's six-mile spell.

In dry weather like this, when feed is growing short all over, these nights' resting-places can be a bit of a temptation. A drover, or even a local grazier, welcomes a chance to pick up an extra day or two's feed at the public expense.

But the rule is "One night only." Then on next day to the next stopping place.

Just before we came to Widjiwa, we passed a row of six dogs — small, wiry, bad-tempered-looking — chained to a row of pegs on either side of the road. Nothing else was in sight, but they were barking their fool heads off. There were a good many yards between them even at full stretch of chains. But they formed a very effective barrier to prevent any sheep from drifting out of their night's reserve.

Pete Healey's house here has electric light from its own diesel plant, a modern coal stove, hot and cold water laid on, and every modern convenience.

A big verandah looks over the gay little garden. Down to the left, surrounded by high bushes, the creek makes a big pond.

Widjiwa is lucky to have this creek flowing through it. (If you traced it back far enough it would take you to the Murrimbidgee River.) Channels lead off it through which water can be supplied to pools in the corner of each paddock for the stock. It also supplies the Healeys' house, though they use rainwater for drinking.

The only unattractive thing about it is that snakes swarm along its banks. At night you cannot go out onto the verandah without a light, because it may be covered with snakes, and they can be poisonous. Mrs. Healey once found one in the bathroom.

Later, we drove across several huge paddocks and were in rougher ground before somebody spotted a dim shape in the distance that looked like a gopher.

He was sitting up on his enormous hind legs, among low bushes — an old man kangaroo.

Pete hardly had time to say "The rest of the mob won't be far away", when the old man started lolloping off and a dozen more kangaroos appeared above the bushes.

Within a minute the whole front view from the car was dotted with kangaroos of all sizes (but all of the same unmistakable shape) leaping away with their peculiar two-legged hops. Their front legs aren't used at all, and the big tail just jerks up and down as a balance. We checked speed, so as not to start a headlong rush and then we picked a pair heading away to the left.

A mother-kangaroo was moving in rather awkward jerks. Behind her was a "joey" of about half the size, and we guessed she was dawdling so that Joey could keep up.

We were quite wrong. As soon as Joey saw us, he leapt away with a terrific burst of speed. Ma kept after him though she was outclassed.

"I bet she's got another one in her pouch, too," said Peter, "I've never yet found a female that didn't have a little joey in her pouch. How they get there nobody knows. All the authorities say they are born like any other animal. They are barely an inch in size; yet somehow they get into that pouch immediately."

For all his hospitable and casual air, Peter Healey faced a very difficult decision.

If he didn't get several inches of rain within a few weeks, he might have to put all his sheep on stored feed. He's a prudent and knowledgeable manager. There was quite enough feed in his stores to keep his flock (of about 30,000) going through the Australian summer. They were shorn weeks ago.

But that would mean using up his feed reserve, which no one likes to do.

Here's the dilemma:—

- **The spring rains,** due in September, did not come. They might be late. October might restore the feed on his huge estate.
- **If he waited too long,** the pastures would be overgrazed and might be permanently damaged or the sheep would get too low to recover their vigor on stored feed.

He took it calmly and confidently.

But in its way, I thought, it was as difficult as any decision facing Mr. Fleming or the president of the Steel Company — and even more lonely.

As we drove away from Widjiwa, down the Stock Route, a rabbit ran across the road. It was as big as a hare and looked very healthy.

Myxmatosis - immune? I hope not. The kangaroos are enough.

Wagga Wagga, Land Of 'Many Crows'

WAGGA WAGGA, N.S.W. (Staff)—Wagga Wagga is a long way south of Sydney on the inland side of the Snowy Mountains. This is one of the principal "rural towns" which provides a centre for some of the best farmlands of New South Wales.

It's characteristic of the wheat-sheep belt, with an average rainfall of 20 in. or more spread over the year. The distinction between a "pastoralist" (or grazier) and a "farmer", which is still very sharp in most places, doesn't apply so strictly here. And it is becoming more blurred as new techniques are found to combine sheep-raising with wheat and other crops.

The name of this place, by the way, is pronounced "Wogga", and you only have to say it once. It's an aboriginal name. Wagga meant "crow", and Wagga Wagga meant "many crows". It's not clear whether they say "Wogga" only once because they have long since disposed of the crows, or because of the Australians' general dislike of waste labor.

The country around doesn't look lush by the standards of southern Ontario or the eastern townships of Quebec. It looks more like the farming land on the edge of the Canadian Shield or the more barren parts of the Maritimes, with a good deal of rock and a little vegetation that doesn't look rich enough to feed anything.

The trees are gums of different kinds, with light trunks of varied colors and wonderful shapes but their foliage looks grey to a Canadian eye, rather than green.

The freshest-looking things in the landscape are the willows which have been planted along the creeks and streams to stop erosion.

But in recent years they have discovered what can be done with this land. Proof of it can be seen on the farm of Mr. Keith Dunn, whose complete postal address is easily remembered.

It is:

"Book Book,
Wagga Wagga,
N.S.W."

"Book Book" is not the responsibility of the aboriginals. It comes from the hoot of the owls which abound around the farm house.

Up behind the house—with a garden which anyone in Victoria, B.C., might envy—you can see over the whole 5,000 acres of the property.

Behind you the hills stretch back into the mountains, sparsely covered with rather scrubby gum-trees. In front is the wide sweep of a flat valley-bottom.

Looking across to the gentle slopes on the other side, Keith Dunn told what he was doing in each field—or, as the Australians say, "paddock".

The brighter greens came from young wheat, another green from lucerne. But even the paddocks carrying sheep or cattle looked very different from the hill where he stood.

The difference is apparent right at his feet. At the bottom of the little knoll is a paddock reaching to the farm buildings. On one side of the fence the earth is barely covered. On the other side the vegetation is a good 6 in. high, and two or three good spring rains would raise it a foot or more.

The spring rains didn't come as usual in September. The land needs two to three inches now, and about as much again in a week's time.

But even in this distressingly dry season, the contrast between the "improved" and "unimproved" land was sufficiently striking. Mr. Dunn said there were three things that could double the productivity of this wheat-sheep country.

He listed them:

- **Liberal doses of superphosphate.** This is already standard practice in most areas.
- **"Subterranean clover",** which has come to this country as something like a miracle. At first sight it doesn't look different from any other clover. But it grows its seeds a little under the surface. It flourishes here and spreads quickly. And it has the great virtue of drawing so much nitrogen from the air into the soil that once it is established you can plant other selected kinds of grass, and they will do well.
- **Mineral trace elements.** In recent years the C.S.I.R.O. has developed techniques of soil analysis which enable it to detect the lacking mineral elements in soils and to supply them.

On the Book Book property it was molybdenum which was needed.

Two or three ounces of molybdenum were added to the usual hundredweight of superphosphate for each acre. The mixture was sprayed over the paddocks from aeroplanes.

This dose, with the planting of subterranean clover, has doubled the productivity of Book Book.

Its "natural" capacity was about one sheep to the acre. Where it has been treated it can now carry two.

This sort of operation is not conducted on a shoe-string. On Book Book's 5,000 acres, he runs at the present time 3,600 sheep and some 700 cattle. He grows wheat and other feed crops, both for his own use and for sale.

Twelve men are employed on the farm.

One of the major sources of annual income is due about now.

The wool clip from Book Book is to be auctioned, and Mr. Dunn is speculating what price he will get. The experts say it should be worth £20,000 to £30,000—say $44,000 to $65,000.

It's because such a large part of that goes back into the farm each year that Book Book is something of a show place, steadily increasing in production and value.

From Australia's sunny vineyards
come the world's finest dried fruits

World demand for Australia's dried vine fruits is such that 30 different countries buy up about 80% of Australia's total crop. And this demand is steadily rising. Canada this year is buying a record share of 20,400 tons, or 85% of her total dried fruits consumption.

Grown in sun-drenched vineyards which stretch across vast irrigation areas, Australian fruits are wholly dried in the sun too. They retain as much as 80% of the natural fruit sugar, compared with about 65% in the dried fruit from other countries. That's why Australian sultana raisins, currants and lexia raisins are so delicious to eat and so rich in health-giving vitamins and minerals.

Australia is the third-largest producer of vine fruits in the world. Annual crop value is around $26 million.

For all trade enquiries contact the Australian Trade Commissioner in Montreal or Vancouver.

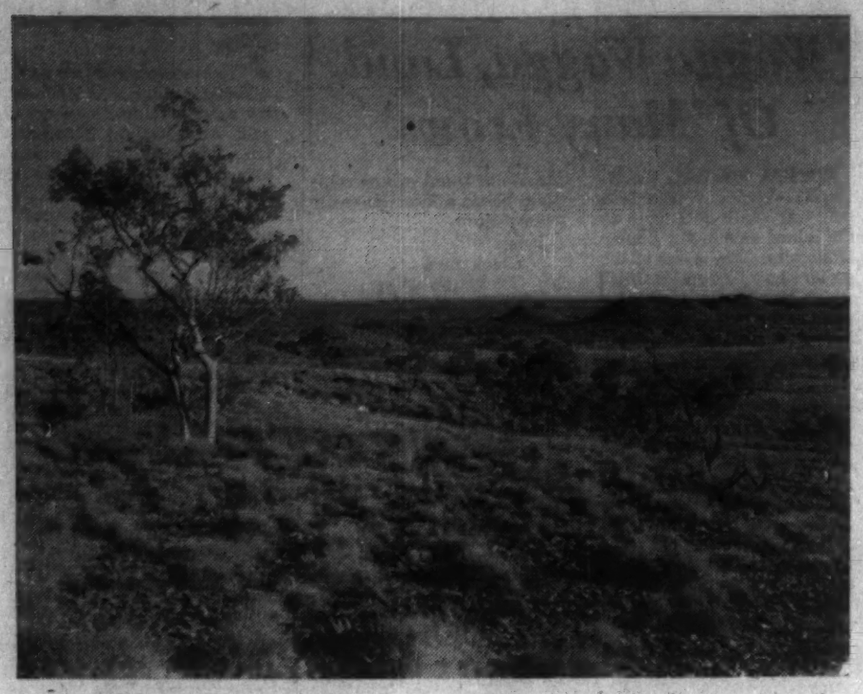
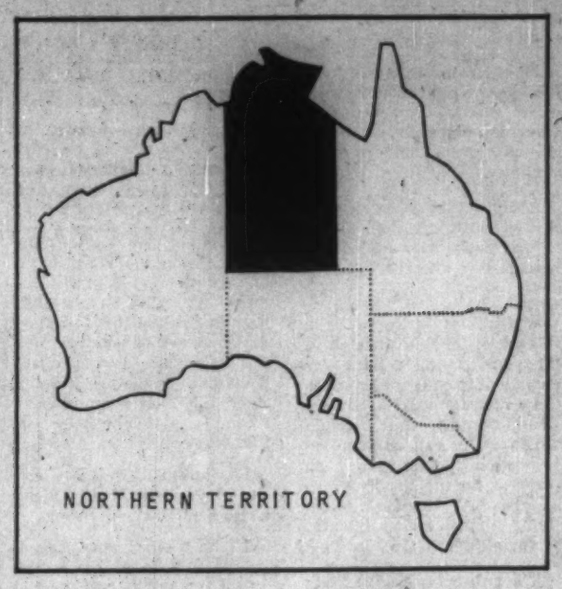
The Australian Dried Fruits Control Board at 24, Jeffcott Street, Melbourne, Victoria, Australia.

AUSTRALIAN DRIED FRUITS CONTROL BOARD



VEGETATION in the Northern Territory has adapted itself to survive dormant during the long dry season. Four-fifths of the area lies in tropics, is in process of development.



The North

A Familiar Problem

Talking about the Australian North in Canberra is just like discussing the Canadian North in Ottawa.

First, you hear from the hard-headed people, who dismiss it as a hopeless proposition.

"You'll never do anything with that country," they say.

Then, you meet the optimists and the idealists. They talk like men with a mission, and they tell you there are unlimited possibilities.

In Canada it's the agricultural possibilities of the Mackenzie Valley they tell you about, or the oil fields of the Arctic Islands.

Here, they envisage as much as 10,000 - 20,000 sq. mi. of the northern coastal regions, covered with crops of peanuts or rice, providing rich feed for a large population of fat cattle.

This could be, they say, a major exporting region, and a natural economic - geographic region in its own right, no longer dependent on the rest of the country.

The balanced view, in Australia as in Canada, is hard to find. Presumably it must admit all the difficulties, but not deny that possibilities of economic use may be discovered.

The Australian problem is almost absurdly similar to the Canadian one.

The northern area, which the Commonwealth Scientific and Research Organization has surveyed in a study that has been going on since 1946, covers about 600,000 sq. mi. This is the economic region, extending beyond the limitations of the actual Northern Territory into the States of Queensland and Western Australia on either side.

The Northern Territory itself, governed from Canberra as the Yukon and Northwest Territories are governed from Ottawa, covers about 525,000 sq. mi. This is much smaller than the N.W.T. and Yukon combined, but it is more than twice the area of the Yukon alone.

Government is, in fact, administered in very much the same way — with as much responsibility as possible left to a local council.

The Whitehorse of the Northern Territory is Darwin, where an administrator appointed by the federal government (equivalent to the Commissioner of the Y.T.) has his headquarters.

His council, known as the Legislative Council of the Northern Territory, consists of six nominated members and eight elected members, and has power to make local ordinances.

Again, as in the Canadian North, half the population consists of native peoples. There are about 16,000 aboriginals and about the same number of "white" Australians.

Australian policy towards the aboriginals has gradually evolved from the idea of protecting them and shutting them away in segregated communities. It is now directly and consciously aimed at assimilation.

Canadian policy is moving in the same direction, certainly in regard to the Indians and to those of the Eskimoes who are being brought into touch with the "white" men.

The decisive step in Australian policy was the Welfare Ordinance of 1953, as it was called, which took place of what had been called the Aboriginals' Ordinance.

Annual expenditure on the welfare of the native people is now well over £1 million, and it is supplemented by a government subsidy to Christian missions which exceeds £250,000. (Expenditure is equivalent to between $2.5 million and $3 million.)

This just for native welfare. The budget for the Northern Territories last year was nearly £8 million ($17 million), much of it being spent on public services.

Another striking parallel with the Yukon is the role that gold-mining has played.

The Klondike wasn't discovered till 1896.

The first gold strike in the Northern Territory was in 1865.

Gold production still almost equals the value of the pastoral activities, and the uranium of Rum Jungle lifts mining higher in importance.

But even so it is small compared with the continued output of the Yukon's creeks. Gold output last year was worth £4 million ($9 million, compared with about $38 million from the Yukon).

For 50 years the Northern Territory has been regarded as being useful — in parts — only for cattle ranges. Aborigines make excellent stockmen, and 2,200 of them are employed on vast cattle stations carrying about 1,250,000 head.

One of the main difficulties of the cattle-raising in these parts shows signs of increasing as the taste and habit of eating high quality beef spreads.

The feed isn't good enough to produce fat cattle, and the ranges have to be run on a highly 'extensive' system.

To fatten the cattle, they have to be driven hundreds of miles to more productive regions of Queensland.

If the weather is not favorable, and the feed along the stock routes gets used up, such long drives may be quite impossible.

Even at the best of times they mean that only mature cattle will reach the end of the line, and then not in the best of conditions.

A means of fattening cattle in the northern country would make all the difference.

This is what the CSIRO thinks it can provide.

Out of the 600,000 sq. mi. of its survey, it has concluded that about 10% — along a narrow coastal strip — could be used for arable farming.

Selected areas, where research stations have been established, could be used—the CSIRO planners confidently say — for intensive settlement.

First, there is an area of light and medium-textured soil covering at least 3,000 sq. mi. and possibly as much as 10,000, which could support a system of stable mixed farming based on peanuts.

It has only one short growing season though the rainfall comes to as much as 35 in. a year. Heat, and high evaporation, made people think it couldn't support a stable agriculture.

But the scientists claim to have proved at their Katherine research station that it can.

The important point about the peanuts, as a main crop, is that when they are crushed for their oil, the residue is a meal very high in protein which could be used to fatten cattle.

They speak of varying it with sorghum and other fodder crops, and also of improving the pastures in the district.

Second, there is another project which would also provide the basis for raising fat cattle — this time in association with rice. Forty miles from Darwin a rice research station has been established to work on an area of about 1,000 sq. mi. of alluvial lands which are naturally flooded each year.

Once means have been found to control these shallow seasonal floods, the scientists say, a suitable variety of rice can be found, mechanized methods of farming can be developed and this might become one of the richest rice-exporting regions in the world.

The third promising project is to develop intensive agriculture based on irrigation from the heavy seasonal rains in the Kimberley mountain ranges.

An experimental station on the Ord River, where the first diversion dam is to be built, has definitely established, says CSIRO, that there is a basis for intensified development through irrigation.

The first Ord River dam will divert, rather than store, the seasonal rains so as to irrigate between 10,000 acres and 20,000 acres. On them, the scientists confidently say, it will be possible to raise sugar-cane, rice and safflower (carthamus tinctorius, a plant rather like a thistle which produces a red dye).

With equal hope but, so far, less proof, they believe cotton, linseed and soya beans could be raised in this area.

Soils which might be susceptible to similar treatment are estimated to cover some 500,000 acres.

Is this all rather like farming in the Mackenzie River valley, or growing vegetables in Dawson City, Yukon, or keeping a dairy herd in Yellowknife?

To some extent it may be.

The possibility of doing all these things in the Canadian North has long been proclaimed by the scientists (Science Service of the Department of Agriculture, mainly).

What is more, all these things have been done commercially — at least for a time.

Three local farmers were reported recently to have established a dairy in Darwin, N.T. They sell their milk cooperatively to shops. They are bringing in a pasteurization plant and a bottling plant. But they haven't enough milk for a door-to-door service.

There is, however, one imponderable difference between Northern Australia and the similar plans for development of Northern Canada.

It is the Australian consciousness of its Asian neighbors.

The "White Australia" policy brings up memories — of phony immigration tests and such like — which no Australian is proud of. But a "White Australia" policy is still in effect.

It is being dented, perhaps, by the ready acceptance of Asian students and trainees under the Colombo Plan. More and more responsible civic groups seem to be favoring a limited quota of Asian immigration, following a similar plan to the Canadian quota for immigrants from India, Pakistan and Ceylon.

But it remains a matter of debate whether such a system would ever be accepted or, if it were, whether it would do any good.

Australia, therefore, remains fundamentally anxious about "The Empty North".

It doesn't want to be told that the White Australians can't do anything with their North and won't admit the Asian people who could do something with it.

Whether any nation of Asia would, in fact, want to try to settle Northern Australia and grow peanuts, remains doubtful. But Australians may be capable of making extraordinary exertions to settle it themselves, so that no one can call them dogs-in-the-manger.

Economic Growth Has Been Rapid

By HON. HAROLD HOLT
Treasurer of the Commonwealth of Australia

HOLT

Australian economic development since World War II has been rapid and almost uninterrupted.

There was a check to expansion in the early 1950s, when export prices collapsed after the Korean War boom. But even on that occasion such decreases in output and employment as occurred were confined to a few trades and recovery was well under way by early 1953.

More recently, we came through the world-wide recession of 1958 with no more than a slowing down of the rate of expansion, despite a fall in export prices of 24% between 1956-57 and 1958-59.

The number in receipt of unemployment benefit had at no point exceeded 0.8% of the work force and at present is down to 0.6% of the work force, or about 25,000 people.

The pace of expansion has quickened this year in practically every sector of the economy.

The magnitude of postwar expansion can be judged from the increases in output of basic materials and power.

Over the past 10 years, production of steel has increased 171%, black coal 37%, brown coal 77%, electricity 133% and cement 142%.

Items of production virtually newly established since the war include motor vehicles, tinplate, diesel locomotives, and heavy earthmoving equipment.

With all this rapid expansion of manufacturing, the rural industries have not stood still. Farm production in 1958/59 was 35% greater than 10 years earlier, though there has been little change in the rural work-force.

Farm mechanization, the spread of the rabbit-killing virus myxamatosis, the application of mineral trace elements to remedy soil deficiencies, and the rapid increase of sown pastures have been some of the factors responsible for the increase in rural production.

The story of minerals is also one of rapid expansion. Output has increased more than 50% in 10 years and developmental work is proceeding on several projects of major importance for Australia's economic future.

A dominant feature of Australia's postwar development has been the rapid increase in population. Not only have we had a very high birth rate, yielding a rate of natural

(Continued on page 52)

When the president of the New York Stock Exchange, Mr. Keith Funston, visited Australia some weeks ago, this is what he said — "Few countries offer so much encouragement to foreign investors as Australia". *He continued,* "It is clear that . . . private enterprise will be relied on for much of the job to be done". *Australia is forging ahead. The nation's population has doubled since 1919. In industry, agriculture, mining, building, scientific research — in every sphere of activity to which a nation devotes its energies — there is a vast future, offering unlimited opportunities for capital investment.*

PEG A STAKE IN AUSTRALIA

The comprehensive and up-to-date booklet, "Peg a Stake in Australia", published by the E.S.&A. Bank, offers helpful information for those considering opportunities for investment in Australia.

In photo and story — by graphs and statistics — it puts before you the exciting story of Australia's colossal potential.

The preparation of this booklet is backed by knowledge acquired through 107 years of trading, and intensive study of Australia's economy.

We welcome your request for a copy of the booklet. Write to —

"No investment opportunities surpass those offering in Australia . . ."

— Gerard Noall, Chairman, The Stock Exchange of Melbourne

For the long-term investor, Australia offers a nearly-faultless combination of conditions. Vast natural resources are being developed. There is a dynamic growth of industry. Every facility of the modern money market is available, and there are established traditions of service in sharebroking and underwriting. Melbourne is the acknowledged financial centre of this vital Australian market. Turnover on The Stock Exchange of Melbourne is increasing constantly, while underwritings by Member Firms include major issues throughout the country. In particular, Member Firms are well-versed in the special needs of overseas investors.

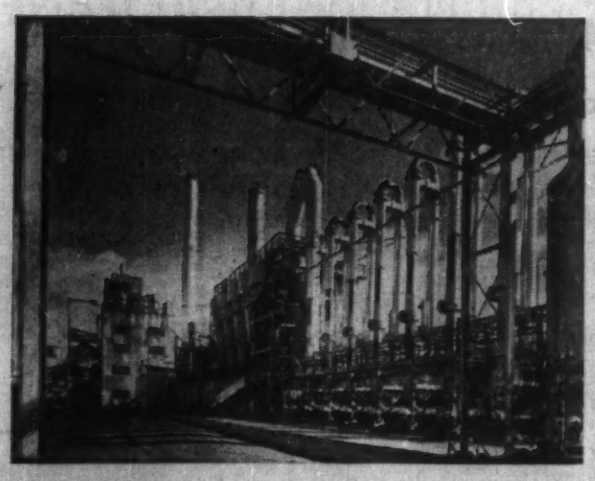
Companies and capital from the world's democracies are moving into Australia

Accelerating Australia's industrial expansion is the steadily increasing flow of private capital investment from overseas. During the last decade, American and Canadian investment totalled some $500million while annual inflow increased fourfold; British investment totalled more than $1100million with annual inflow now nearly double that of ten years ago; European investment—almost negligible in 1948—totalled some $125million for the same period. In assessing Australia's future, many of these overseas investors have been quick to evaluate Australia's proximity to the expanding markets of South-East Asia.

The quickening pace of Australia's growth

One of Australia's leading steelworks where 1,300,000 tons of high-grade steel is produced annually.



A new $4½million carbon black plant at Altona, near Melbourne.

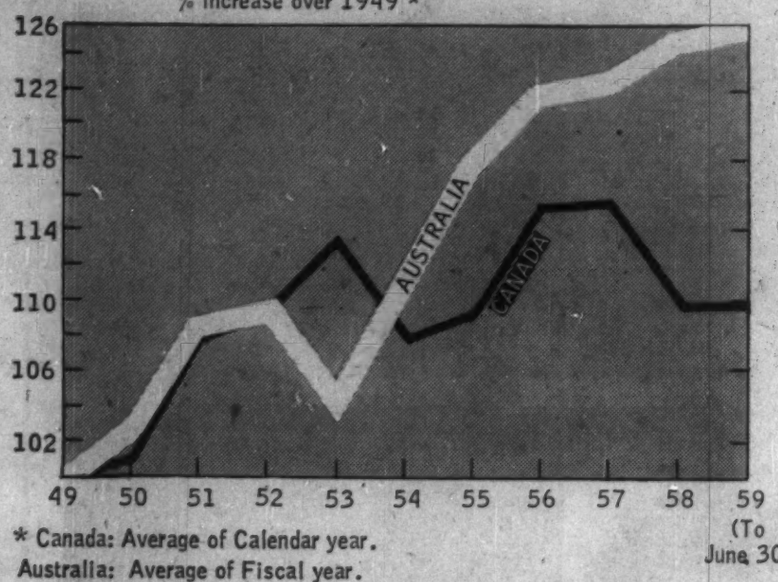
Construction work on one of three huge concrete dams in the $848million Snowy Mountains scheme.

Like Canada, in the last decade Australia's economy has expanded, developed and reshaped itself at an unprecedented rate. Today, Australia is in the midst of the greatest forward move she has ever known. Her population is growing at one of the fastest sustained rates in the world—bold migration planning has already placed one person in eight as a New Australian. Large-scale opening up of new natural resources is forcing a re-estimate of Australia's economic potential: a newly-discovered bauxite field equals the world's largest known deposits; the Snowy Mountains Scheme—an engineering project ranking with the St. Laurence Seaway—will generate about 3 million kW through 11 power stations while feeding irrigation waters to 1,000 sq. miles of new farmland. Development work now in hand at Victoria's 22,000 million-ton brown coal field will soon make it one of the world's major fuel and power production centres.

Australia welcomes Canadian participation in her development. The Federal Government's representatives in Canada will gladly supply information about trade, investment or migration. They are located at the Australian Trade Commission offices in Montreal and Vancouver.

THE ECONOMY

Manufacturing Growth



Productivity

Huge Growth Increase

BY C. D. KEMP
Director, Institute of Public Affairs

Perhaps nothing is more indicative of the vigor of the Australian economy than the growth of production in recent years.

Ten years ago key industries such as iron and steel appeared almost to be stagnating by North American and European standards.

The picture is very different today.

With the exception of West Germany, the annual growth rate of Australia during the last five years in basic industries such as steel, cement and power is probably without parallel.

Example: Since 1953, the quantity of electric power generated in Australia has grown by 58%, in Canada by 48%, U.S. 41%, West Germany 54%, U.K. 50% and Sweden 36%.

Although an official index is not available, private estimates suggest that Australian factory production has risen by over 30% in the last five or six years.

Comparable percentage increases for other countries between 1953 and 1958 are given by the United Nations as follows:

Canada, 13%; U.S., 7%; West Germany, 54%; Sweden, 18%; U.K., 16%. (Figures for Canada and the U.S. are for 1957 as the North American countries' production dropped in 1958.)

Large-scale manufacturing of course is of much more recent growth in Australia than in North America.

Since the domestic market is of very limited size, productivity in many industries is inevitably below U.S. standards.

Another big factor in the difference between North American and Australian productivity levels is that North America has much more mechanical and electrical power per worker.

In recent years, however, Australian productivity has been increasing rapidly with the growing application of mechanization and modern productive techniques, some of North American origin.

About 900 U.S. companies now have links with Australian industry, either directly through equity investment, or indirectly through manufacturing licensing agreements and patent rights.

Altogether almost $500 million of private overseas capital has been invested in Australia by North American interests during the last 10 years.

Economies of larger scale output in a growing market, improved managerial and labor skills and better industrial relations are also playing their part in bringing about higher productivity. Australia's strike record over the past 10 years is little worse than Canada's and over the last five years even better.

Cotton textiles, synthetic woven fabrics, hosiery, cement, soap, fertilizers and flour milling are more highly mechanized in Canada than Australia and output per head is therefore higher.

But in iron and steel, stoves, paints, footwear and tobacco, baking, beer and butter, Canada would seem to have little or no superiority, because in these fields Australia is abreast in mechanization.

Although over-all manufacturing output per man-hour may not yet measure up to North American, the Australian economy is greatly helped by the fact that output per worker in the rural industries is twice as great.

The larger number of small farms in North America and the rigors of the Canadian winter contribute to this difference.

Australian production costs for wool, meat, grains and other farm products are lower than in Canada and the U.S.

Lower wage rates would also enable many Australian manufacturing industries to compete with their Canadian counterparts although the Canadians may have higher productivity.

Australia's cost advantage is particularly important for engineering, machinery and allied industries seeking to get a foothold in Asian and Far Eastern markets.

Volunteers

The Institute of Public Affairs, Victoria, is a volunteer outfit supported by businessmen. It was formed in 1943, primarily to combat socialist and communist thinking and to clarify the place of private business in the community.

Unlike many similar organizations it decided in its early years to steer clear of political propaganda and open appeals to public opinion. Instead it devoted itself to examining and explaining some of the basic and vital questions of economic policy. It pioneered the study of productivity in Australia, and undoubtedly cleared the way for the present lively growth of "productivity-consciousness."

Prime Minister Menzies paid tribute to "the admirable objective quality" of its work, which, he said, "is clearly the result of much hard thinking and the careful collation of hard facts."

"On the documentary side of political economy," said Mr. Menzies, "no better work has been done during my parliamentary life."

Principal publications are: "I.P.A. Review", a quarterly, and a more popular booklet called "Facts" which circulates among key employees in offices and factories. Circulation is now about 17,000 for the Review, and about 50,000 for Facts.

No such Thing As Monopoly

By E. L. WHEELWRIGHT
Senior lecturer in economics, University of Sydney

Newcomers are often surprised at the lack of public concern about monopolies in Australia.

Few people know whether antimonopoly legislation exists.

Some say it is easier to find laws favoring monopolistic associations.

Even academic economists are not interested. The last book on the subject was published 40 years ago, and apart from isolated case studies, there has not been even an article on the subject since.

Legislation does exist, but it is a dead letter. The Australian Industries Preservation Act was passed in 1906, and seems to have been aimed primarily at preventing overseas competition through dumping.

Only half the Act is taken up with antimonopoly clauses, which were modeled on the Sherman Act, with one important difference.

The offence in the Australian Act is to restrain trade or attempt to monopolize with intent to cause detriment to the public.

The meaning of this phrase was not specified in the Act. It was interpreted by the judges in the only attempt at prosecution, known as the Adelaide Steamship Case (1911-13).

Briefly, this concerned an association of coal and ship owners, which fixed prices, controlled output, and regulated distribution.

Initially the judge interpreted the key phrase to mean "whatever was to the public loss, or put the public in a worse position with reference to higher prices, lower quality, or restriction of choice." He found that the cartel had this effect, and fined the participants.

On appeal to a higher court, this judgment was reversed, the conviction quashed, and the fines set aside.

This reversal was confirmed by the privy council in 1913. The grounds were that no intent to cause detriment to the public had been proved, and that the term "public" meant proprietors and workers, as well as consumers.

Since then no case has been brought under the Act, nor has there been any serious attempt to alter the legislation.

A similar fate befell the only comparable state act, the New South Wales Monopolies Act (1923). Curiously it was modeled on the Commonwealth Act, in spite of the 1913 fiasco.

No prosecution occurred until 1940. In that year an investigation by the State Industrial Commission revealed a price and production cartel in the manufacture of bricks, and a substantial increase in prices.

The prosecution inevitably failed because of the same judicial interpretation of the "intent" clause.

Since World War II the only major enquiry in N.S.W. has been into a timber cartel. It was stated by the state's Labor government on request of one of the firms which was having a dispute with the "ring."

An exhaustive enquiry con-

(Continued on page 53)

Rapid Growth

(CONTINUED FROM P. 50)

increase of about 1.4% per annum, but in addition a vigorous policy of assisted immigration has been pursued. This addition to population has been achieved along with a rising standard of living.

Of course expansion is not without its problems.

The demand for goods and services of every kind, and particularly capital equipment, has put pressure on our ability to finance the volume of imports demanded.

Australia's export earnings are still very dependent on the course of prices and the extent of market opportunities overseas for foodstuffs and raw materials. Nevertheless our external reserves have been maintained at a reasonably satisfactory level and this year important steps have been taken to ease the severity of import licensing and to abandon a large measure of the discrimination formerly exercised against North American goods.

The other major problem in the Australian economy in recent years has been to prevent the forces of expansion pushing us into inflation.

Most of the production bottle-necks that proved so troublesome in the early post-war years have been overcome and expanding industries are not now inhibited by shortages of power, raw materials or equipment. But expansion at the rate being sustained in Australia calls for a very high level of investment and it has not always been easy to generate domestic savings at a corresponding rate.

The government has therefore welcomed overseas investment, particularly where it is of a kind likely to help in the balanced development of Australia's resources.

The inflow of capital from abroad, most of it invested in the private sector but augmented by governmental borrowing where this has been possible on reasonable terms and conditions, has been an important supplement to our own savings.

Notwithstanding the problems connected with the balance of payments and the control of inflation, the pace of expansion has been maintained in Australia.

Good industrial relations and a high degree of political stability have been important contributory factors. I think it is fair to claim, too, that government economic policy has played an important role in maintaining conditions conducive to expansion and in successfully coping with the economic problems that inevitably arise from time to time. There is every reason to believe that the decade ahead will see as healthy a record as that of the past.

AUSTRALIA THE LAND OF THE FUTURE

SUNNY AUSTRALIA BECKONS YOU!!!

The Future is With Australia

Australian industrial expansion, aided in post-war years by enormous investment from other countries (mainly United Kingdom and the United States of America) gains momentum each year. Canadian investors cannot afford to miss out on a wonderful opportunity.

THE VICTORIAN CHAMBER OF MANUFACTURES

Canadian Capital is Welcome in Australia

The Victorian Chamber of Manufactures—the largest employers' association in the Southern Hemisphere—is a non-profit organization consisting of 7,000 member factories, and offers its services free to Canadian industrialists who may be considering investing capital in Australia.

The Chamber, with its staff of specialists, is available to give any Canadian industrialist advice about this great continent which is experiencing tremendous expansion and development.

For further particulars write:—

Noel Curphey, General Manager,
The Victorian Chamber of Manufactures,
312 Flinders Street,
Melbourne, Australia.

Economy Expands

Investments Broaden

SIR DOUGLAS COPLAND
Former Australian High Commissioner in Canada

In the past five years Australia seems to have entered upon a period of expansion in the grand manner—with the risks that inevitably accompany a policy designed to build rapidly for the future.

It would be idle to pretend that there have not been some blemishes in the record, particularly in the persistence of a housing lag, and the continued pressure on education facilities.

More than two thirds of the increase in the work force since the war is due to immigration. The change in public attitude to the total intake of people from abroad, and to the desirability of maintaining a high flow of non-British, has made a significant contribution to the expansion of the Australian economy.

In the next decade, or a little more, the prospect for growth of numbers is favorable. But the changes brought by the altering age distribution will have an important impact on the economy.

The age group 14-19 will increase by about two thirds. This involves greater provision for education and technical training, not only because of the growing numbers, but also because of the need to train a greater proportion of people in a technological age.

The age group 20-24 will increase by approximately 50%, and this will involve a still greater demand for houses to meet the rising marriage rate.

The work force will rise by from 25% to 30%.

Thus there is in prospect increased demand for investment in educational facilities and housing and all that goes with it. At the same time the rising work force will help to provide the needed labor supply.

This is only one facet of the broader problem of expansion.

The Australian economy is now expanding on broad fronts, in both the public and the private sector. Investment represents a high proportion of national income, and about 30% of total investment is in the public sector for fuel and power, water and irrigation, roads and other facilities.

All of this is essential to an expanding economy; indeed it may be that the proportion of public to private investment should be stepped up in order to cope with the essential needs of education, fuel and power and transport.

One of the interesting features of the recent development of public investment is the high proportion of funds provided from current income.

In the 10 years 1948-49 to 1957-58, the total expenditure by public authorities for capital development was £3,599 million. But the increase in their net indebtedness was only £797 million, or a little more than 22% of total expenditure. This outmatches the provision made by private enterprise through depreciation allowances and ploughed-back profits.

In the private sector the proportion of total capital from these sources was 45%.

One reason for the relatively large sums available for financing public works from revenue is the incidence of the uniform tax by the federal government, and the yield of special sales taxes imposed to counteract the inflationary influence of the 1951-52 boom.

Consciously, or otherwise, Australia may be said to have a positive fiscal policy that ensures a high rate of public investment, and at the same time operates to promote balance between expenditure on capital goods and consumption goods.

Not sufficient attention has been given to this aspect of basic policy either inside Australia or abroad.

To highlight it as a virtue might intensify the clamor for lower taxation in the all too common belief that the individual will always spend his income to better advantage for the community than a government will.

It brings to the front once more the adage that the taxpayer should be more concerned with what is done with the money he pays in taxes than with a clamor to have taxes lowered as the chief maximum of fiscal policy.

Private business is expanding in many fields of primary and secondary industry, and the economy as a whole is becoming more broadly based than ever before.

In the rural industries greater attention is being given to modern technology of pasture improvement and animal husbandry, and in the conservation of fodder and water.

Advances in this field had much to do with Australia's ability to meet the recent fall in prices of primary products, especially wool, without undue contraction of essential spending.

Steel production has almost trebled since before the war, and the **Broken Hill Proprietary Co.** has plans for continuous expansion.

Australia produces the cheapest steel in the world, thanks partly to the high mineral content of the ore; and most of it is still consumed locally, a fact that reflects the rate of expansion.

Great advances have been made in automobile construction; in chemicals, plastics and fertilizers; in the light industries producing household goods; in textiles, especially fine quality woollen goods; in farm machinery, and other goods for which the prospect of expansion offers a growing market.

With the adoption of import licensing after the war and the maintenance of tariffs, it may be that some of these industries are not as low-cost producers as could be desired. But the over-all picture in secondary industry is one of rapid growth with the prospect of its continuance in the next decade.

Not the least exciting development has been in the mineral field, especially uranium and copper, and the recently discovered very extensive deposit of bauxite on Cape York Peninsula in the far north of Queensland.

New and improved towns are being established in the "outback" on the pattern pioneered by the mining companies in Broken Hill.

Australia has been receiving much more attention from the overseas investor in the last five years, and foreign investment shows a tendency to rise. It should be considered in association with the highly developed techniques of overseas companies. These can contribute so much to the problems of a young country.

The picture of development, the increase in the output since the war can be summed up by saying that output has increased in primary industry by 40% to 50% in manufacturing over 80%, and in fuel and power over 100%.

Active steps have been taken by the Department of Trade to promote exports in new markets. The proportion of Australian exports going to the U. K. market fell from 49% in 1938-39 to 27% in 1957-58. Fortunately, there have been opportunities in other markets, notably in Europe and the Far East, and to a less extent in North America.

With the growth of population and the prospect for development, these markets seem likely to offer better prospects than some of the traditional markets.

Australia is increasingly aware of the need to seek markets where economic growth is taking place. Her main commodities of export are likely to be in increasing demand in such markets.

In all the circumstances, internal and external, the situation is set fair for a decade of expansion in Australia.

What is a Monopoly?

(CONTINUED FROM P. 52)

firmed the existence of such practices as exclusive dealing through the possession of import licenses. But there was no prosecution, for obvious reasons. The report lies quietly in its pigeon hole.

Some of the other states have legislation: but it is equally ineffective. Queensland, for example, had a case in 1941, brought under its Profiteering Prevention Act. This was a test case on whether resale price maintenance was legal. It was.

The only revival of interest was in Western Australia where the recent Labor government passed a stiff act: its successor is repealing it.

States have the power to impose price control, but it has rarely been used effectively, since the disappearance of postwar shortages.

With legislation ineffective and the public apathetic, trade associations flourish. Their extent cannot be documented, but the trade journals show they are widespread.

Occasionally some internal squabble is publicly ventilated, usually in an overstocked market, in the retail trade.

One such occurred earlier this year, over the credit terms on which television sets could be sold.

After a bout of indiscreet publicity, which revealed some boycotting of big stores by manufacturers, all was smoothed over.

As in Canada, some of these arrangements are integrated into a public cartel, controlled by governments.

In N. S. W. for instance, the Milk Board operates a price, production and regional cartel. It reaches right down to the retail level. The local milk round is operated on a regional quota basis, and it changes hands for a capital sum based on the gallonage involved.

A variety of such boards exists in primary industry, sometimes with state government participation (e.g: N.S.W. Milk and Egg Boards), sometimes on a voluntary producer basis with state approval.

From time to time difficulties occur, which are usually traceable to the difficulty of controlling entry into the industry.

Best example on a nation wide scale is the sugar industry, tightly organized around the dominant company.

Another example, on a different scale, is the copper industry, which mysteriously manages to keep up the Australian price of copper, when the overseas price falls, although here there is no government participation.

Trading Banks

Eight major trading banks' figures for August, 1959

		(£A '000)
Deposits—Not bearing interest		1,155,513
Bearing interest		458,082
		£1,613,595
Cash (including cash with Central Bank)		64,235
Commonwealth and state government securities:		
Treasury bills		28,875
Other		275,662
		304,537
Loans, advances and bills discounted		933,594
Special account with Central Bank		249,553
All other assets (including funds with authorized dealers in the short-term money market)		137,536
Percentage to deposits:		
Liquid items and government securities		22.9
Special accounts with Central Bank		15.5
Advances		57.9
Full branches and sub-offices:	Over 3,300	
All other cheque paying banks		
Deposits:	£A.67 million	
Advances:	£A.70 million	

Practical Banking

H. G. ENSTEN
Chairman, Australian Bankers' Association

There are many points of similarity between the Australian trading banks and the chartered banks of Canada due to origin and the somewhat parallel development of the national economies in which they operate.

However, there are some important differences, particularly with regard to the practical side of banking.

The major Australian trading banks comprise seven free-enterprise and one government-owned bank. With one exception they have an Australia-wide network of branches, and all are engaged in active competition, one with the other.

The free-enterprise banks are public companies, two of which are incorporated in the U. K. All operate under licenses from the federal government.

The licenses, however, do not come up for renewal, but are of a continuing nature.

The origins of the banks stretch back well into last century and their present structure is a result of a series of amalgamations similar to that which preceded the present-day Canadian chartered banks.

All the free enterprise banks are members of the Australian Bankers' Association. This organization comprises the seven general managers and its function is to examine ethical standards and practices in the banking field.

The chairman is elected annually and is the voice of the banks in their relationships with both Central Bank and government authorities.

Australia, like Canada, derives a great deal of strength from the export of primary

AUSTRALIA'S RAPID DEVELOPMENT offers a Golden Investment Opportunity

With a population increase of more than 2 per cent every year, Australia is now about to stage one of the most spectacular industrial revolutions of all time.

Here are some indications of the phenomenal growth of Australia's population and industries during recent years:

★ POPULATION INCREASED 26% in 10 years
★ INDUSTRIAL PLANTS INCREASED 80% since 1939
★ FACTORY WORKERS INCREASED 95% since 1939

The opportunities for the investment of capital from Canada are unlimited. Already, since World War II, many overseas firms have invested technology or capital in Australia's expansion, with excellent results.

AN EXCEPTIONAL INVESTMENT SERVICE

To those interested in capitalizing on Australia's progress, The Commercial Bank of Australia Limited is able to offer extensive and valuable information. With a complete coverage of Australasia through over 780 offices throughout Australia and New Zealand, The Commercial Bank is ideally equipped to provide the following services:

★ ARRANGE TRADE INTRODUCTIONS
★ SUPPLY INDUSTRIAL SURVEYS
★ SUPPLY UP-TO-DATE REPORTS ON THE AUSTRALIAN ECONOMY
★ PROVIDE SURVEYS OF POSSIBLE LOCATIONS OF INDUSTRIES
★ HANDLE ALL INTERNATIONAL PAYMENTS

ACT AS YOUR NOMINEE FOR PORTFOLIO INVESTMENT IN AUSTRALIA AND NEW ZEALAND.

Australia's Industry

Perhaps nothing is more indicative of the vigor of the Australian economy than the growth of production in recent years.

Ten years ago key industries such as iron and steel appeared almost to be stagnating by North American and European standards.

But today, with the exception of West Germany, the annual growth rate of Australia during the last five years in basic industries such as steel, cement and power is probably without parallel.

Foreign Capital

A Contrast in Views

By MICHAEL BARKWAY

CANBERRA (Staff)—Australians really want foreign capital.

You hear that on every side.

Yet official policy is extremely cautious about it—strikingly so in comparison with Canadian policy.

There is a world of difference between the talk I have heard on the one hand, from businessmen and financial houses and from most of the states' governments, and the views expressed, on the other hand, by the responsible people in the federal government.

The federal government and the Commonwealth Bank (soon to become The Reserve Bank of Australia), hold two basic and vital views.

They contrast sharply with the popular view here.

And they couldn't be more different from the policies Canada has followed.

In a nutshell, these official views are:

- **"Australia is already getting all the foreign capital it can use.** A greater inflow would only be inflationary."
- **"We have no intention of giving any promise** that foreign-owned capital can be repatriated at any time, whenever the owner wishes. We don't even want the sort of capital which requires such a guarantee."

Australia, thus, rejects the view which has inspired Canadian policy—that foreign capital must be free to come and go as it pleases or it won't come at all.

It also rejects the Canadian assumption that any and every inflow will be good for the receiving country.

The basis for both these views was explained to me by unquestioned authorities.

Here is a summary of what they said:

DIRECT INVESTMENT

"We warmly welcome foreign capital coming into Australia to set up new industries," I was told. "We appreciate the know-how it brings, the technical skills, and the production machinery which we couldn't otherwise get without a drain on our balance of payment.

"All this we want, and we will treat it fairly—at the least.

"But we have no interest in fly-by-nights or speculators."

This is the attitude behind the recently-confirmed decision never to promise that foreign capital can be repatriated at any time the owner may please.

"Suppose the balance of payments does go sour. Suppose the bottom falls out of wool prices. Suppose we have a catastrophic drought. In any such case, we want to keep the reins in our own hands.

"We want the foreign subsidiaries who establish here to throw in their lot with Australia.

"If we should run into temporary difficulties, let them ride them out with the rest of us."

This was the essence of the statement made by an unimpeachable authority.

The positive side of it is expressed in the message which Prime Minister Menzies wrote specially for this issue of **FP**.

"We will treat them fairly. We value our good name," he says in effect.

And that is the full extent of the commitment which this government will give to foreign investors.

The question arose before the Australian cabinet at a fairly recent meeting, when attention was drawn to the various efforts of the states and other institutions to attract foreign capital.

"Some of the things they are saying, some of the advertisements they are publishing, even, might seem to imply some sort of commitment by Australia," I was told.

"This was a little worrying to the federal cabinet, because the government doesn't want any sort of commitment—not even an implied one."

Nor, of course, does the Australian government want to discourage any foreign investor who has something to contribute to Australian development.

In this dilemma, the decision was reached "to spend a bit more money" so as to be able to provide any responsible business organization overseas with the very best factual material about Australian conditions.

I gather that some sort of machinery is being evolved now to ensure that any overseas organization interested in Australia can be given the very latest reports on the Australian economy.

"They must be up-to-date. They must be factual. They must be good," I was told. "They must include everything that needs to be known about the balance of payments. And they must have all the latest statements of government policy."

The facts must be available because there won't be any promises.

This is the view of the present government—a coalition of the Liberal and Country parties.

It is the only "free enterprise" coalition currently possible in Australian politics.

The only alternative is from the Labor side.

Mr. Menzies' coalition has been in power, now, for 10 years.

It is, perhaps time for the pendulum to swing.

But no Labor government is possible until the party can heal its divisions, find a new leader and a new appeal.

And, if Labor should come to power, what would it do for the foreign investor?

Its whole record in this matter has been more restrictive—not less.

One of its sympathizers said to me:

"If the party had been properly led, it could have thrown this government out on the strength of **General Motors'** record alone."

Labor's instinctive mistrust of foreign investors can best be compared with the old prairie distrust of "eastern bankers". It finds its roots in similar experiences of the 1930's.

When you look at the scale of foreign investment in Australia, compared with the proportions it has reached in Canada, the Australian caution may seem excessive.

You can find in business circles, as well as among officials and politicians, the same suspicions which appear even more prominently among the general public. Their observation of Canada has led them to believe that foreign control can sneak up on them, if they aren't careful. So they mean to be careful.

Commenting on the Commonwealth Statistician's latest report on foreign investment, the "Financial Review" said:

"There is little evidence here of that encouraging flow of North American money which has received so much publicity. In fact, when the remitted profits are compared with the undistributed profits and the inflow of 'new' money, the net American contribution to Australia's development in 1957-58 was microscopic."

The paper's Canberra correspondent added:

"On an investment of some $46 million at June 30, 1948 (estimated paid-up capital), North American companies earned, in 10 years, undistributed profits of $133 million and remitted home some $82 million, making a total return on the original stake of some 500%.

But these critical views do not mean that the foreign investor faces a hostile climate in Australia.

Strange as it may seem, the reverse is true.

It is true that Australia welcomes foreign investment—provided it is the kind of investment which genuinely adds to the country's resources and facilities.

DOMESTIC CAPITAL

"The fact is we are not short of capital."

This I was told in the highest quarters.

"We may be short in terms of what people would like to have," my informant added. "But we are not short if we are to keep our development on a stable footing."

The Australian rate of development is pretty high, he added." The reports in this **FP** Special Report will confirm it.

Experience shows that if the rate of development is pushed much further than the rate we have already attained, it becomes unstable.

"It leads to a boom and then to recession.

"The limitation on our development is not capital: it is manpower."

A Canadian, interpreting this Australian view in the light of Canadian experience, is bound to see it as a resolute determination not to get involved in the inflationary sort of boom which Canada suffered between 1955 and 1957.

"If the rate of development could be increased because Australians were saving more," said one financial authority, "that would be all right. The money saved would correspond to a saving in manpower. It would mean a reduced demand for production of goods or performance of services. Then the saved money and saved manpower could go into new capital investment together.

"But unless we give up some part of our current spending, I don't see how we can increase the pace of our development without running into instability, and inflation, and perhaps a balance of payments crisis."

What You Should Know About Trading Banks

(CONTINUED FROM P. 53)

produce and raw materials, although manufacturing is rapidly increasing in importance. The branch system of banking has proved in each case a positive aid to development.

Before World War II Australian industry looked to the trading banks for the bulk of its finance. Today the capital market increasingly supplies funds for company expansion whilst trading bank lending is generally restricted to the provision of working capital.

An exception is finance for home ownership.

Last year housing loans represented about 12.5% of total trading bank advances. Such loans are mostly short-term with longer term finance being provided by savings banks, life offices, building societies and other institutions.

Australian trading banks accept deposits both 'fixed' and 'on demand'. At present interest rates on the former range from 2¼% for three months to 3½% for two years or more.

Cheque facilities are available only on current accounts.

Trading bank charges for current accounts differ from Canadian practice in that a flat fee of £1 per year is charged for keeping the account, irrespective of the number of transactions made.

Advances by the trading banks are mostly by way of overdraft, although fixed loans are sometimes made. Interest rates on overdrafts are limited to a maximum of 6%, and the average on all advances must not exceed 5½%.

These rates result from an agreement between the private trading banks and the Commonwealth (central) Bank. The Central Bank has legal power to fix, and vary, the banks' maximum interest rates. They are not fixed by statute.

Three of the seven major free-enterprise banks conduct savings bank business. In addition there are a few savings banking companies, as well as a federal and some state governments' savings banks.

Top deposit rates for savings bank accounts are in the 3%-3¼% per annum range. With the exception of certain non-profit organizations cheque facilities are not available to savings bank depositors.

An important function of the major Australian trading banks is the provision of finance for overseas trade. Approximately 40% of Australia's exports go to the U.K. and the bulk of overseas trade is transacted in sterling.

Each trading bank has a London office and comprehensive agency arrangements in important financial centres throughout the world.

Australian trading banks arrange letters of credit and deal in the purchase and sale of foreign exchange, discounting bills and arranging payments by mail or telegraphic transfer.

In foreign exchange business the trading banks act as agents for the Central Bank, which has control of the exchange rate.

Australian trading banks provide a wide variety of ancillary services including safe custody facilities, trade information, comprehensive travel service and the like.

Since interest rates on both deposits and advances are fixed by the Central Bank these ancillary services play a large part in the competition between the banks for hard-core banking business.

The Central Bank exercises very real control over the Australian trading banks. In addition to power over interest rates the Central Bank has power to call up into a "special account" a substantial part of trading bank deposits which is then not available to the trading banks.

More than 15% of trading bank deposits are at present "frozen" in this special account and the Central Bank has power to call up almost as much again.

When new legislation, already passed by parliament, becomes operative in 1960, the (then) Reserve Bank will have limitless power to "call" deposits of the major banks into Statutory Reserve Deposit Account with itself.

As well as this there is an agreement between the Central Bank and the trading banks that the latter will at all times keep a certain minimum percentage of their deposits in liquid assets (cash, deposits with the Central Bank) and government securities combined.

These provisions give the Central Bank control over the total volume of trading bank advances, the actual spread of lending between the various classes of borrowers generally being left to the individual banks.

A feature of the Australian scene is the wide seasonal variation in the money supply resulting from such factors as the pattern of government finance, the wide variations in the flow of export proceeds and advances to primary producers financed by the Rural Credits Department of the Central Bank.

Banks tend to have very high liquidity in the period December-March and to lose much of this liquidity in the April-July period of each year.

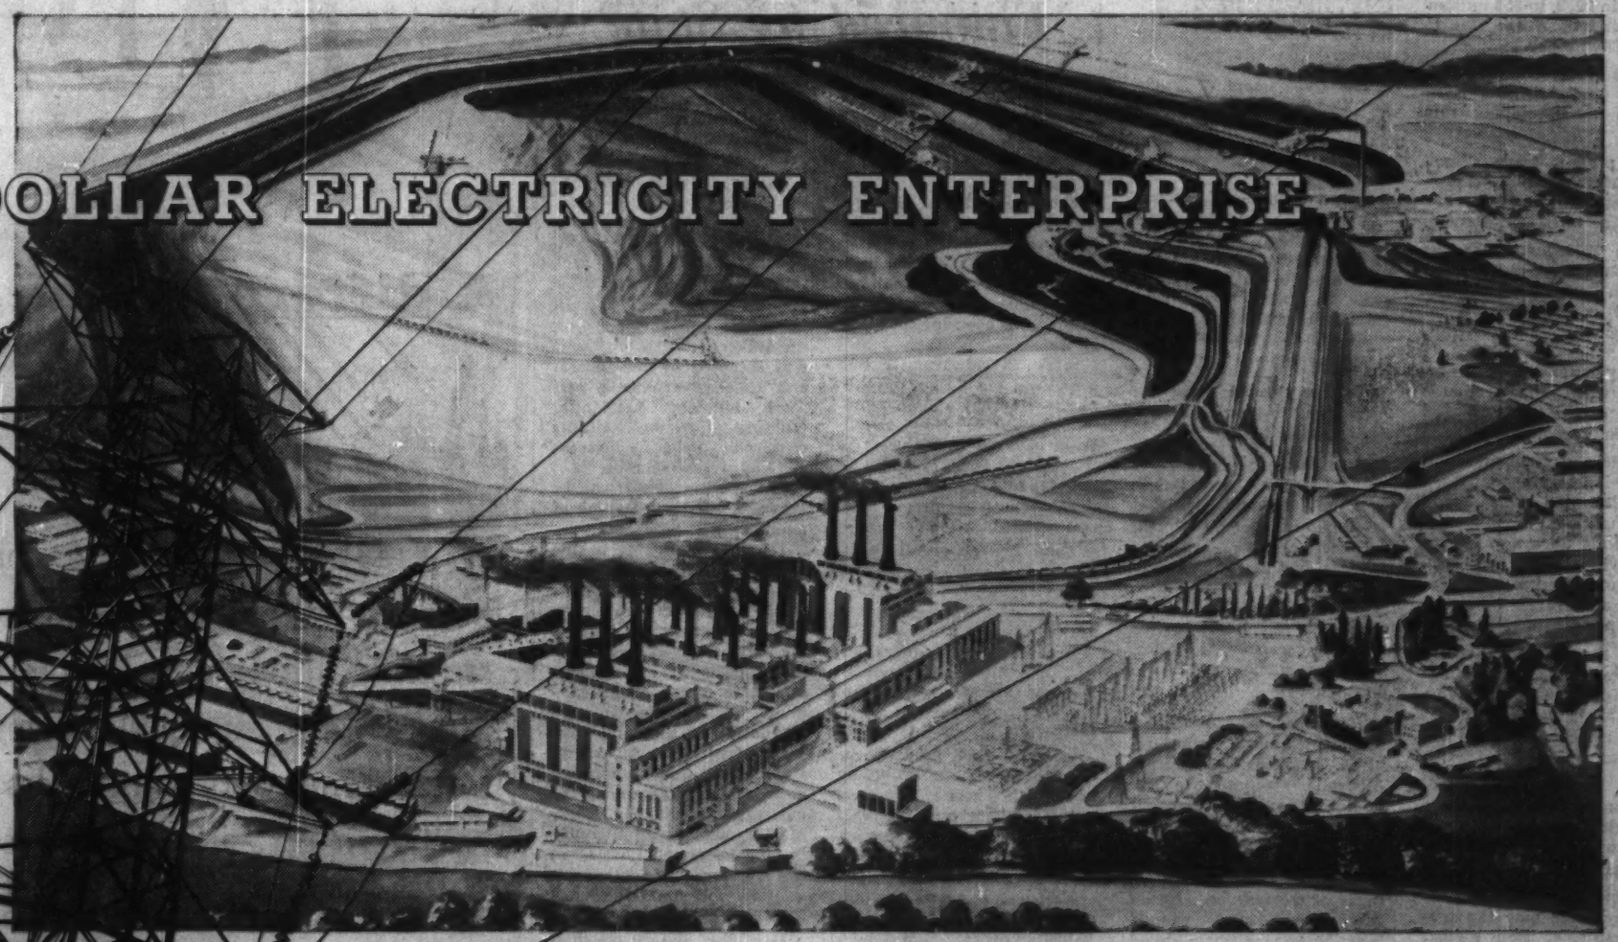
Efficient management of trading bank funds calls for a constant watch on these influences and a forward assessment of the magnitude of the seasonal movement.

Faced with Central Bank controls on the one hand and the emergence of new institutions on the other, the Australian trading banks have experienced a narrowing of their influence in the financial sphere.

They have reacted to this situation by widening their activities in other directions.

All the free-enterprise banks have purchased shares in hire-purchase companies, three of them have established savings banks, while some of them have recently entered the unit trust field.

A BILLION DOLLAR ELECTRICITY ENTERPRISE



Yallourn power station and brown coal open cut.

AUSTRALIA'S LARGEST ELECTRICITY AUTHORITY

The Commission ranks as one of Australia's largest public corporations. It owns more than $550,000,000 of capital assets, has an annual revenue of $110,000,000 and has more than 18,000 people employed.

The installed capacity of the Commission's generating system is nearly 1,300,000 kilowatts in 20 power stations. Production has trebled in the last 10 years, and is now about 5,500 million kilowatt-hours a year.

Two-thirds of Victoria's electricity production comes from steam power stations using brown coal or briquettes made from brown coal. Hydro-electric stations provide about 10% of the total supply.

The Commission's system supplies 830,000 consumers, and 30,000 new consumers a year are being connected to its distribution network.

The Commission is Australia's largest individual fuel producer. Output from its open cut mines on the vast brown coal deposits in the Latrobe Valley is now over 11 million tons a year, and will more than double in the next 10 years.

The Commission's new projects now under construction on the brown coal fields of the Latrobe Valley, located about 100 miles east of Melbourne, will make this region the greatest centre of power and fuel production in the Southern Hemisphere.

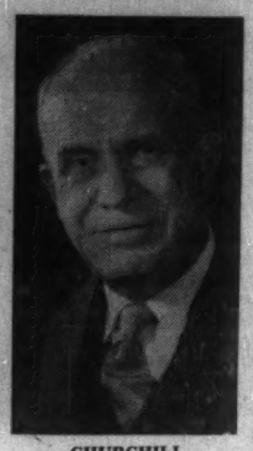
THE STATE ELECTRICITY COMMISSION OF VICTORIA is responsible for the generation and distribution of electricity throughout the most industrialised, the second most populous, and the fastest growing State in Australia. The Commission's operations are based on the development of some of the world's richest deposits of brown coal which, in the absence of good black coal, the State of Victoria is singularly fortunate to possess. This wealth of brown coal provides unlimited resources for the supply of electric power and solid fuel. More than half a billion dollars are already invested in this great public enterprise, and at least the same amount of new capital must be found over the next eight years to finance planned electricity expansion in this progressive community.

STATE ELECTRICITY COMMISSION OF VICTORIA

HEAD OFFICE, 22 WILLIAM STREET, MELBOURNE, AUSTRALIA.

'Seeking Healthy Trade Relations'

By
Hon. GORDON CHURCHILL
Canadian Minister of Trade and Commerce



CHURCHILL

I welcome this opportunity of contributing an article to the special supplement on Australia of The Financial Post.

It will undoubtedly do much to strengthen the economic relations between our two countries, and provide Canadians with a better understanding of the Commonwealth of Australia.

Canada and Australia have much in common. They are both rapidly developing countries, with similar economic systems. They have extensive and valuable natural resources, high levels of immigration and each possesses a large potential for further industrial growth.

Canada and Australia have a common outlook on international trade, and each country is seeking the establishment of stable and healthy world trading relations.

Canada and Australia have developed a large and valuable trade between themselves, which pre-dates Confederation in Canada.

In many ways, the natural resources of Canada and Australia are complementary. Where we supply canned salmon, Australia supplies sugar. Where we supply timber and metals, Australia supplies wool and essential oils.

Further, there is a large interchange of industrial materials, through which the resources of each are supplemented.

As the economies of the two countries expand and diversify further, a framework is created for new and important exchanges of semiprocessed materials and finished manufactures.

Total trade between Canada and Australia has grown substantially and steadily from $38,000 in 1868 to $43 million in 1939, to $58 million at the end of World War II and to $86 million in 1958.

Trade agreements between Canada and Australia have assisted in developing this trade.

The present trade agreement dates from 1931. It provides basically for the exchange of tariff preferences.

Since 1931 many changes have come about in the trade between Canada and Australia and in their commercial relations with other countries. These changes have been particularly extensive in recent years, when the economic growth of the two countries has been especially rapid.

In these circumstances, it became increasingly desirable to review the 1931 Trade Agreement with the objective of drawing up a new agreement which would take account of the new circumstances and provide for a further expansion of trade.

At the Commonwealth Trade and Economic Conference in Montreal in September, 1958, it was agreed that such a review should be undertaken.

The Deputy Minister of Trade and Commerce led a delegation last April to Canberra, where most useful discussions were held.

I hope to be able to announce before long the specific results of these discussions, which I am confident will provide a framework for a considerable long-term growth of trade.

Under the influence of the 1931 Trade Agreement there was, in the 1930s, a considerable growth in Canadian exports to Australia, particularly of manufactured goods.

During World War II there was a further substantial growth of Canadian exports to Australia.

Canada supplied a wide range of manufactured goods in order to provide articles which were no longer available in sufficient quantity from other sources. Defence shipments to Australia were also very large during the war.

Major changes have taken place in the composition and levels of trade in the postwar period.

In order to conserve its balance of payments, Australia imposed severe dollar import restrictions in the early postwar years. These resulted in a considerable reduction in our exports.

Since the restrictions bore particularly heavily on finished manufactured goods, Canadian exports tended to become more concentrated into the field of raw materials and industrial supplies.

In recent years, and particularly this year, there have been extensive liberalizations of restrictions by Australia.

In the most recent liberalization, Australia removed the special restrictions which have applied for many years against dollar goods except those applicable to motor vehicles and lumber.

As a result, Canadian exporters have now been placed on the same footing as exporters in all other countries. Further, Australia has provided for a higher level of imports from all sources. Opportunities for trade, which have not existed for more than a decade, are thus now opening up for Canadian exporters.

I particularly urge Canadian exporters to look into the new possibilities which have been created in Australia by these liberalization moves.

The Department of Trade and Commerce is ready and anxious to assist exporters in developing the Australian market.

As an example of what is being done to expand this important trade, Canada participated this year for the first time in the Sydney Industries Fair. Sixty-three Canadian companies joined with the department in this trade promotion effort.

Further specific plans are under way to promote Canadian exports to Australia.

Canadian exports to Australia amounted to $53 million in 1958 and consisted principally of canned salmon, sausage casings, synthetic textiles, lumber, pulp, newsprint, primary steel, office machinery, parts and components of motor vehicles for assembly, metals, asbestos, synthetic rubber and basic chemicals.

There has been a growth in Canadian imports from Australia. In 1958 imports from Australia amounted to $33 million. They have increased substantially in 1959.

The products which have contributed to this growth are sugar, cocoanut oil, frozen beef, frozen lamb, canned beef, sausage casings, hand tools and ships.

Australia is also actively engaged in increasing trade with Canada and has announced that a trade mission will visit Canada in April and May next year as a follow-up to a similar mission which visited the western parts of Canada and the U. S. earlier this year.

Canadians can look to a considerable growth in trade between Canada and Australia. Although the trading pattern will probably change quite extensively in coming years, there is a sound framework within which new trading opportunities can develop. I am confident that trade between Canada and Australia will play an increasingly important role in contributing to the economic growth and prosperity of our two Commonwealth countries.

Tribunals Cut Wage Strife

Businessmen from abroad are always fascinated by the Australian system of fixing wages and industrial disputes by arbitration courts or boards.

It may not remove all possibility of collective bargaining, but it certainly cuts out the major part of it; and it prevents the sort of deadlock that the U. S. steel industry finds itself in.

Some elements in the trade unions are growing increasingly uneasy with it. They don't want to abandon it, but they want more chances of using their power in collective bargaining as well.

On the employers' side, there is very general preference for the Australian system rather than the North American way of collective bargaining.

In the case of employers, however, if an employers' organization is a party to the dispute, all of its members are automatically bound by the award.

On the other side, the employees of an employer who is bound would, in practice, get the benefit of an award even though not members of the union which is a party but they themselves could not take legal action to invoke those benefits.

This limitation of the application of federal awards to parties is probably the chief distinction between federal and state awards.

At present, approximately 45% of all male workers and 37% of all female workers are covered by Commonwealth awards, whilst state awards cover 45% and 55% respectively. The remaining 10% and 8% respectively fall outside the coverage of awards.

The Australian wage structure, put broadly, has two major elements: The basic and the marginal wage.

The wage is now fixed annually, on the basis of its being the maximum the economy can sustain.

Each state has its own basic wage determined normally by the state industrial tribunal for the purposes of state awards.

Superimposed on the basic wage is a "margin". This is the extra amount that is awarded for features attached to particular work, such as a skill or experience required for its performance, its laborious nature or some other disability attaching to its performance.

Women's wages comprise a basic wage equivalent to 75% (67% in Western Australia and 65% in Queensland State Awards) of the male rate, and a margin determined on the principles already mentioned.

Australia's record in respect of time lost through industrial disputes compares favorably with most other industrialized communities.

As with other countries, the coal mining industry has been the source of the greatest number of industrial disputes and the greatest loss in working time.

The stevedoring (longshoremen's) industry has also experienced considerable unrest.

Despite a decided improvement in both industries over the last few years these two industries between them have since 1951 accounted for one half of the man days lost in Australian industry as a whole, except in 1952 and 1955 when the percentage was a little under 40.

If the coal mining and stevedoring industries are excluded, the average loss of working time, through industrial disputes, of the Australian worker is, without doubt, extremely low. From 1951 to 1958 it amounted to an average loss of 0.162 working days per annum or slightly more than 1.29 hours per annum.

All Universities Financed by State

By SIR GEORGE PATON
University of Melbourne

Under the Commonwealth constitution education is the responsibility of the six states.

The University of Sydney was founded in 1850, Melbourne in 1853, Adelaide and Tasmania followed in 1874 and 1890 respectively, and by this century there was a university in each of the six states.

Since World War II the growth of population has led to the creation of two more universities in New South Wales and one in Victoria.

In the federal capital the Australian National University has been created — this raises the total to 10.

There are no private universities — each relies on the governmental treasuries for the substantial part of its resources.

Except for the Australian National University which has no undergraduates, the universities follow the usual British pattern.

In many ways Australia is following the same evolution as Canada. There is the same problem of the bulge caused, not only by the increased postwar birth rate, but also by immigration.

Melbourne and Sydney now have each more than 10,000 students.

The rapid increase in student numbers (in the case of some of the universities over 10% per annum for the last three years) has put a serious strain on university staff and on the available accommodation. Since World War II the problem of securing the necessary revenues, erecting the necessary buildings and tempting the required staff has become the major preoccupation of vice-chancellors and heads of departments.

Although constitutionally education is a function of the states, the federal government has command of more resources. Since 1951 it has helped substantially under a formula which prevents the states from reducing their commitments because of increased federal aid.

All the universities accept federal help. An able committee was set up by the federal government in 1957 to enquire into the needs of universities, the chairman being Sir Keith Murray of the University Grants Committee in the U. K.

The report of the committee stated in forcible terms the needs of the universities and dealt sympathetically with their problems of structure and administration.

This report resulted in an immediate improvement in the university situation, for it was accepted by the federal and state governments, and there followed substantial building allocations. Grants were also made to increase staff and raise salaries.

The Murray Report can be regarded as the beginning of a new era.

The community is beginning to realize that progress is impossible without an efficient university structure. This is shown by the increasing support given to university appeals by all sections. But there is not yet an adequate appreciation of the magnitude of the total cost.

A permanent Australian Universities Commission has now been created under the chairmanship of Sir Leslie Martin, who was previously the Professor of Physics at the University of Melbourne. Its task will not be an easy one.

It is only fair to say that there has been great expansion both in buildings and staff over the last decade. The tragedy is that student numbers have increased faster than university revenues.

One logical answer to this problem is to limit student entry. This practice will be followed by Melbourne in nearly every faculty in 1960.

But Australia is, like Canada, a community with a spectacular rate of development. This inevitably creates a shortage of trained minds in almost every sphere, so the policy of the universities has been to take every student they could.

This raises two problems:

- **It is not easy** to retain standards in the face of serious overcrowding;
- **The effort necessary** to deal with this problem tends to subtract both energy and money from the research program.

A different land . . .

with your kind of people

It is a land of striking contrasts: Surfing on world-famous beaches . . . exploring the marvels of the Great Barrier Reef . . . strolling through the haunts of the koala, the platypus, the kangaroo, wild life uniquely Australian. You shop and go sightseeing in great metropolitan centers . . . thrill to the finest in horse racing . . . "live it up" at a smart resort on Australia's gay Gold Coast.

Plan a trip now and let your Travel Agent make the arrangements. Write us for literature and full details.

'Increase Variety Of Export Goods'

By Rt. Hon. JOHN McEWEN
Australian Deputy Prime Minister and Minister for Trade

McEWEN

There is a long history of close and cordial trade relations between Australia and Canada.

The first trade discussions between our two countries were held in 1905, only four years after Queen Victoria signed the Proclamation of Commonwealth which brought the Commonwealth into being.

The formal trade agreement we concluded in 1925 was among the first negotiated by Australia on its own behalf.

This early trade agreement has been superseded but the principle of reciprocal preferential tariff treatment between the two countries then established has been maintained to the present day.

I feel it has made an important contribution to the development of trade between our two countries.

Australia favors a multilateral trading policy with a minimum of government interference with the trading community.

At the same time we strongly support co-operation between governments to ensure stability and predictability in international trade in basic bulk commodities and fair trading practices.

As Canadian thinking is along similar lines, it is not surprising that both countries have played an active part in international moves to foster a multilateral and orderly development of world trade.

When the first settlers arrived in Australia in 1788 Canada already had a long history. So it is not surprising that the industrial development of Canada has been in advance of Australia's.

This has been an important factor in the nature and scope of trade between the two countries. It could also be one important reason why the balance of trade has so persistently favored Canada, though another reason for this could be geographical.

Australia is relatively remote from Europe and the U. S. — the great trading centres of the world.

To sell in the Canadian market Australia must meet competition from highly competitive and more favorably situated suppliers. Canada does not face the same disadvantage in the Australian market.

Over 50 years of trade the balance has been strongly Canada's way. In the middle 30s Australian imports from Canada averaged about $30 million compared with Australian exports to Canada of $8 million.

Over the four most recent trading years ended 1958-59, comparable figures are—imports from Canada $51 million; exports to Canada $27 million.

The balance in Canada's favor persists despite the depreciation of the pound in terms of dollars.

Because of the importance of Australia's postwar import restrictions on Canadian-Australian trade, let me explain why Australia had to maintain them.

Australia had to find some means of keeping total imports from all sources, dollar and non-dollar, within a ceiling which we could afford in terms of the currency we could earn with our exports. This is why such great emphasis has been placed in recent years on the need for an export drive by Australian businessmen, as well as for fair access to overseas markets.

As Canadians know, we also had to apply more stringent restrictions on imports from the dollar area, including Canada.

This was due, not so much to Australia's own balance of payments—although Australia has a very large and persistent adverse balance of trade with the dollar area—but to Australia's position in the sterling area.

Since the war the sterling area has been short of dollars, and Australia had to join other sterling countries in restricting its use of them to more essential requirements.

The outlook for Canadian exporters to the Australian market is now much brighter.

Earlier this year the Australian government increased the import ceiling by $110 million a year. Restrictions on dollar goods were also substantially eased.

If our external exchange position continues to improve, further increases will be made in the ceiling.

Since Aug. 1, 1959, more than 50% of imports have no longer been restricted—90% or more have been able to be imported from any source.

Discrimination against dollar goods in the Australian market is now practically limited to motor vehicles and timber.

However, Canadian timber exporters have ample opportunity to compete on the Australian market. In fact, almost 30% of our total imports of timber comes from Canada, averaging about $10 million a year compared with $4.5 million prewar.

Canadian exports to Australia have not only grown in volume but have broadened in scope over the years. The recent measures taken by the Australian government can be expected to accentuate this trend.

Thirty years ago the five traditional Canadian exports to Australia (fish, motor vehicles, newsprint, machinery and timber), accounted for 70% of Australia's imports from Canada.

Today, although these items have greatly increased, they account for less than 60% of imports from Canada.

Only timber has increased its relative importance; fish has been reduced to a minor item.

On the other hand many new Canadian export items have made their appearance, and some — like aluminum and asbestos — have become major items.

On the Australian side the picture is quite different.

Four commodities (sugar, dried fruits, meat and wool) accounted for the bulk of our exports to Canada over the last 30 years. In the late 1920s they accounted for 75% of our exports to Canada. Today they make up nearly 85%.

Since so few commodities are so important it is vital to us that access to the Canadian market should be as free as possible.

It also emphasizes the need for us to find new market opportunities for other products.

Because Canadian business methods are the same as ours, we appreciate fully the need for active trade promotion.

We will shortly open a new Trade Commissioner post in Ottawa in addition to those in Montreal and Vancouver.

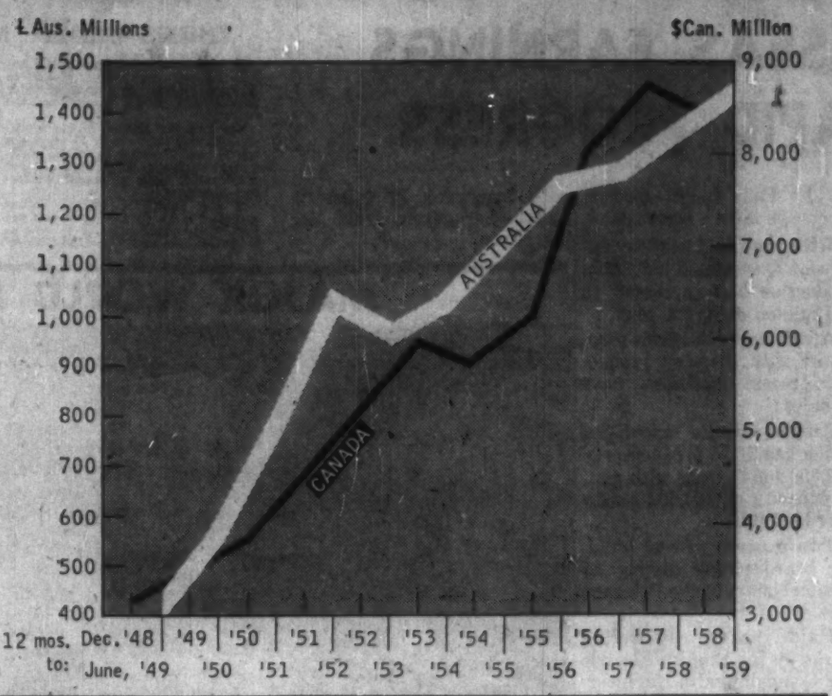
In March this year a trade mission of Australian businessmen visited Vancouver, and I have already announced that a further trade mission will visit Canada in 1960.

It will be on a more ambitious scale and will visit most major Canadian centres.

Its leader will be an eminent Australian, well known in Canada, Prof. Sir Douglas Copland, who was Australian High Commissioner in Ottawa from 1953 to 1956.

Australia is already a regular exhibitor at the great Canadian National Exhibition, held annually in Toronto.

Public and Private Investment



Investment Rate Steady

CANBERRA (Staff)—"The rate of development in Australia is pretty high."

So said the senior official, and no one will challenge him.

But how high?

Australian estimates are all over the place.

There are some signs of the queer sort of snobbery about investment and rate of growth to which Canadians were much prone in the years up to 1956.

In Canada it is now less popular to exaggerate the proportion of national income going into new investment.

Canadians know now that, in constant dollars, the percentage of GNP going into new investment was never higher than 25.7% though it looked like 27.7% in the terms of inflated dollars.

They also have a shrewd suspicion that this was too high for their own good.

Economists have never been able to estimate what may be the "right" proportion of national output to spend on new capital facilities. It varies too widely for different countries at different times.

A broad concensus in recent years has been that 20% was a very respectable sign of a vigorous and growing economy, and that 25% would be a phenomenal, and possibly dangerous, rate.

Experts have insisted, above all that steadiness is—as Jeeves said—"of the essence." Wide swings from year to year suggest instability and, probably, inflation.

In this light, the FP estimates of Australian resources devoted to capital investment in recent years are entirely reassuring.

They have been put on a basis which makes them more comparable with the Canadian figures.

Two major changes have been made in the Australian official figures.

• Changes in inventories have been excluded.

The question we are out to answer is: How much of the country's output in a given year went into constructing or acquiring new buildings or plant or equipment which will contribute to its output or its welfare in future years?"

• Purchases of automobiles and station-wagons for personal use have been deducted.

If the purchase of a new family car is to count as part of the country's addition to productive facilities, why not the refrigerator and the cooking-stove and the deep-freeze unit?

For want of any better measurement we have accepted an arbitrary estimate that 30% of new passenger cars are for business use, and 70% for personal use.

This is the ratio suggested in the text of the Australian White Paper. It is also the ratio which the Canadian statisticians used as a benchmark in 1951.

Almost certainly it overstates the business share of the new cars. Since 1951 the Canadian figure has been scaled down successively, until it is now well below 20%.

The impressive thing about the Australian record is its steadiness.

For the last eight years the ratio has not varied by as much as 1%, and it has never fallen below 19%.

The fact that the Canadian percentages look higher does not necessarily mean that they are any more desirable.

And the Australian record shown here is much more persuasive evidence of steady growth than any of the 25%, 28% or 32% figures which have been bandied about in Australia.

Public, Private Investment

Australia			Canada		
Fiscal year	(£A millions)	% of GNP	Calendar year	($C millions)	% of GNP
1948-49	404	14.5	1948	3,177	28.5

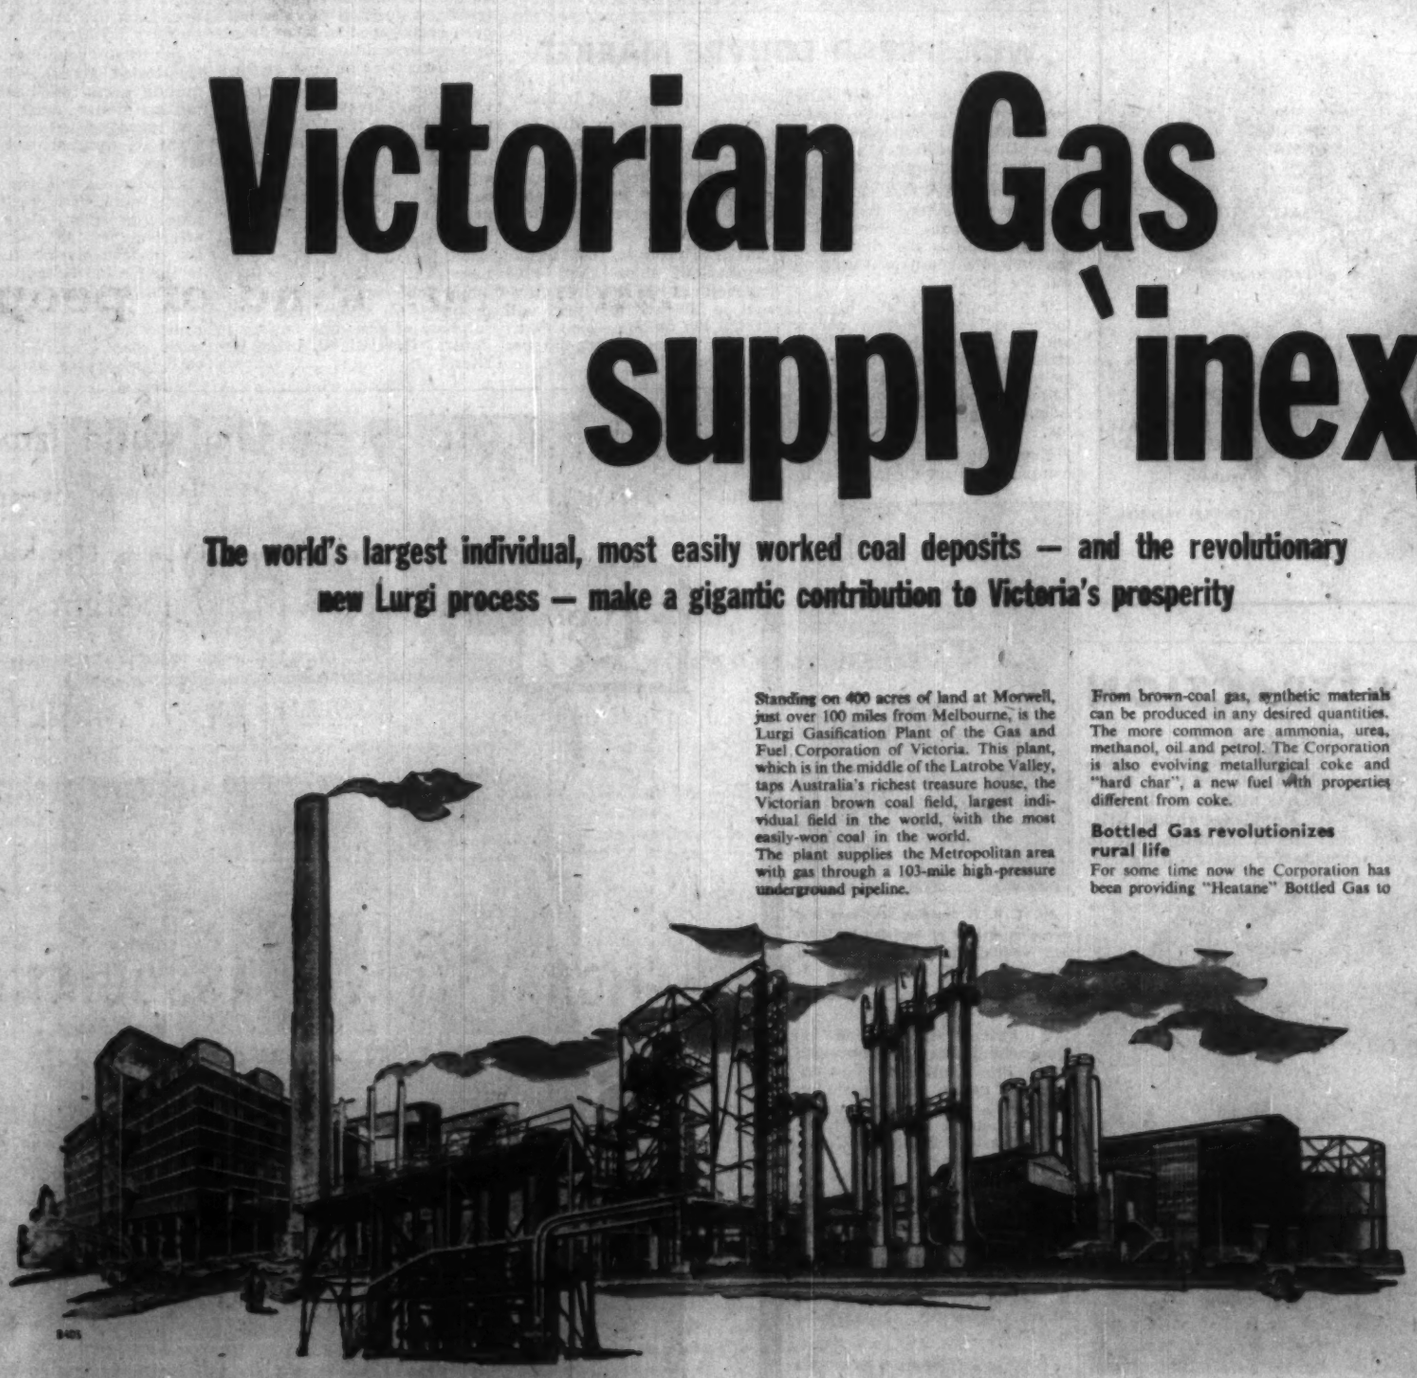
BIGGER THAN GOLD...RICHER THAN URANIUM

Victorian Gas supply 'inexhaustible'

The world's largest individual, most easily worked coal deposits — and the revolutionary new Lurgi process — make a gigantic contribution to Victoria's prosperity



Standing on 400 acres of land at Morwell, just over 100 miles from Melbourne, is the Lurgi Gasification Plant of the Gas and Fuel Corporation of Victoria. This plant, which is in the middle of the Latrobe Valley, taps Australia's richest treasure house, the Victorian brown coal field, largest individual field in the world, with the most easily-won coal in the world.
The plant supplies the Metropolitan area with gas through a 103-mile high-pressure underground pipeline.

From brown-coal gas, synthetic materials can be produced in any desired quantities. The more common are ammonia, urea, methanol, oil and petrol. The Corporation is also evolving metallurgical coke and "hard char", a new fuel with properties different from coke.

Bottled Gas revolutionizes rural life

For some time now the Corporation has been providing "Heatane" Bottled Gas to all areas of Victoria beyond the gas mains. "Heatane" is propane gas, a product of petroleum refining. When bottled under pressure, it becomes a liquid. When pressure is released, such as turning on a gas jet, the liquid becomes an efficient gas.
"Heatane" is becoming known nation-wide. It is sold in Queensland, New South Wales, Victoria, Tasmania and part of South Australia. In addition, it is available in Fiji, and Australian expeditions have used "Heatane" in Antarctic explorations.
With bulk storages of "Heatane", — refilled as necessary from road tankers, — industries, hospitals, hotels and restaurants in country areas can enjoy all the benefits of their own gas supply.

Gas and the community

The Gas and Fuel Corporation is a basic factor in the life, health, progress and happiness of Victoria. Gas is the popular, economically priced domestic fuel for cooking, water-heating, refrigeration and room-warming. It is the universal fuel for cooking on a large scale — in hotels, restaurants, clubs and industrial canteens. Gas heats large buildings like factories, offices, picture theatres, even churches. No job is too big for gas. In industry, more than 3000 different processes using gas have been listed. Of the Corporation's total gas sales, more than 20% goes to commerce and industry. With an efficient source of heat to produce better goods more quickly and economically, the community benefits by being able to purchase these goods more cheaply. With new houses being constructed daily, new industries establishing themselves and with present consumers expanding their usage of gas, it is comforting to know that there is no possibility of any Victorian gas shortage in the foreseeable future. This is ensured by two great factors — the world's largest deposit of brown coal, and the Lurgi Plant of the Gas and Fuel Corporation of Victoria.

GAS AND FUEL CORPORATION OF VICTORIA

196 Flinders St., Melbourne, Victoria, Australia

QUEENSLAND IS MAJOR STATE

FOR OVERSEAS EARNINGS AND RAPID PROGRESS

Queensland, the most richly endowed area of Australia for natural resources, is embarking on its second 100 years of Statehood with a drive for new secondary industries and expansion of existing primary and extractive fields.

The resources of the northern State, with an area of 670,000 square miles and more than 3,000 miles of coastline, are enormous.

Queensland has one-quarter of the nation's usable land, its best river system, an incalculable amount of mineral wealth, the best dispersed cities and towns, and widespread deposits of coal and raw materials.

The population of more than 1,400,000 is growing fast from natural increase and migration.

It is already the home of the fourth largest sugar industry in the world, with annual production of 1,370,000 tons of sugar worth more than 135 million dollars.

The great belts of natural grasslands carry 22 million sheep and more than 6 million beef cattle.

As Australia's leading cattle-producing State since 1880, Queensland contributes more than 70 per cent of the country's beef exports.

Great strides are being made in the expansion of these primary industries and the important grain growing industry, with expenditure of millions of dollars on new technologies, clearing of land, aerial seeding and fertilising and water conservation.

Apart from the great sugar, beef and wool industries, Queensland's wide variety of soil and climatic conditions enables it to grow cold weather fruit, pineapples, tobacco, cotton and most other crops.

But the most dramatic advance in recent years has been the introduction of new secondary industries in the pattern of industrial expansion.

These factors have helped this trend: Big deposits of all types of coal, including the Blair Athol open cut field with reserves of 200 million tons; a greatly improved transport system based on a 6,456 mile railway system and a series of deep water ports; and adequate thermal and hydro-electric power.

Queensland ports discharged and shipped more than two million tons of cargo last year. Recent improvements over the chain of ports up the Pacific coast have included deepening of berths and installation of bulk handling facilities.

Electricity authorities are spending an average of 25 million dollars a year to install more capacity. More than 550,000 kilowatts installed capacity includes the new Tully Falls hydro-electric scheme in North Queensland.

With the rapid postwar expansion Queensland industrial production has increased to 330 million dollars a year.

Apart from industries associated with primary production, recent additions have included:

Cement works expansion which has lifted production to 450,000 tons a year with aimed capacity of 700,000 tons a year by 1961.

Two paperboard and building board plants costing 15 million dollars in the Brisbane area.

Major heavy engineering works by the English Electric and Commonwealth Engineering companies.

Numerous smaller branch plants by Australian and overseas firms.

The State Premier (Mr. Frank Nicklin) says: "Until now the State's wealth, which has given Queenslanders a standard of living comparable with the best in the world, has come almost solely from our primary industries. The secondary industries field is wide open. We invite overseas investors to enter.

Queensland with is mineral, foodstuffs and manufactured goods earns more overseas income for Australia than any other State in the Commonwealth.

This volume is growing with expansion of industry and higher output from Mt. Isa Mines.

THIESS GROUP MAJOR BUILDER

In Thiess Bros. Ltd. Queensland has the biggest contracting group in Australia engaged on a string of major development works throughout the country.

The firm was started by five brothers with one tractor only 25 years ago but is now engaged on dams, roadworks, tunnels, earthmoving and other construction work for major Australian industries.

It has nearly 40 million dollars worth of work in hand and was the first Australian contractor to receive a major contract on the Snowy Mountains hydro-electric and irrigation scheme.

It has completed major construction work for Mt. Isa Mines and Mary Kathleen Uranium and is expected to do much of the work on the 70 million dollar reconstruction of the Townsville-Mt. Isa railway line.

Apart from construction activity Thiess Bros. is developing a major opencut coal mine at Kianga in Central Queensland and first shipments have been made to Japan.

The shares are listed on Australian Stock Exchanges.

MAJOR WORLD MINE

A general view of Mt. Isa Mines copper smelter, lead and zinc mill and minesite, with ownship in background. One of the world's major mines, it has a daily ore treatment of 8,000 tons now being expanded to 14,400 tons a day.

STOCK EXCHANGE FACILITIES

The Brisbane Stock Exchange, one of the leading Exchanges in Australia, provides a wide range of up-to-the-minute services for buying and selling of all Australian stocks and bonds. Over 1,500 individual stocks are officially listed on one or another of the Australian Associated Stock Exchanges. Rigid listing requirements precede all listings.

Market fluctuations on other Exchanges are quickly registered at the Brisbane Stock Exchange and in the offices of Member Firms, by a ticker system provided by Reuters Economic Services. This net-work extends from Adelaide in South Australia, to Cairns in the far-north of Queensland. In terms of distance—2,500 miles—this is one of the longest Stock Exchange "hook-ups" in the World.

Australian Companies issue Stock Certificates to all of their shareholders, including Overseas Shareholders. Dividend cheques, generally posted half yearly, are negotiable by Overseas shareholders in the form of currency from which the original capital investment emanated. This means that if Australian shares were bought with Canadian or United States dollars, dividend cheques would be payable in these respective currencies.

Following the growth of Overseas investment in Australia over the last few years, Broking Houses and Trading Banks have widened the range of their services. They have successfully reduced formalities to the barest minimum so that those who make investments in the Commonwealth will be a walking advertisement for Australian industry, both now and in the years to come.

A number of Broking Houses have produced some excellent publications for the benefit of Overseas Investors, setting out exactly how the Australian Exchanges operate, and describing the more important industries and prominent growth Companies within those industries. A Brisbane Broking House in publishing an attractive brochure of this nature recently, calculated that the 76 stocks specially recommended for Overseas clients had shown a 142% gain in capital value in the period 1954/59. This is an average of 32% per annum without taking dividends into account. It is important to realise that there is no capital gains tax in Australia.

Most of the Commercial Banks have established subsidiary nominee companies which act for any person or corporation desiring to use their services for settlement or as nominee for Stock Exchange dealings. By this arrangement, the Nominee Company of the Bank effects settlements, collects all dividends, arranges to take up new issues, collect bonus issues, or to sell rights, and remits the income to the beneficial owner in his country of domicile as required.

Australian brokerage rates and banking charges are a good deal less than either their Canadian or United States counterpart.

HUGE MINING ACHIEVEMENTS OF WORLD INTEREST

Expansion of two major mining projects which rank in size with many others in the world is being pushed ahead in North Queensland.

They are the massive copper and lead-zinc ore bodies of Mt. Isa and the vast bauxite deposits at Weipa.

Mt. Isa is already Australia's biggest mine with annual metal sales of 45 million dollars.

A major expansion programme which has already cost more than 40 million dollars has lifted daily ore production to 7,500 tons and work under way will increase production to 14,000 tons a day within about four years.

The company has now passed 8,000 tons a day ore production.

The unique deep Mt. Isa ore body has adjoining copper and lead-zinc lodes and emphasis can be switched according to metal prices.

Mt. Isa Mines Ltd., which is 53 per cent owned by the American Smelting & Refining Co. of New York, has completed an electrolytic copper refinery at Townsville on the coast with a capacity of 40,000 tons a year and work is under way to increase this to 60,000 tons a year.

The Queensland Government is currently spending 22 million dollars to strengthen the 800 mile railway line between Mt. Isa and the port of Townsville to carry the increased production.

Mt. Isa is one of the world's major ore bodies with reserves estimated at as high as 200 millions tons. It is also an ably-managed low cost producer with after-taxes profits of 9 million dollars in the fiscal year ended June 30, 1959.

In the 12 months to June 30 Mt. Isa Mines increased ore production by 37½ per cent to 2,278,579 tons.

Copper output was 41,945 tons, lead bullion 57,035 tons and zinc concentrates 27,280 tons.

By pushing ahead expansion despite difficulties in arid country so far from its port Mt. Isa Mines has established a thriving town with full services for 12,000 people and employment for more than 3,000.

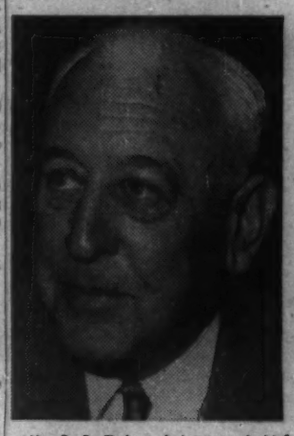
New projects now under way include a new shaft with as great a haulage capacity as any deep underground mine in the world, a 500 feet high concrete smelter stack and a 60 megawatt powerhouse.

At Weipa on Cape York Peninsula the discovery of huge bauxite deposits in 1956 led to an agreement between the Queensland Government and the Commonwealth Aluminium Corporation for the company to develop the field.

Comalco, which has already spent about 3 million dollars proving the field, is committed to expenditure of a minimum 100 million dollars in mining, port and alumina plant construction.

If it is decided to add an aluminium smelter using hydro-electric power in New Guinea or thermal power fuelled by huge coal deposits at Blair Athol in Central Queensland expenditure will rise to 400 million dollars.

Equal partners in Comalco are mining giant Consolidated Zinc Corporation and the British Aluminium Co, now controlled by Reynolds Metals of U.S.A.



Mr. G. R. Fischer, chairman and chief executive officer of Mt. Isa Mines Ltd.

The Weipa bauxite deposit was one of the attractions of British Aluminium when Reynolds Metals made its historic take-over bid.

Aluminium Laboratories Ltd, a subsidiary of the Aluminium Ltd of Canada, has extensive bauxite prospecting rights in the same area and has also proved deposits.

The third major mining project in North Queensland is the text-book operation in uranium at Mary Kathleen.

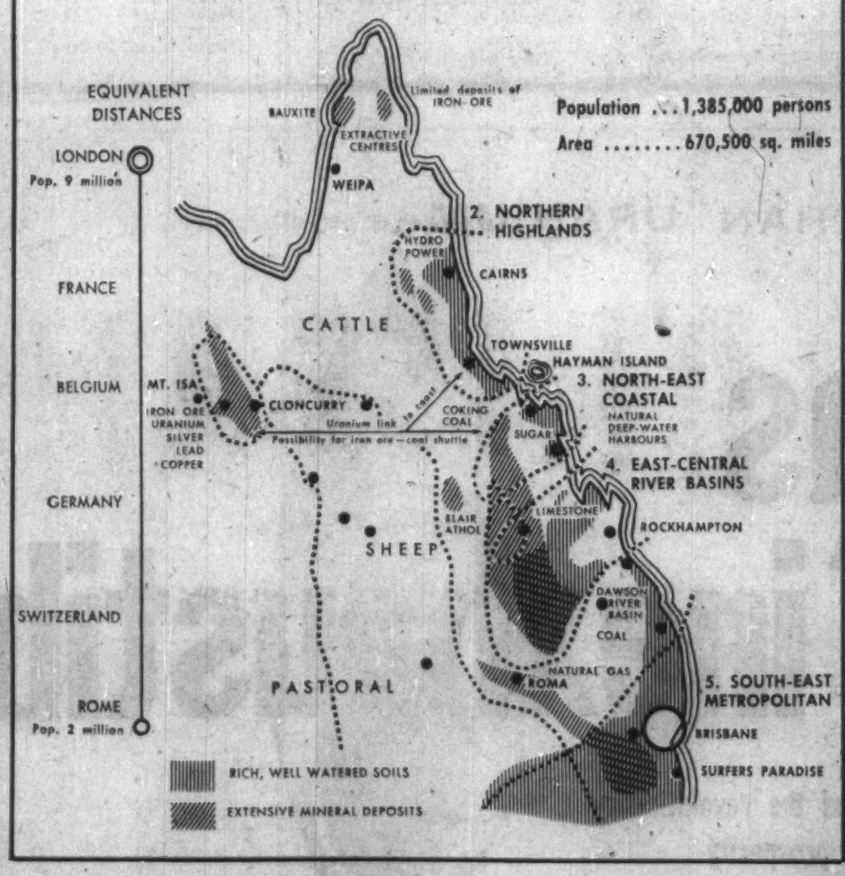
In three years a company Controlled by the Rio Tinto mining group established a 25 million dollar mine, township and uranium oxide treatment plant in isolated country near Mt. Isa.

Ore from a mountain of uranium, found by a party of amateur prospectors on a Sunday afternoon in 1954, is treated in the modern plant and exported to the United Kingdom under a 100 million dollar contract.

The eight members of the prospecting party have shared more than 2 million dollars in cash and shares for their find.

QUEENSLAND

LAND OF OPPORTUNITY AND SUNSHINE



GOVERNMENT HELPS NEW INDUSTRIES

The Queensland State Government has engaged in a major programme in the last 2½ years to attract new industries to Queensland.

In the period 60 new industries worth more than 9 million dollars have begun operations.

These comprise 27 major and 33 smaller industries.

The new companies, which include several world organisations and range from motor vehicle assembly and heavy engineering to consumer goods, have already lifted factory employment by 5 per cent.

An industrial estate of 400 acres at Wacol, near the capital Brisbane, has been opened and this will be the first of its type in Australia.

It is aimed at attracting companies which do not want to build their own factories, and it will be followed by other estates.

The Country-Liberal Government's moves to encourage new industries have included:

- An industry promotion delegation led by the Deputy Premier and Minister for Labour and Industry (Mr. K. J. Morris) last year toured the United States, Canada, United Kingdom and Europe. This has been followed by negotiations with more than 100 companies on plans to establish themselves in Queensland.
- Expanded Secondary Industries and Developments sections of the Government have made extensive surveys of natural resources and facilities to provide information for firms considering investment or plant operations.
- Industry leaders and the local authorities which supply electricity, water and services have been encouraged to form development associations to promote new industries in their regions.

Among the world companies which have recently come to Queensland is the Willys Motor Corporations and an Australian offshoot is assembling Jeeps with a 63 per cent Australian content which will rise to 100 per cent by the end of this year.

The Government has also assisted the Mt. Morgan Ltd. company in interesting a number of major chemical companies in proposals for a 15 million dollar sulphate of ammonia factory in Central Queensland, using pyrites.

WIDESPREAD LOUVRE MARKET

One of the most dramatic moves in Queensland's post-war industrial expansion has been the development of the world's biggest maker of glass and metal louvre windows.

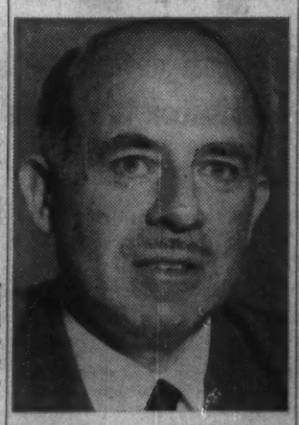
From a wartime maker of black-out shades, Appleton Industries Ltd. has become an exporter to 104 countries throughout the world.

The Company is the biggest louvre seller in North America and its products have been installed in Emperor Haile Selassie's palace in Addis Ababa, Ethiopia, and throughout Africa, Asia, Europe and South America.

Reversing the usual trend, the company has set up factories in London, and the West Indies.

Under Englishman Mr. Tom Spalding as chairman and chief executive officer, the company has achieved such cost control and production line efficiency that it can undersell most local producers.

In the process this public company of more than 1100 shareholders has lifted employment to 700 and this year will net 450,000 dollars — an earning rate of more than 30 per cent to capital.



Mr. T. H. P. Spalding, chairman and managing director of Appleton Industries Ltd., world's biggest louvre manufacturers.

Further information on Queensland may be obtained from the Australian Government Trade Commissioner, Montreal, or from the Queensland Labour & Industry Minister, Treasury Building, Queen Street, Brisbane.

Publications include a 126 page illustrated booklet—"Land of Opportunity and Sunshine." Obtainable from the Director, Secondary Industries Division, Department Labour and Industry, Treasury Building, Queen Street, Brisbane, Queensland, Australia.

Tourist information is available from the State Government Tourist Bureau, Brisbane.

BARRIER REEF, FEATURE TOURIST ATTRACTION

With the attractions of unrivalled variety, the unique Great Barrier Reef and superb sub-tropical climate, Queensland is the tourist State of Australia.

Provision of luxury hotels and better transport is rapidly making it more of a world attraction.

The advent of jet plane services across the Pacific has brought the Great Barrier Reef within a few days travel of North America and luxury liners provide a more leisurely alternative journey.

Natural attractions include the colourful jungle country of the Atherton Tableland, with its spectacular waterfalls, crater lakes and tropical vegetation.

From Cairns, which has an air-conditioned hotel, visitors can travel 17 miles to Green Island, where coral and fish can be seen from an underwater glass observatory, the only one in the Southern Hemisphere.

Among the numerous resorts on the islands of the Great Barrier Reef is the luxury Royal Hayman Hotel.

The island resorts, which have a mean year round temperature of 76 degrees, have full facilities for swimming, fishing, aquaplaning, skin diving and coral inspection.

Nearer the capital Brisbane, with its air conditioned hotels, there are hundreds of miles of superb surfing beaches.

On the Gold Coast, only an hour's drive from Brisbane, a coastal strip 20 miles long has been developed into a colourful playground of luxury hotels, motels, apartment houses, canals and restaurants.

With its tremendous variety, Queensland offers big game hunting in the wild northern Gulf country, boating, fishing and sightseeing.

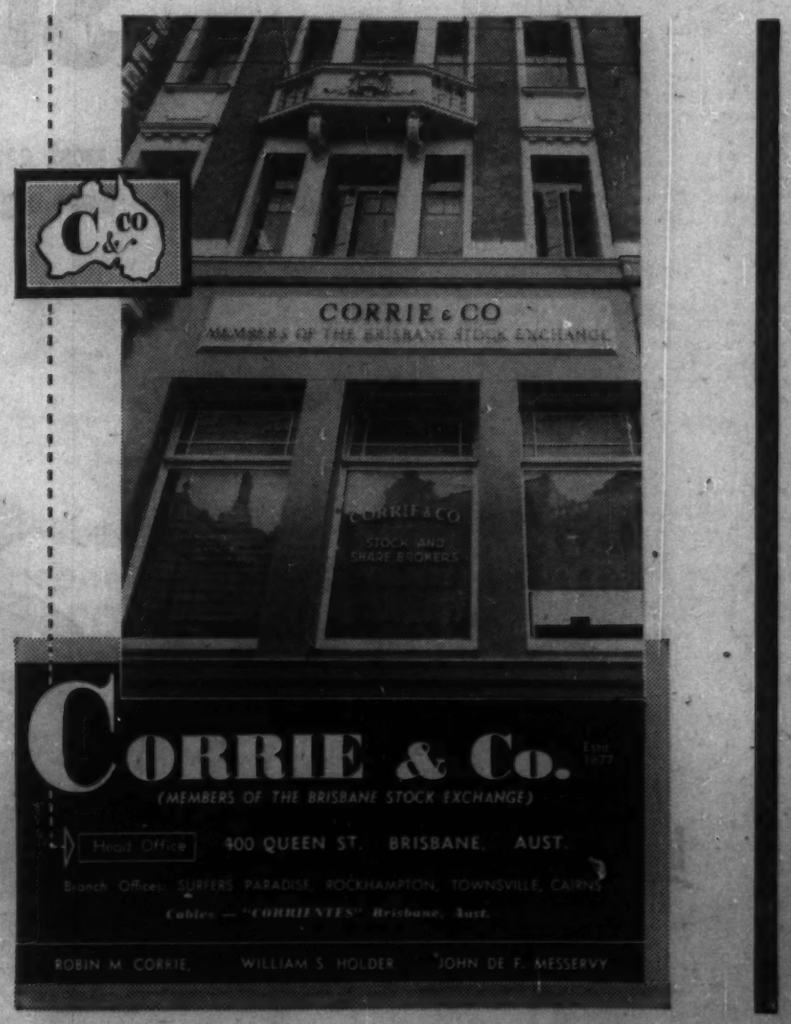
Transport is by the most modern airliners, air conditioned trains, road coaches or launches.

The tourist industry, already worth more than 12 million dollars a year, is one of the fastest growing in the State.

A new development in the expanding tourist trade is the boom in motels up the Queensland coast.

Carapark Holdings Ltd., Australia's biggest motel chain, has motels on the Gold Coast, Maryborough and Brisbane and is building more to provide for the growing motoring tourist traffic.

The sweep of surfing beaches on Queensland's Gold Coast, only 50 miles from the capital, Brisbane.



LARGEST and newest blast furnace in Australia started operation at Port Kembla last June, has produced up to 2,480 short tons per day.

Foreign Capital

Dependence Increasing

CANBERRA (Staff) — Australia's dependence on foreign capital — still mostly British — is growing rapidly. But it is still far lower than Canada's.

For the last three years Canada has been drawing on foreign resources for no less than 35% of its net capital formation.

The comparable figure for Australia, over the three years, was 9%.

But three years ago — that is, in the fiscal year 1956-57 —Australia earned a surplus from the rest of the world. It was a substantial one, 10% of its own capital formation.

That lifts the three-year average for Australia considerably. (Canada hasn't had such a surplus for 10 years except for a minor freak in 1952).

Taking only the last two years, Australia's dependence on foreign resources was twice as high. It amounted to 17.5% of its own contribution to new capital.

Three years ago, when Canadians were still in something of a fog about their dependence on U. S. investment (and were being encouraged in confusion by their government), **FP** shocked many of them (not least in official quarters) by revealing that 33% of the new investment was drawn from abroad.

No sooner was this figure confirmed by the official statisticians than it rose still higher. By **FP's** computation it reached 38% in 1957, then fell back to 35% last year.

DBS gives an average of 35% for the years 1956-58.

When Australian figures are adapted to the same standard of measurement, they result in the percentages shown in the adjoining table.

Public and private investment has been adjusted, first, by taking out 70% of the new passenger car sales. But spending on inventories is still included for purposes of this calculation.

On the other hand depreciation allowances have to be deducted to provide a net figure. A gross figure might be preferable ideally, but that would require a knowledge of the share of depreciation allowances which accrued to foreign-controlled firms. Such is not available from published figures.

The Australian balance of payments have also been adjusted by deducting the retained earnings of foreign-controlled companies — though in this case they have to be added back.

What this calculation shows is the margin by which total domestic savings fell short of total new investment in each country.

But it does not follow that Australia — any more than Canada — used all its domestic savings for investment at home. Some of them may have been invested abroad in various forms.

To the extent that this was done, the new capital developments in Australia were financed by foreign money to a greater extent than shown here.

In Canada, for example, the 35% use of foreign resources over the last three years allows for Canadian savings which were not invested at home but would have covered another 9% of domestic investment.

If you make the calculation on this basis — in order to find out how much of the capital development in Canada was financed directly by Canadians — you find it was very much less than 65%.

The official statisticians say it was only 56% Canadian-financed in the last three years, and 44% directly financed by capital from abroad.

The most recent Australian figure of 17% would also rise if account were taken of all the capital invested abroad—through government contributions or private transactions.

FOREIGN CONTROL

Official Australian figures give no estimate of total foreign control over industry. They show only the inflow of new capital in the last 10 years, plus the accumulation of retained earnings in foreign-controlled subsidiaries.

But on this basis the stake of overseas investors in the Australian economy has grown since 1947 by far less than the foreign control over Canadian business.

On a per capita basis, the non-resident owned stake in Australian subsidiaries increased by barely $170 (£77) for each Australian. The comparable figure for Canada is nearly $460.

Direct investment is by no means the whole story.

Both Australian and Canadian companies have some non-resident purchasers for their securities. They may issue bonds in other countries. Short-term movements across the exchanges can be decisive for a country's balance of payments.

In all these respects the record emphasizes that external capital still has only a minor role in Australia compared with Canada.

CANADA'S STAKE

Canadian investors made only a small contribution to Australia's overseas capital in the post-war years.

A government loan of $15 million was floated in Canada in 1955, and Canadians have an interest in several large Australian companies. But official figures are difficult to reconcile completely.

The Commonwealth Statistician gives an estimate of "paid up shares, debentures and other obligations of Australian companies" owed to Canada. His figure for June 30, 1958 is £6.9 million, which at current exchange is just under $15 million.

Information made available to **FP** in Ottawa puts the "book value" of Canadian private investments in Australia at $42 million at the end of 1958.

The increase since 1947 is £3.4 million on the Australian calculation and $25 millions on the Canadian basis of "book value".

But whichever basis you take, Canadians never had the beneficial ownership of all this investment. The best available estimate is that about half the total represented ownership by Canadians. The rest represented foreign holdings in nominally Canadian companies.

Since these estimates were made, **Ford** of U. S. has substantially reduced the Canadian interest by buying back Canadian-held shares in **Ford of Canada,** which is the corporate parent of **Ford of Australia.**

GOVERNMENTS' ROLES

Most of Australia's government borrowing abroad is on the security of the federal government, though the states get most of the proceeds.

The Canadian situation is just the reverse.

Canada's federal government has been a net lender to other countries since the war. Payment of interest and repayment of capital now brings money into Canada each year.

But the junior levels of government — provinces and municipalities — have fully made up for it.

The Australian government's foreign loans were repayable in foreign currencies — in New York, Toronto, London, Switzerland and to the International Bank.

Many of Canada's provincial and municipal loans are payable in U. S. dollars.

Counting in these deliberate borrowings abroad with foreign purchasers of government securities issued in Canada, Canada's bonded obligation to foreign lenders is far larger than Australia's. The per capita burden at mid-1959 came to $304 for every Canadian and $185 for every Australian.

Foreign Resources

Use of foreign resources in Australian development

Keeping Wary Eye On Trade Deficit

CANBERRA (Staff) — Australia does not yet attract enough foreign capital to be able to cover unlimited spending in other countries.

Unless it changes its mind, it does not want to.

Canada is the only country in the world that can go on, year in and year out, buying foreign goods and services and paying for little more than 80% of them. (That is about the current state of Canada's deficit with the world.)

The inrush of U. S. capital to buy up Canadian resources or finance Canadian development on a fixed interest basis is unique—probably unprecedented in the world's history.

It enables Canada to keep on spending $1,000 million to $1,500 million a year above what it can earn abroad. And instead of being treated like a debtor, Canada has its dollar pushed to a large premium.

Australia, not being in this position, and (according to what the authorities say now) not wanting to be, every development in the Australian economy has to be examined as to its effect on the balance of payments.

There is nothing strange about this. It is the common lot of nations, which, like individuals, have to pay their way in the world. Even the U. S. is starting to worry about the same thing.

Worry about the balance of payments—in the U. S., the U. K., France or Australia—means keeping a wary eye on the official reserves.

At June 30, 1959, Australia had reserves of £516 million (about $1,135 million), of which £71 million was considered to be working balances, and £445 million the central reserve.

This is enough, obviously, to cover any deficit that misfortune might bring — until remedial measures could be taken.

But it is not enough to stand even three years like 1954-55, with the deficit running at £142 million per year —not unless they were interrupted by a year like 1955-56 when the reserves were increased by £212 million.

A government with a miserly disposition is always apt to sit on its reserves, and take no risks until they have risen to what it considers a fool-proof point.

Often this never happens and the refusal to take risks ends in stagnation.

The present Australian government does not take that view. It means to use its reserves as a cushion, and to run some risks for the sake of expanding the economy.

That's why it has accepted an import bill of £850 million on goods alone for the present fiscal year.

This is £50 million more than the limit it set last year, and £57 million more than was actually spent.

It has also ended discrimination between dollar goods and goods from anywhere else, except in certain commodities amounting to about 10% of its imports.

But taking an optimistic view of the year's prospects, even at some slight risk to the reserves, is one thing.

It is something different to launch the economy unprotected into the international maelstrom and let the balance of payments look after itself — as Canada has been doing.

The balance of payments will have to look a good deal more secure before Australia will take the risk of freeing foreign exchange from all control.

The most consistent drain on foreign exchange in these last years has not been the purchase of goods, which is under control, but the variety of payments which go under the name of "invisibles."

In the last three fiscal years, Australia has actually earned more from its export of goods than it spent on imported goods. (That's something Canada has done only twice since 1950—handsomely in 1952 and by a mere $13 million in 1954.) But Australia's surplus on merchandise trade was not big enough to cover its deficit on invisibles except in 1956-57, and these invisibles are making up a growing proportion of total foreign spending.

In the last two years they amounted to 30% of the total. Five years ago it was only 25%.

This is still lower than the Canadian proportion, which is now running about 32%.

Much the biggest item in the invisible payments abroad is, for both countries, the cost of paying interest on foreign debt and dividends to foreign owners of their businesses. And it is rising steadily.

Both countries also collect some annual revenue on the property they own abroad.

In both countries the annual service of foreign capital has increased by just over a quarter in the last five years after allowing for receipts.

Canada, having received far more investment from abroad since the war, has to pay substantially more each year. At mid-year 1959 the Canadian payments amounted to $25.60 for each of the 17 million men, women and children.

Each of the 10.1 million Australians had a share of about $18.50, and the Australian debt was growing rapidly.

The ponderous phrase "balance of payments deficit on current account" — which is all too familiar both in Australia and Canada — means simply: "Spending more money abroad than you can afford out of your current earnings abroad."

Both countries do it.

The question is: How do they cover the gap?

Most important for both countries is the foreign capital which comes in for long-term investment. It may be direct investment in a controlled subsidiary, long-term lending on a bond, or simply the purchase of Australian or Canadian securities by non-residents.

Meeting the Bills

How Australia and Canada meet their deficits on international transactions.

	Latest year (July, 1958-June, 1959)		Last five years (July, 1955-June, 1959)	
	Australia	Canada	Australia	Canada
External spending came to	£1,132	$7,824	£5,510	$37,400
This exceeded external earnings by	£153	$1,332	£600	$5,470
Deficit as a percentage of external spending	13%	17%	11%	15%
This was covered by: (Percentage of external spending)				
1. Long-term investment of foreign capital	...	13.5%	5%	12%
2. Short-term capital movements, commercial "leads and lags" and unaccounted for	10% ...	3%	3%	2%
3. Government borrowing† and lending	3%	5%	2%	1%
TOTAL CAPITAL	13%	17%	10%	15%
REDUCTION IN RESERVES	*	*	1%	*

*Less than 1% of external spending during period.

†Government borrowing means, for Australia, new loans overseas. For Canada, it means net repayment of old loans.

Hardwood Yields Woodpulp

A triumph of scientific research made possible the rapid development of the paper industry in Australia since the war.

It was not until 1939 that Australian scientists discovered ways to produce pulp and paper from the native eucalypt hardwoods.

Now, 460,000 tons out of the annual consumption of around 700,000 tons of paper and board are made locally. Most of the wood came from varieties of hardwood gums in Tasmania and Victoria, with about 10% from the plantations of imported softwoods, as in South Australia.

The principal kinds of paper not now made are magazine papers, and tissues.

But both gaps are being filled.

Associated Pulp and Paper Mills Ltd. is planning an extension to its mill at Burnie, Tasmania, to meet the current demand for 35,000 tons of magazine paper.

Australian Paper Manufacturers Ltd., in conjunction with **Cellulose (Australia) Ltd.,** is beginning to produce tissue paper in South Australia; and newcomers to the Australian paper industry are also entering this field.

Bowaters, in conjunction with the **Scott Paper Co.,** have announced plans for a $5 million plant on the outskirts of Melbourne. They say it will be the first fully integrated paper manufacturing process in Australia.

With further extensions planned by **Australian Paper Manufacturers Ltd.** to produce more paperboard and more wrapping paper, the only item not headed for increased domestic production is newsprint.

Out of an annual consumption of about 260,000 tons, Australia's one newsprint mill at Boyer, Tasmania, produces about 83,000 tons.

The rest is imported from Canada, U. K., New Zealand and Scandinavia. Canada's share last year was 62,850 tons, out of imports of 194,000.

U. K. shipped 60,500 tons, New Zealand, 40,000 tons, and Sweden 19,000 tons.

Although there has been much discussion about increasing capacity at the Boyer mill, which is controlled by the newspaper publishers, nothing has come of it.

The most rapid increase of sales is by N. Z's new mill, owned by the **Tasman Pulp and Paper Co.**

Cost of Foreign Capital

(Australian fiscal years ending June 30. Conversion rate: £A1 = $Cdn. 2.20)

	($ Cdn. Millions)

BRISBANE

CAPITAL CITY OF Queensland

This beautiful, bustling city, Northernmost Capital in Australia is growing and growing — a healthy youngster. 100 years ago there was little here except bush and nomad aborigine hunters.

NOW- Brisbane has • SPACE • TRANSPORT • POWER • MARKETS and 570,000 PEOPLE!

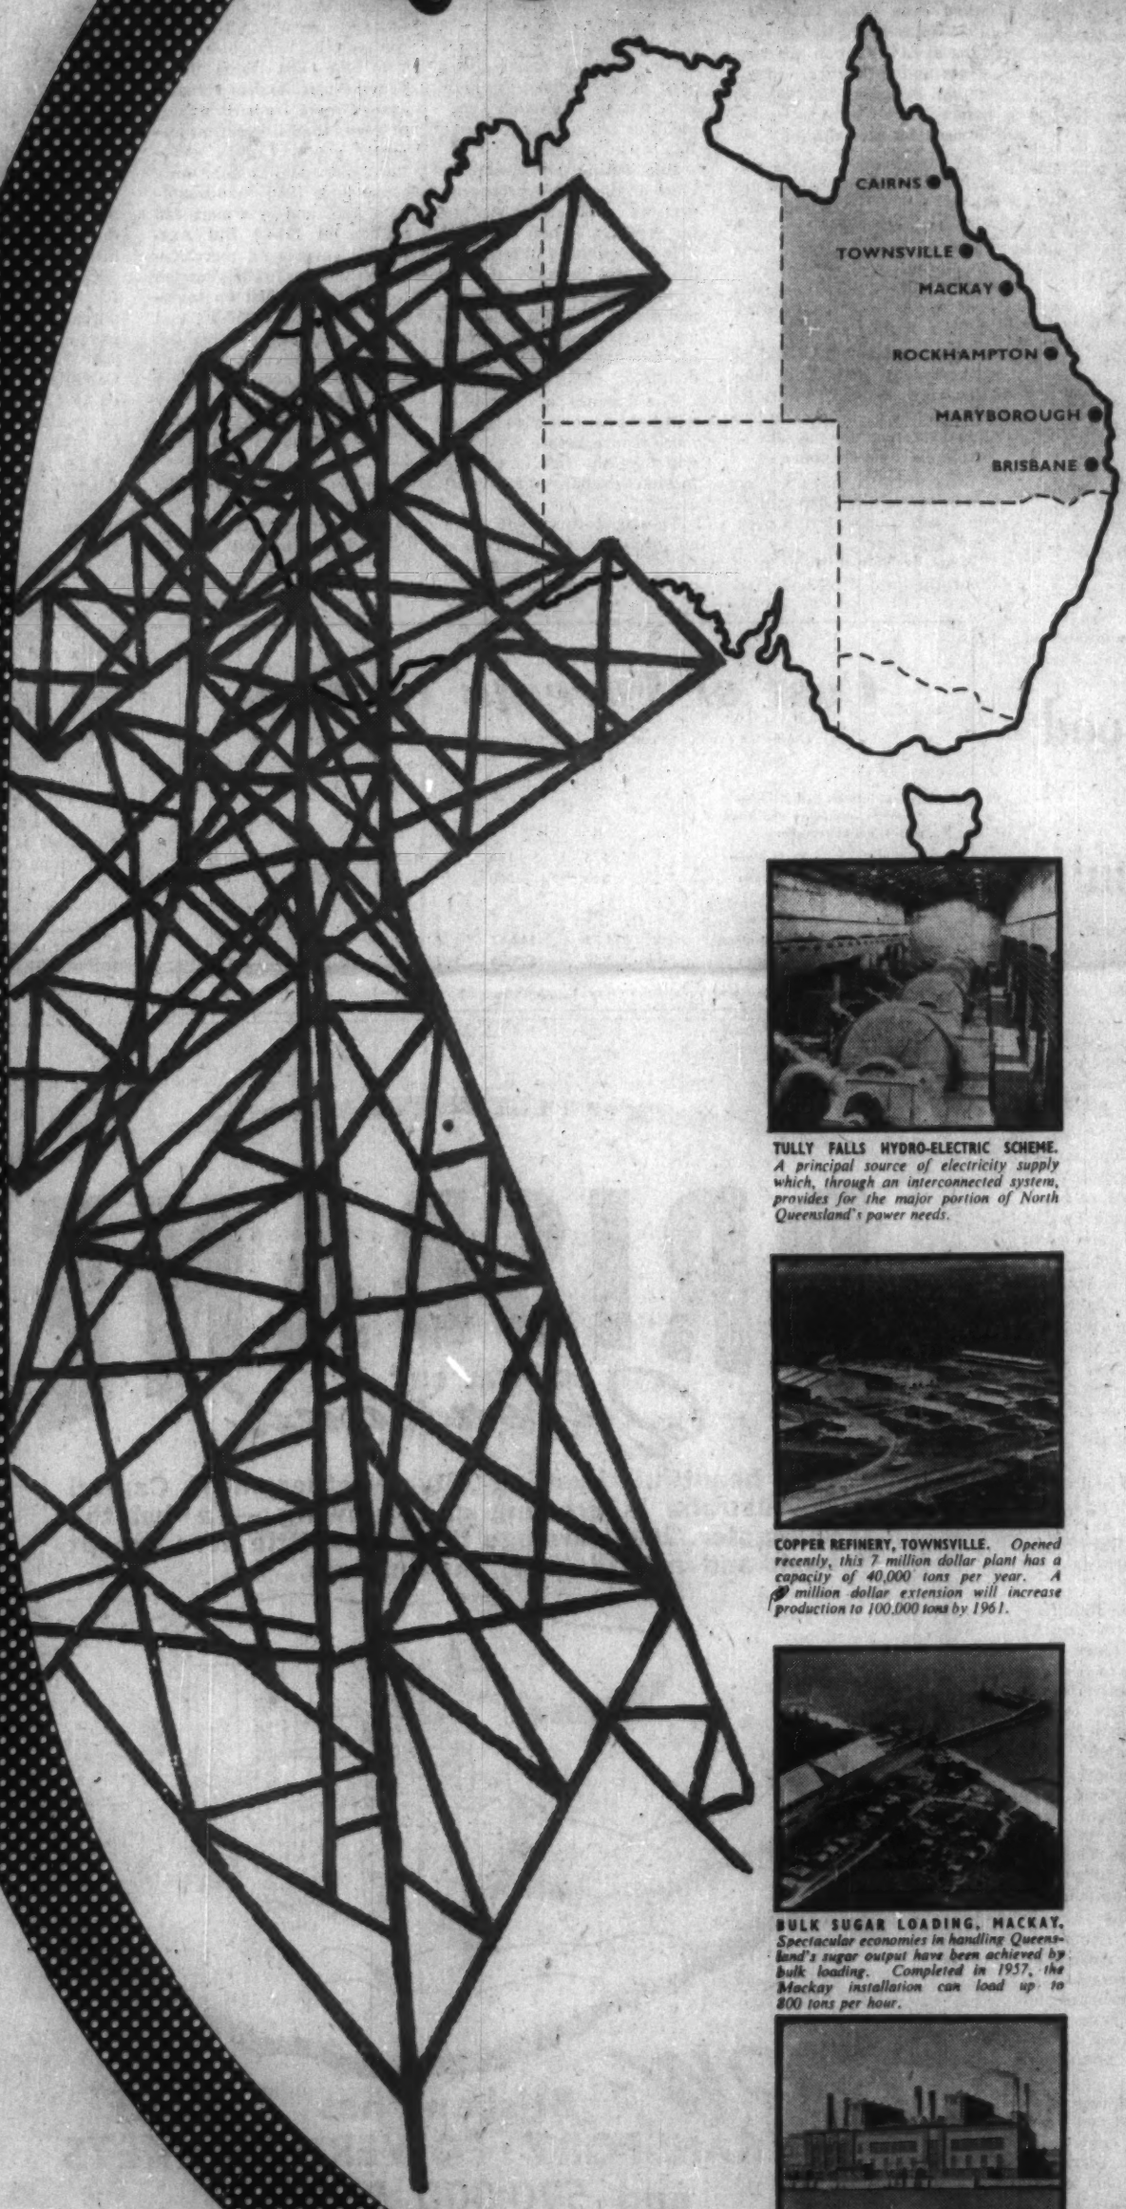
A REWARDING FIELD FOR INVESTMENT!

BRISBANE — City of opportunity

Write to: Mr. J. JOHNSTONE, SECONDARY INDUSTRIES LIAISON OFFICER, CITY HALL, BRISBANE, QUEENSLAND

QUEENSLAND

is backed by a bold, far-sighted program of electrical development



Queensland today is well served with electric power. The people have power for their homes, their commerce, their industry. They have power, too, with which to welcome new settlers, new capital, new enterprises.

An official policy of decentralisation has been made possible by the wide distribution of power resources throughout the State, resulting in an ever-increasing demand for electric power from many widely-separated, prosperous, and rapidly-growing centres.

Six regional Authorities developing separate, but in some cases interconnected, sources of power serve large provincial centres and rural areas along one thousand miles of coastline from Brisbane to Cairns, while thirty-eight self-contained power stations supply electricity to Queensland's grazing and pastoral districts.

The setting-up of a stable and ample electricity supply on this scale has been a heavy, unremitting task — and the end is not in sight. For Queensland now has entered a period of unprecedented progress which, over the next decade, will require the expenditure of 400 million dollars on further electrical development.

Queensland's constantly-growing, soundly-based electricity supply industry, therefore, is a major factor in the development of those great natural resources which are earning international renown for the State.

With its own vigorous pattern of progress, the power supply industry, in particular, offers an outstanding field for the investment of new capital.

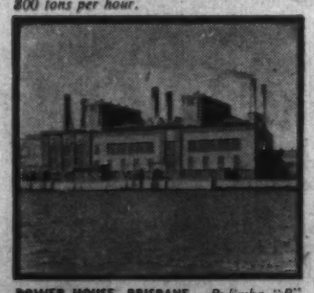
TULLY FALLS HYDRO-ELECTRIC SCHEME. *A principal source of electricity supply which, through an interconnected system, provides for the major portion of North Queensland's power needs.*

COPPER REFINERY, TOWNSVILLE. *Opened recently, this 7 million dollar plant has a capacity of 40,000 tons per year. A 2 million dollar extension will increase production to 100,000 tons by 1961.*

BULK SUGAR LOADING, MACKAY. *Spectacular economies in handling Queensland's sugar output have been achieved by bulk loading. Completed in 1957, the Mackay installation can load up to 800 tons per hour.*

OPEN CUT MINING, MT. MORGAN. *Situated near Rockhampton, the mine has been producing since 1882. To date, 27,592,000 tons of ore have yielded 6,765,000 fine ounces of gold and 249,500 tons of copper.*

TIMBER-GETTING, WIDE BAY DISTRICT. *Massive stands of timber have long been a valuable source of income for this area. Reafforestation, together with modern methods of handling, assures the industry's future.*



POWER HOUSE, BRISBANE. *Bulimba "B" is one of the modern power stations which serve the highly industrialised and heavily populated south-eastern corner of Queensland.*

LUNCH HOUR concerts of orchestral music at Sydney Town Hall attract girls from nearby offices, factories and warehouses. Concerts cost about the price of a movie.

The Arts

Big Export of Talent

By SIR BERNARD HEINZE
Director, the Sydney Conservatorium of Music

For the first 100 or more years of its history the development of material resources left Australia little time for the cultivation of the arts.

The second stage of pioneering began toward the end of the 19th century. **At that time artists, and especially painters and writers,** began to explore and interpret the country which had been opened up, and at least partially tamed, by successive waves of pioneers.

But these were mostly tentative beginnings, marked by individual effort and the support of private benefactors. It is the last 25 years that have seen the most striking advances in cultural activities.

In this period governments have come to realize the importance of supporting, not only Australia's industries, but also those arts on which its status as a civilized nation must ultimately depend.

• Some of the most spectacular developments have taken place in the field of music.

With the establishment of the Australian Broadcasting Commission in 1932, musical activities, scattered and unco-ordinated, began to be systematically organized.

In 1924 regular concerts for schoolchildren were started, and since that time audiences for orchestral concerts have grown so rapidly that the commission, assisted by city councils and state governments, now supports a permanent orchestra in each of the six states.

The year 1947 saw the establishment of youth concerts, which provide for young people between the ages of 18 and 25, and thus sustain that interest in music awakened by the children's concerts.

The Musica Viva Society, founded in 1946 and supported by subscribers, sponsors chamber music concerts by visiting and resident groups.

It is the policy of the Elizabethan Theatre Trust, which was established in 1954, to present not only drama, but also an annual season of opera.

The largest and most sustained influence on public taste has been felt in the field of musical education.

With the formation of the Ormond chair of music in the Melbourne University, and the Elder chair in the University of Adelaide in the 1890s serious education began.

The State Conservatorium of N.S.W., with its first director, Henri Verbruggen, opened its doors to students during World War I. Today it has, with its branch conservatorium in Newcastle, nearly 3,000 students.

• Until the establishment of the Australian Elizabethan Theatre Trust the Australian theatre had no permanent group of professional players.

It is hoped that the Elizabethan Theatre Trust will build up a regular theatrical following, and that an interest in the theatre will be promoted outside the main cities by country tours.

This year the trust, in co-operation with the University of New South Wales and the A.B.C. opened the National Institute of Dramatic Art, which is housed in the university, and which provides a two-year diploma course in acting for selected students, who are drawn from all states of the Commonwealth.

• One of the most vigorous activities of Australian artistic life is painting.

Painters are ahead of both writers and composers (of whom Australia has relatively few) in developing characteristic styles and schools.

For some years competitions have been held for portrait and landscape painting, and more recently the Blake Prize has been established as an annual award for the best paintings and sculptures on religious subjects.

• In literature Australia, like any young country, made tentative and imitative beginnings. If we have not yet produced a writer of great stature we are building up a body of literature which is neither merely derivative, nor, as so much early Australian writing was, merely local, even parochial.

Writers are now officially encouraged in their efforts by the Commonwealth Literary Fund, through which the Commonwealth government supports selected writers.

Recently the government increased its grant to the fund from £12,000 to £20,000 annually.

As yet there is no chair of Australian literature in any Australian university, but a private bequest has made possible the establishment of a course in Australian Literature at the University of Melbourne.

Perhaps the most important step in the encouragement of the arts in Australia at the academic level was the formation of the Humanities Research Council.

After a general meeting held in 1958, the council issued a report in which were made many recommendations concerning the teaching of humanities in schools and universities.

The council also dealt briefly with the position of the arts outside the universities, and recommended that the Commonwealth government follow the example of the Canadian government, and appoint a committee of enquiry "to consider the public facilities provided in Australia for the encouragement of music, drama, literature and art".

The council has already been responsible for the publication of books and monographs of academic importance, and issues a report on the various research projects being undertaken in universities, and on publications by university teachers.

While all these efforts to encourage music, theatre, art and literature have already led to progress in these fields, a great deal remains to be done.

Perhaps Australia's greatest single problem is that, along with its primary products, it exports talent.

Too many young people, in particular those with theatrical and musical talent, leave Australia to gain experience overseas, and do not return to use this experience in their own country.

It is to be hoped that with the facilities now provided for regular employment by the Australian Broadcasting Commission, and for training by the Elizabethan Theatre Trust and the National Institute of Dramatic Art we will be able to retain our own permanent groups of artists.

An added incentive to remain in Australia will be the completion of the Sydney Opera House, which, indeed, for many people, stands as an exciting symbol of our artistic development. Its adventurous design may well be regarded as a happy prediction of our future cultural prosperity.

State-Run Schools In Tight Control

By Prof. W. H. FREDERICK

Australian education is basically in the British tradition. In recent years it has been much influenced by North American educational thought and practice.

But in its most characteristic feature, the highly centralized administration and control of its government-run schools, it is in sharp contrast with both British and U. S. systems.

The administrative control is by each state. This system dates from a Victorian Act of 1872, making education free, compulsory and secular.

Other states followed Victoria's example.

Since 1947, Queensland and N.S.W. have made some inroads on centralized administration by setting up educational districts with area or regional directors.

The pattern varies slightly from state to state, but broadly the provision is for primary schools (5 to 11 or 13 years), high schools, and technical schools.

From the early days in each state, one-teacher primary schools were successfully maintained in country districts. The policy is now to "consolidate" wherever population warrants it, using buses to bring pupils to a "pool" school strategically located.

The needs of children in very remote districts have been long catered for by correspondence courses and, since 1930, by educational broadcasts.

Secondary schools, many of which are co-educational, tend to be academic or technical in emphasis.

On the whole the Australian tradition has been against screened entry though New South Wales, and to some extent other states, have always maintained a certain number of selective high schools.

The statutory school-leaving age in four states is still only 14 years. But in N.S.W. it is 15 years and in Tasmania 16 years.

The states entered the field of secondary education after 1900.

Prior to this, secondary schools were conducted by the churches and by private individuals.

With the rapid development of state secondary schools, many of the smaller independent schools went out of existence, but others, strong in their traditions, and in the loyalty of their alumni, prospered and grew.

The Roman Catholic church today maintains its own nationwide system of primary and secondary schools with enrolment of about 350,000 children, or 1/5 of the total school enrolment for the Commonwealth.

Most of the independent Protestant schools (generally called "grammar schools" or "colleges") have boarding establishments and retain a good many of the characteristics of the English boarding school.

They are glad to accept pupils on government scholarships, but, like the Roman Catholic schools, receive no direct government assistance, and must therefore charge fees.

Fees tend to range between £35 and £55 per term for day boys and between £120 and £160 per term for boarders.

Almost a third of all secondary school children in Australia attend non-government schools. The independent schools that are referred to as "public" (in the English sense) enjoy very great prestige and have long waiting lists.

Of eight-year-old Australian children more than three quarters are in government schools but of 17-year-olds only about half are in government schools.

Largely owing to the fraternization of principals and teachers in conferences and on committees, relations between government and non-government schools are of the friendliest.

Each Australian state has its own system of public examinations, mostly controlled and supervised by boards acting for the universities.

Matriculation requirements vary from state to state.

The tendency for these requirements to dictate what is taught at lower levels in the secondary schools is still present, but a liberalization of curriculum has occurred in recent years as the number of pupils of non-university quality staying on longer at school has increased.

At present, thought is being given to possible changes in the system of examinations.

How, without loss of standards, to bring some sort of success within the reach of all remains a problem for Australia as for other countries.

New South Wales, Tasmania and Victoria have each experimented with accrediting. The Victorian system, introduced in 1917, has steadily expanded. "Approved" schools are granted the right to award certificates at Intermediate or Leaving standard on the results of examinations internally conducted.

For a time, prior to 1944, students from accredited schools were accepted by the University of Melbourne without external examination.

The following educational problems confront Australia — as they confront many other countries:

• How to provide enough accommodation for the tidal wave of pupils moving on to the secondary schools. (20,000 additional children must somehow be provided for in 1960.)

• How to recruit, qualify and train enough teachers to reduce the size of classes. (In 1958, 45% of classes in Victorian high schools had over 40 pupils. Many teachers in all states are untrained and inadequately qualified.)

• How to discover, hold and educate to capacity the cleverest pupils. (Only 4% of any age-bracket in Australia attend a University. For every one who attends there are probably at least two of equal merit who don't.)

• How to balance intellectual and social education, scholarship and experience.

• How to arrange for the continuance of general education as long as possible against the pressures for early vocational specialization.

• How to meet the accelerating demand for guidance and counseling services in the schools.

• How to arrive at reasonable agreement about educational goals so that the program and procedures of schools can be determined with greater conviction.

There is vitality in the schools. There is also evidence of the development of what Australia has hitherto lacked — a public conscience about education and increasing readiness on the part of citizens to identify themselves with its purposes.

AUSTRALIA

Asian Influences Shape Modern Foreign Policy

By FREDERICK HOWARD

Most nations evolve their foreign policies by necessity, not choice. Australia's foreign policy is a late growth, still not fully rounded, but certain to be shaped from now on by Asian rather than by Western European events.

In the first 100 years of white settlement in Australia, the supremacy of the British Navy allowed this community to ignore international affairs.

There were brief flurries of concern in the 1850s, and later, over the possibility that Czarist Russia might look acquisitively toward the Southwest Pacific.

In 1883, a similar sensitiveness to the expansion of the German colonial empire led the Queensland government to annex that part of New Guinea which is now the Australian territory of Papua.

Queensland was one of what were then the six unfederated Australian colonies.

The British government at first repudiated Queensland's planting of the Union Jack in New Guinea. But the strength of public feeling in Australia forced recognition of the act. It also gave impetus to the movement for federation.

When the Australian colonies became a federation of six states in 1901, a Department of External Affairs was set up — the first department in any dominion government to bear this description.

But it was yet too soon for a foreign policy. When they looked toward the Asian coastlines to their north, Australians still had the comforting sight of gunboats — mostly British.

The External Affairs Department disappeared as a separate entity in 1916. Although it was revived in 1921 to handle business with the League of Nations, its growth as the instrument of an articulate, national policy on foreign affairs was slow until the beginning of World War II. But the steps taken at that time pointed to the big change that was coming.

Australia's first diplomatic post in a foreign country was the legation set up in Washington in 1939, in charge of the present Minister for External Affairs, R. G. Casey. The second major foreign appointment was to Japan, in 1940.

From this moment onward, events sharpened and changed the thinking of Australians on world affairs. All the factors that are shaping today's national policy can be traced to the experiences of 1941-48.

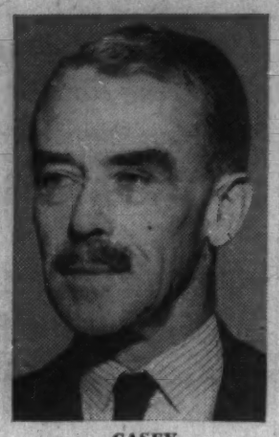
First among these was the eclipse of British naval power in South-East Asia when the Japanese sank the warships "Renown" and "Prince of Wales" off the Malayan coast.

It was a few days after this, and before the fall of Singapore confirmed the ending of an imperial era, that the Australian prime minister, the late John Curtin, appealed for U. S. aid in words suggesting an abrupt switch in Commonwealth relationships.

"I make it quite clear," he declared, "that Australia looks to America, free of any pangs as to our traditional links of kinship with the United Kingdom. We know the problems that the United Kingdom faces . . . But we know, too, that Australia can go and Britain still hold on. We are therefore determined that Australia shall not go, and we shall exert all our energies toward a shaping of a plan, with the United States as its keystone, which will give to our country some confidence of being able to hold out until the tide of battle swings against the enemy."

Those who read this as notice of a clean break with Britain were, of course, wrong.

Ties of kinship have since reasserted much of their old strength. But not all. The horizon toward Asia, as Australians see it, is no longer pleasantly tinged with the smoke of European gunboats — mostly British.



CASEY

John Curtin's phrase — "the shaping of a plan, with the United States as its keystone" — gives the essence of Australia's postwar foreign policy.

This policy has not produced an association in defence similar to that between Canada and the U. S. The U. S. has retained no forces in any of the bases set up in Australia and New Guinea during World War II.

There was a moment, early in the peace, when they showed interest in holding the big fleet harbor and air fields on Manus Island, off the New Guinea coast. But while the Australian Labor government of the time raised questions of reciprocal rights at U. S. bases, Washington revised its plans for the Southwest Pacific.

Since then, Australia has developed links with the U. S. through military support for U. N. action in Korea, through regional security pacts and — less enthusiastically—through endorsement of the U. S. line of non-recognition of the Communist regime in China.

The first of the regional pacts was ANZUS — Australia, New Zealand, U. S. — designed in 1951 to allay Australian criticism of what was then regarded as too "soft" a peace treaty with Japan.

ANZUS commits its member to nothing more than "consultation" if any of them is threatened by aggression.

The second pact, SEATO, is an embryonic NATO in which the U. S., the U. K., France, Australia and New Zealand are ranged with three Asian countries — Philippines, Thailand, and Pakistan — to resist Communist aggression or infiltration in South-East Asia.

Apart from these moves to strengthen familiar ties, Australian foreign policy has made bids for new friendships in Asia.

Australia supported the claims of Indonesians in their struggle against Dutch rule, in 1946-48. But the gratified response of the Indonesians ebbed when it later appeared that Australia would oppose the inclusion of Dutch New Guinea in the Indonesian Republic.

Canberra's official explanation is that the primitive village communities in the adjoining Dutch and Australian territories in New Guinea should be administered as trustee areas until they are ready for self-determination. But in Jakarta this is seen as a flimsy, inconsistent argument.

Australians are increasingly aware that their preference for the Dutch as neighboring administrators in New Guinea, and their barriers against non-European migration to Australia, are resented in Asia.

Their foreign policy now makes a considerable effort to reduce this resentment.

The Immigration Act is being more and more interpreted with discretion, admitting a trickle of those Asians with the desire and the means to enter.

Aid for Asia through the Colombo Plan is generally approved, particularly when it offers technical training to Asians in Australia. External Affairs Minister Casey devotes an appreciable amount of his time to rounds of Asian calls to keep new friendships in repair.

Research Aids Farmers

By DR. F. W. G. WHITE
Chairman, Commonwealth Scientific and Industrial Research Organization

Australia's national scientific research body has a great deal in common with its sister organization, the National Research Council in Canada, but there are some important differences.

The histories of the two organizations show striking parallels.

The N.R.C. commenced research on its own account in 1924, although it had operated as an integrating and fund disbursing body for some years previously.

The Commonwealth Scientific and Industrial Research Organization, then called the Council for Scientific and Industrial Research, was founded shortly afterward in 1926. Both bodies grew steadily in size and stature before the war, and have expanded more rapidly since the war.

The interests of the two organizations are by no means identical. C.S.I.R.O. spreads its interest over the whole field of natural sciences, covering the activities of both primary and secondary industries, but eschewing medical research and atomic energy research.

Among C.S.I.R.O.'s major activities are the study of animal and plant problems, soils, fisheries and wildlife, all of which, in Canada, are the responsibility of bodies outside the N.R.C. (The N.R.C. does, however, make grants and award fellowships for medical research.)

C.S.I.R.O., in its first decade, concentrated almost entirely on agricultural research.

The first three divisions founded were those of plant industry, animal health and production and entomology. Some notable successes were achieved, particularly in the treatment of serious diseases of livestock.

The division of forest products showed that Australian native timbers could be used for many different purposes, including papermaking. The foundations were laid for the processes used by the big paper-making firms now operating in Australia.

Agricultural research continues, and is likely to continue to absorb a major part of the national scientific effort.

Increasing attention has been given to irrigation problems, since increased amounts of irrigation water are becoming available as the Snowy Mountains scheme progresses.

In both the plant and animal fields, the attention of scientists is turning toward the sparsely populated areas in the tropical north of Australia. Postwar research has opened the way for revolutionary changes in land use in the north which could add millions of dollars annually to the national income, chiefly from cattle, vegetable oils, and rice.

As Australia is chronically short of water, means of making more water available for agriculture are under intensive study. Australia is a world leader in research into rainmaking by cloud seeding techniques. Another field of intense study, in which promising results have been achieved, is the restriction of evaporation of water from dams and reservoirs, by the use of surface films.

Research into pure and applied physics and chemistry is carried out at two major establishments, the national standards laboratory in Sydney, and the chemical research laboratories in Melbourne, each housing a group of three major divisions.

The N.R.C. and C.S.I.R.O. each have approximately the same net annual revenue, of the order of $20 million. But, whereas the N.R.C. uses a great deal of its funds for grants-in-aid to universities and for other purposes, nearly all of C.S.I.R.O.'s funds are devoted to its own research, the universities getting their research funds from other sources.

As a result, C.S.I.R.O. is a considerably larger organization, with a total staff of 4,000, compared with the N.R.C. staff of 2,400. C.S.I.R.O. does not have anything like the N.R.C.'s post-doctorate fellowship scheme, but does award 60 scholarships a year to allow graduates to proceed to research degrees in Australian and overseas universities.

C.S.I.R.O. gives limited financial assistance to industrial research associations and makes only a few minor grants-in-aid to the universities.

C.S.I.R.O. is more widely dispersed than the N.R.C., both in scientific interest and geographical location. The organization has major laboratories in five big cities, and smaller establishments in a dozen cities and country centres. At the present time it maintains a steady, healthy growth rate, and it seems likely to play an increasingly important part in the economy of Australia for a long time to come.

MURRAY RIVER, border of Victoria and New South Wales for most of its length, has been harnessed for irrigation and hydro power at the Hume Dam near Albury, Victoria. Here, a new settler attends his vines at Coomealla.

Immigration

Already Pays Dividends

By HON. A. R. DOWNER
Australian Minister for Immigration

Since World War II, Australia has developed faster than at any time in its history and that vast expansion is continuing.

The government has decided that for long-range planning purposes, our aim should be a population increase from migration at the rate of 1% of the population each year.

That is the broad aim. It is subject only to the qualification that the yearly programs must be geared realistically to the capacity of industry to employ the newcomers and the country's ability to house them.

On this basis, the intake for each of the past three years was held at 115,000 permanent arrivals. But in the present financial year the program is to recruit 125,000.

Assisted passages will be given to 65,000 and the remainder will pay their own fares.

Australia draws her migrants principally from: the U. K., the Netherlands, Western Germany, Italy, Scandinavian countries, Greece and Austria, where full time migration offices and selection teams operate.

A variety of assisted passage schemes apply by agreements negotiated between the respective governments and in association with the Intergovernmental Committee for European Migration, of which Australia is a member.

The program of migration is determined at the beginning of each financial year.

We do not pluck a number out of the air, throw wide the gates, and hope for the best. The program is related very closely to actual absorptive capacity.

With a war-caused housing shortage, the government has provided hostels and migrant accommodation centres to provide initial shelter with full board until the newcomers can find their own private housing.

The emphasis throughout is upon planning, reception, and after care, and our 1.5 million newcomers have settled in with remarkable smoothness.

The overwhelming majority of the 750,000 increase in the work force since 1947 have been migrants.

Between 1946 and 1958, 29.2% of all male workers were skilled tradesmen: it was less than 21% before the migrant influx.

In 1957-58, approximately seven out of every 10 immigrant workers were skilled or semi-skilled.

At least a third of the new houses, flats, offices, hospitals, factories, schools and shops in Australia have been, and are being built by the 50,717 skilled building tradesmen who have arrived since the war.

They include 2,836 foremen, 23,725 carpenters, 9,789 bricklayers, 8,262 painters, 1,496 plasterers, 3,647 plumbers, 186 glaziers, and 776 others, not including electricians.

Migrants have provided 35% of the labor on electric power supply.

In steel, migration has provided 73% of the postwar increase in workers.

In the motor vehicle industry at least 40% of the workers are migrants — nearly 65% at **General Motors** Holdens plant at Fishermen's Bend, Victoria, and 50% at its works at Woodville, South Australia.

In rail and air transport, 68% of the additional postwar workers are migrants.

We have sought as many rural workers as possible, and have brought in 86,000 since January, 1949.

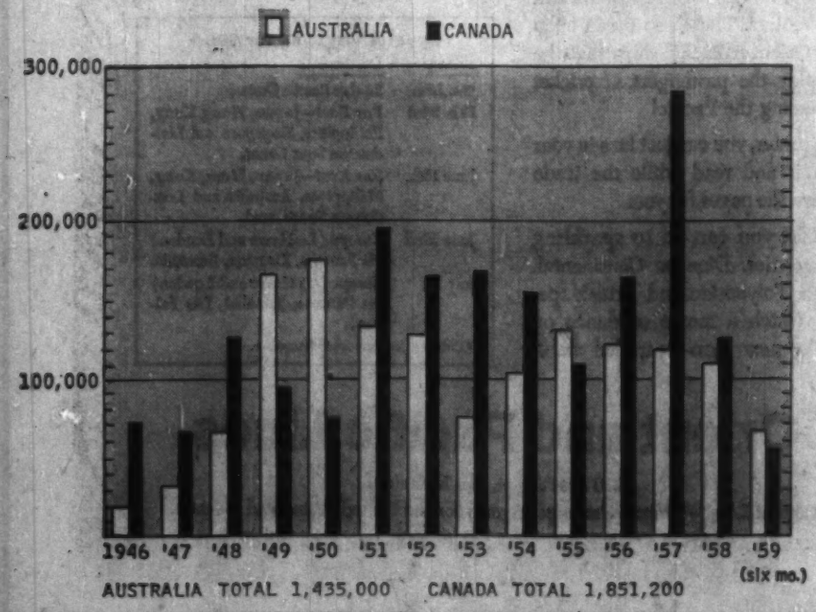
In 1957-58, 2,507 arrived with a background of training in dairying, beef cattle, wheat, wool, sheep, sugar, fruit, vegetables, production timber-getting, fishing and other rural work.

Strengthened by the larger population and by the increased production since the war, Australia now represents a far stronger nation of the free world in the Southern Hemisphere.

It is also a more attractive place for overseas capital and overseas loans.

Already Australia is reaping dividends in accelerated national development, richer material production, and increased potential for future security and prosperity.

Post-War Immigration



AUSTRALIA TOTAL 1,435,000 CANADA TOTAL 1,851,200

Australia Sold On Immigration

In the immediate post-war years the Labor Government did something for Australia which it might not have been possible for anybody else to do.

It sold the Australian people on the need for extensive immigration.

The responsible minister was Arthur Calwell. He bequeathed to Australia, when the Menzies Government came to power in 1949, an immigration program which commands general public support and still continues on the lines which he laid down.

Seventy percent of the new immigrant workers since World War II have been skilled tradesmen, and they have settled into jobs with hardly any ructions.

The record of disputes with local trade unions, or national unions for that matter, is quite as good as in Canada.

In both countries professional associations have erected more barriers than trade unions.

The total intake of migrants to Australia between October, 1945, and October, 1959, is nearly a million and a half.

Less than half of them — about 48% — were from the U. K. Nearly 200,000 were from Italy and more than 100,000 from Holland. The remainder came from the same wide selection of European countries as Canada's immigrants.

Just over 52% of all arrivals had "assisted passages". This proposition was the same for the British and the Europeans.

They say that the hydro project in the Snowy Mountains would have been quite impossible without the European immigrants.

The large inflow to the cities strained the housing resources but then it supplied 35% of the labor for housebuilding.

Almost three-quarters of the increase in the Australian labor force since the war has consisted of New Australians.

In general the impact of the European immigrants on Australia has been very much the same as in Canada.

Little cafes are appearing of a kind that were not there before. New entertainments are getting patronage.

In every state and every city the immigrants are having their influence — and making possible the expansion which Australia is enjoying. It is manpower, not capital, say the authorities, which is the real limiting factor.

Since the war the Australian population has increased by about 33%, compared with an increase of over 40% in Canada.

The difference is due to the natural increase. It has been high in Canada, while Australian birth rates have been lower.

Consequently immigration has been even more important to Australia. The natural increase over the post - war years has averaged around 1.4% per year. Net immigration, as calculated by the Commonwealth Statistician, has been around the 1% mark.

But there is an element of considerable uncertainty in the estimates of emigration which makes comparison with Canada very difficult.

The Canadian statisticians refuse to give anything but a very tentative estimate of the annual emigration from Canada, and they base it on immigration figures from the U. S. and the U. K.

The Australian practice is to count the departures from Australia, and try to distinguish between the "permanent departures" and the "short-term departures".

It appears by no means safe to assume that the Australian official figures are comparable with Canadian estimates.

The most basic difference between Australian and Canadian immigration policy since the war has been in the degree of assistance given by the governments.

It has been the habit in Ottawa to decry the amount of assistance given to immigrants under the Australian arrangements.

A British migrant — and in many cases Europeans too — can get the fare paid out to Australia for his whole family by putting down only £10 each for himself and his wife. He can, if he wants to, live in a government hostel at very cheap rates for at least two years and he can pretty well expect to be found a job.

"Mollycoddling", Canadian officials and governments have said. "That's not the way to make hardy and enterprising immigrants."

The hostel question is a vexed and controversial one.

But there doesn't seem to be any fundamental difference in doctrine or theory between the Australian approach and the Canadian one.

It's a matter of practical needs. And the simple fact is that, when a family moves 10,000 mi. to a new country it is up against a very different proposition from the family which merely hops across the Atlantic.

The advantage Canada enjoys in being so much nearer the preferred countries of emigration — in U. K. and Europe — is greatly envied here.

There is a measure of rivalry between us in our attempts to attract the most suitable emigrants. Canada's relative nearness gives us a head start. Australia has been trying — not unsuccessfully — to make up for it.

Only last month, Immigration Minister Downer warned the House of Representatives of two new difficulties to be faced in trying to meet the immigration target for the present year.

The government has set out to bring in 125,000 people in the fiscal year from July to the end of next June. This is higher than last year's 116,000 and well over the 1% of population per year which has been set as the general long-term goal.

The two difficulties Mr. Downer mentioned were:

- **The increase in prosperity** in the U. K. and Europe.
- **The fact that Canada** has again entered the market.

Migrant Hostel

Practical, Not Ideal

In one of the outer suburbs of Melbourne, the Americans built a wartime camp of Nissen huts. It is now known as the Nunawading Migrant Hostel.

It is not an attractive place but it is an extraordinarily happy one. That, in one way, is the problem.

Altogether the Commonwealth government runs 30 of these hostels in five of the states. There are 15 in New South Wales, nine in Victoria, three in South Australia, and one each in Western Australia, Queensland and the Capital Territory (Canberra).

Nowadays the government is gently but firmly insisting on putting a term to the stay of the immigrants in hostels.

The idea of turning people into permanent hostel-dwellers is one of the things which has made Canadian authorities so rigid in opposition to any kind of hostel set-up.

It can happen. It is a problem. This the Australian authorities admit. But after all their experience it does not bulk as an overwhelmingly large problem.

The manager of Nunawading didn't minimize it but he has never had more than a tiny minority of "stickers", who won't leave.

The attractions of the hostel for most immigrants seem to be twofold.

It can become — in the right hands, and with the right kind of people — a very cheerful, merry community. For those who like that sort of thing, it must have some of the appeal of the Butlin Holiday Camps in U. K.

All this appeals to some people. It must repel many others.

But it is inescapable. Two rooms, with thin partitions that transmit all the sounds from the neighbors, are the allowance for a family—with an extra room, at the discretion of the manager, if the children are of different sexes and sufficiently advanced age.

A man can keep his family — a wife and two children — for about £11 a week. The minimum basic wage, set by law under Commonwealth awards, is £14-3-0 in Sydney, £13-15-0 in Melbourne. But nobody gets the basic minimum. Even the most unskilled trades have got a "margin" for something.

The real ace for the hostel-dwellers is the provision of free day care for all the children. Those of school age attend classes in the place. And pre-school ages have a nursery school supervised by qualified people, and by all accounts very well run.

Mother will never be so free, once she has to run a house of her own. Nearly all the mothers take advantage of this and go to work.

Thus, with two incomes coming in, the hostel fees become moderate and a couple can save more than they ever will again while their family is growing up.

An Englishwoman of several years stay in Australia now runs the linen and housekeeping for Nunawading. She lived there for more than two years with her family when she first got to Australia. Now she has a home of her own. She's been through it all.

Her advice to the newcomers, is to take full advantage of the whole two years, which is now the permitted limit of hostel stay.

She said:

"I don't like to see the young families moving out before that, to set up house when they have got so little saved. I advise them both to keep working for as long as they can while their children are looked after in the hostel. Then they've got enough to get a decent house, and they have got something behind them."

This may not have been the idea when the hostel regulations were laid down but obviously it is the way a good many young couples get themselves established in Australia.

The Australians treat the whole business as one of practical choice, between mixed goods and mixed evils.

Primarily the Australians were, in effect, bound to provide accommodation for their post-war immigrants, if they were going to bring them in at all.

This was partly because of the much greater distance, with the economic necessity of a long sea voyage, rather than a quick air trip.

The plan, which works well in Canada, of urging the breadwinner to come out alone first, is impracticable in these conditions. Men don't ordinarily take a six weeks' voyage into the unknown, with another six weeks' to get back if things don't work out, leaving their families to follow on the chance that all goes well.

And the housing situation — in the earlier years more than now — was so tight that you couldn't throw immigrants in such numbers onto the market to fend for themselves.

Even now many of them acquire houses only by building them with their own hands.

In the circumstances, the plan works. Nobody pretends it is ideal. But it has brought Australia the immigrants it needed and probably as large a proportion of them have settled happily into Australian life — through hostels — as the New Canadians have — without hostels.

Mt. Isa Project Boosts Base Metal Production

By J. M. RAYNER, Director, Australian Bureau of Mineral Resources, Geology and Geophysics.

• **Lead and zinc: In the period 1946 - 1957 mine production of lead and zinc** rose almost continuously

With the emergence of excess supplies of lead and zinc on world markets the production trend was reversed in 1958. Production in 1959 will be at still lower levels when the full effect of the reduced activity at the major mines will be in evidence. As a result of lower prices some smaller producers have ceased operations.

The introduction of quotas on lead and zinc by the U. S. government from October, 1958, reduced the total intake of Australian lead into that country by 50% of the 1957 level. (1957 was the last year of the five-year base period on which quotas were determined.)

Australian exports of zinc to the U. S. had been relatively small in the base period so they were given no specific quota. To sell zinc in the U. S. today, Australia must compete with countries covered by the "All Other Countries" quota.

What the immediate future holds remains to be seen. Certainly the outlook for zinc appears to be much more favorable than that for lead. At present there would be no difficulty in disposing of available zinc production. From the Australian viewpoint, the return to unrestricted production is of great importance. But, with the U. S. market for the time being virtually isolated, the scope for increasing sales in the immediate future appears to be limited at the present level of prices.

A development program at Mt. Isa, Queensland, will greatly increase capacity for mine production. Current mine production rates are 53,000 tons of lead and 15,000 tons of zinc. The program now in hand could well mean that eventually these levels will be doubled.

• **Copper:** Australia's main development in copper production in recent years was at Mt. Isa, where the mine output is now slightly above 60,000 tons annually.

The first stage of a long-term development program was completed there in mid-1959, and Australia can look for a further increased output from this centre in the future.

The most recent significant development in Australia was the opening this year, at Townsville, Queensland, of a new electrolytic refinery to treat blister copper from Mt. Isa. This addition to the existing refineries has increased copper refining capacity to 40,000 tons. The annual capacity of the Townsville plant is to be increased to 60,000 tons immediately, and eventually to 100,000 tons.

Although mine production of copper at Mt. Isa is now above smelter capacity, and concentrates are being exported at the rate of 60,000 tons annually, principally to Japan, the position should alter with the growth of smelter capacity in the next 12 months.

• **Tin:** Tin production has been maintained at about 2,000 tons annually in recent years, and virtually all of this is smelted locally. Smelting capacity is well in excess of concentrate production.

Uranium Producers

Seek New Sources Of Uranium Oxide

By A. D. McKNIGHT, Executive Commissioner, Australian Atomic Energy Commission

Australia has made its contribution to world uranium supplies since it was first recognized as strategic material.

Undertaken as urgent governmental projects, the fields at Rum Jungle (Northern Territory) and Radium Hill, (South Australia) were first developed to supply uranium oxide to the Combined Development Agency, the purchasing authority established by the U. K. and the U. S.

With encouragement from the Commonwealth government, private mining companies have since opened up new fields, and total annual production is now about 1,000 tons of oxide.

Besides Rum Jungle and Radium Hill, the main fields now operating are at Mary Kathleen (northwest Queensland), and El Sharana and South Alligator River (Northern Territory).

The Radium Hill field is owned and operated by the South Australian state government, which has contracts to supply oxide to the Combined Development Agency.

The other field supplying the agency, Rum Jungle, is

Mining

Developing the North

By DR. H. G. RAGGATT, C.B.E., Secretary, Australian Department of National Development

The history of mineral discovery in Australia shows several distinct phases.

In the latter half of the 19th century discoveries of major importance followed fast upon one another:

• **Gold** in the eastern states from 1851 onward.

• **Tin** at Mt. Bischoff (Tasmania) in 1871.

• **Silver-lead-zinc** at Broken Hill (New South Wales) in 1883.

• **Copper** at Mt. Lyell (Tasmania) in 1890.

• **Gold** at Coolgardie and Kalgoorlie (Western Australia) in 1892 and 1893.

From 1893 onward the rate of discovery diminished, so that in the period between the two World Wars, the only major discoveries were lead-zinc (and subsequently copper) at Mt. Isa (Queensland) and tin at Aberfoyle (Tasmania).

In recent years, however, exploration and development have resulted in some remarkable discoveries:

- **Extensive deposits of bauxite** in northern Australia.
- **Development of Mt. Isa** as the major copper producer in Australia.
- **Discovery of major uranium** deposits at Rum Jungle and Mary Kathleen.
- **Iron ore deposits,** whose importance is at present being evaluated, in northern Australia and in Tasmania.

The increase in the rate of discovery in the years following World War II resulted from four factors:

• **Liberalization** of mining taxation.

• **High prices** for metals and minerals.

• **Growth in domestic demand.**

• **Increased use** of scientific methods in mineral exploration.

Practically all the major mineral developments in Australia in recent years have been made in the tropical North, where more and more communities are being established to develop mineral deposits in areas where it was once thought that men of European stock could not live and work efficiently for more than short periods of time.

In line with the postwar expansion of the Australian economy, the mineral industry has experienced a period of almost continuous growth.

The volume of output has continuously increased, from an index of 97 in 1948 to 159 in 1958.

The output of the mineral industry comprises approximately 3% of the total output of goods and services in Australia.

In terms of exports, however, primary mineral production, including gold, has accounted for about 10% of Australia's total exports until the recent sharp fall in world prices of a number of minerals.

By value, coal accounts for about 25% of the annual total, the products of the lead-zinc industry another 25%, iron and steel about 15%, copper about 10% and gold about 7%. The balance, about 18%, is represented by a wide range of the raw materials of industry — some 80 in number.

The most notable deficiencies are petroleum and rock phosphate, the former vital to all sectors of the community, the latter a necessity for Australia's pastoral and agricultural industries.

With the development of scientific exploration techniques and improved access and supply to remote areas, there is reason to be optimistic that more outcropping and hidden ore bodies will be located to further broaden the base of the Australian industry.

Since the discovery of the Broken Hill lead-zinc-silver lode in 1883, Australia has been a leading producer of these metals. The subsequent discovery and development of Mt. Isa, together with the contribution from other smaller lead-zinc mines, has now placed Australia in the position of leading world producer of lead and third of zinc.

The lead-zinc industry is also the major earner of export income within the mineral industry. Despite current marketing difficulties, developments now proposed should further consolidate the position of the Australian industry in the world picture.

Recently Australia has emerged as a net exporter of copper as a result of the developments at Mt. Isa, which promises to be one of the largest underground copper mines in the world. Further increases in production in the years ahead, mainly from Mt. Isa, and the corresponding expansion of refining capacity are very significant developments indeed.

Continued demands for increased steel production emphasize the need for adequate reserves of iron ore.

The industry today is based on the high grade reserves of the Middleback Ranges area in South Australia, and Yampi Sound, Western Australia.

By world standards proved reserves of high grade ore are not large and increased attention is being given to the search for new reserves and the beneficiation of lower grade ores.

Manganese ore is of vital importance to the iron and steel industry throughout the world. Until recently Australian reserves were considered to be small in relation to the expanding requirements of the domestic iron and steel industry. However, within the last three years new deposits have been found in Western Australia and a significant increase in overall reserves has been recorded. Although some of the ore is low-grade on present standards for metallurgical purposes, it will undoubtedly be required in the future.

The sharp decline in world prices for wolfram, scheelite and rutile in recent years has greatly affected Australian production in quantity and value. Nevertheless, Australia has maintained its position as the leading producer of rutile and zircon in the free world.

Domestic tin production is not sufficient to meet all requirements. Imports will be further increased with the expansion of tinplate capacity at Port Kembla. Proved reserves of tin are limited and in the next decade they will be greatly depleted. The possibilities of finding new deposits are not, however, exhausted.

Faced with a fixed price for their product, Australian gold producers have done well to maintain production in the face of rising costs at just over one million ounces annually. The subsidy paid by the Commonwealth on production, under certain conditions, has been a contributing factor and it appears likely that the current level of output will be maintained.

Reserves are largely governed by cost in relation to price and any rise in price would at once increase reserves and lead to a rejuvenation of production.

The development of the blue asbestos deposits at Wittenoom, Western Australia, has proceeded vigorously in recent years and with further developments now in hand the export income of this industry will exceed £1.5 million ($3.2 million) a year.

Base Metals

	Est. 1959 Output	Domestic Consumption ('000 long tons)	Available for Export

Tin	2	3.6	—1.6 (import)

Pacific Travel a Millionaire's Hobby? Not Any More!

Today you can travel to Australia or the Far East on the luxurious new Orient & Pacific Lines — and spend less than you would at a resort here at home!

Orient & Pacific liners are the largest and fastest on the Pacific.

You can sail to Australia, New Zealand, Fiji, Japan, Hong Kong and the Philippines on Orient & Pacific—enjoy superb British service—*and spend less than you would at a resort here at home.* A marvellous thought.

Hard to believe? A voyage to the South Pacific and Australia and back on Orient & Pacific Lines starts at $882 intermediate first class. That's only about $24 a day!

Golden Ships

What will your trip be like? Picture yourself on board a golden Orient & Pacific liner.

You can tell immediately that you're in the hands of men who love the sea. The lines of the ship are sleek and clean. Her decks are scrubbed bone white. Brightwork sparkles. And there is more open deck than you'll find on any other ship in the Pacific.

Your stateroom is extraordinarily comfortable. It was decorated by Britain's leading designers. The service is English—cheerful, unobtrusive and never more than sixty seconds away from your call.

Travel in the grand manner

Every golden Orient & Pacific ship has two sunsplashed swimming pools brimming with blue Pacific water. You can play deck tennis, baseball or brush up on your putting.

This is Fiji, one of your ports of call. When you write home describing your trip you'll wish you were a poet.

Ever wanted to watch a cricket match? Grab a cold tankard of English ale and join the rooters. There's so much open deck on Orient & Pacific ships that the officers play the passengers at cricket while crossing the Pacific!

If you prefer, you can just laze in your deck chair and read while the trade winds turn the pages for you.

At night you can go to sparkling cocktail parties. Dine on Continental, American, Polynesian and British specialties. Watch a movie or dance on deck. The new gyro-controlled stabilizers on Orient & Pacific ships make them so steady you won't miss a step.

Three-week South Pacific vacations from $788

As part of its new service, Orient & Pacific makes you an amazing offer—three-week vacations in the South Pacific!

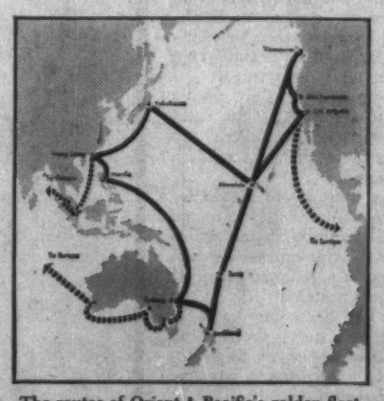
You board a golden Orient & Pacific liner in San Francisco. Then you relax and enjoy sunlit days sailing to Hawaii, the Fiji Islands, New Zealand and Australia. At each port you can roam for bargains, primitive art or glorious snapshots (a movie camera is a sound investment!). Then you *fly* back from Australia, tanned and rested after a double holiday.

You get the best of both worlds, sea and air—*all at round-trip rates!* Tourist fares start at $788 for the entire package.

Around the world two ways

You can go around the world from California *two* ways on the Orient & Pacific. Westward through the Suez Canal or eastward through the Panama Canal.

For more details on travel to the Pacific or around the world on new Orient & Pacific Lines, see your travel agent—or write for free brochure.



The routes of Orient & Pacific's golden fleet.

Special Voyages for 1960

Sailing*	Destination

Scheme Stirs Pride

COOMA (N.S.W.) — This little town 70 mi. south of Canberra has become headquarters for a billion-dollar engineering project which fills Australians with as much pride as the St. Lawrence Seaway, the Ungava ore development and the Kitimat power plant gave Canadians.

It is the headquarters of the Snowy Mountains Hydro-Electric Authority, which since 1951 has been directing a dozen construction camps, building roads, digging tunnels and erecting dams in Australia's highest mountains 50-100 mi. east of here.

They are not big mountains as we know them. They are more like the Laurentians than the Rockies. Their highest peak is Mount Kosciusko, 7,300 ft. But they form the highest part of Australia's dominant natural feature — the Great Dividing Range, which runs right down the east coast of the continent, from the top of Queensland to the State of Victoria.

In the granite gorges to the east the precious water rushes away to the sea, and man gets very little use of it.

But on the west lies much of Australia's productive agricultural land — the wheat-sheep belt, and then the dry, flat region of the sheep and cattle stations.

On these western slopes also are the fruitful irrigated areas, lying along the valleys of the Murrumbidgee and Murray rivers. To these areas the Snowy Mountains scheme will eventually bring almost two million extra acre-feet of water. This will make it possible for the state governments of Victoria and New South Wales to irrigate about 1,000 more farms.

The states will have to build some extra works themselves, but they will get their extra water free from the Snowy Mountains Authority.

The Australian government decided to cover the whole cost of its works out of the power which will be generated.

The conception is as simple as Kitimat. All the available water is to be diverted from its short and unproductive course to the sea and dropped through tunnels westwards to provide both power and irrigation.

But the realization is infinitely more complicated and costly.

Kitimat draws on a reservoir 120 mi. long by 50 mi. wide, created by building one rock-filled dam on the Nechako River. It drops the water 2,600 sheer feet through one 10 mi. tunnel — enough to provide 1.8 million kw at a cost of a few mills per kwh.

To get an idea of this scheme you would need to spend at least three days driving through the mountains over the newly-built roads which have already cost nearly $25 million, staying at the well-equipped construction camps.

There are six new dams, completed or under construction, one power station (Guthega) in operation, another inside the mountain ready to go, and two more being built.

When the scheme is completed — in 1975, it is hoped — its water will be stored behind nine different dams. Its flows will come through five separate tunnels totaling 60 mi. in length and its power will be collected from 11 different power stations.

Last official estimate of the total cost comes to about $800 million but it is out of date. Many informed people think it will not be less than $1,000 million.

All this will control rather less than six million acre-feet of water. (The projected Mica Creek dam on the Columbia will control at least 11 million.)

Total installed capacity will be three million kw. But all these plants will produce only about 5,500 million kwh per year. That's little more than a fifth of their capacity. But they can't run at capacity because there is not enough water. The planned load factor for the whole scheme is about 24%.

The secret of the Snowy scheme's great value for power is that its output will be used to meet the peak loads of the Victoria and New South Wales electricity systems.

We are accustomed in Canada to think of hydro power as being used for base loads. But when it is fitted into a system predominantly dependent on thermal power its role is generally for peaking. In Scotland, for example, the Loch Sloy hydro plant is designed for no more than a 16% load factor — far lower than the Snow Mountains'.

Increasingly North America will be using hydro power for peaking, as we come to depend more and more on thermal and atomic plants, so that these plants can be run at an economical high-load factor.

The great value of the Snowy scheme is to do just this for the electricity systems of the two most populous and industrialized states.

As it takes over their peaks, they will be able to increase the load factor on their coal-fired plants and thus reduce their average cost of production considerably.

By Canadian standards the total output of the scheme may seem pathetically small. In that lies its grandeur.

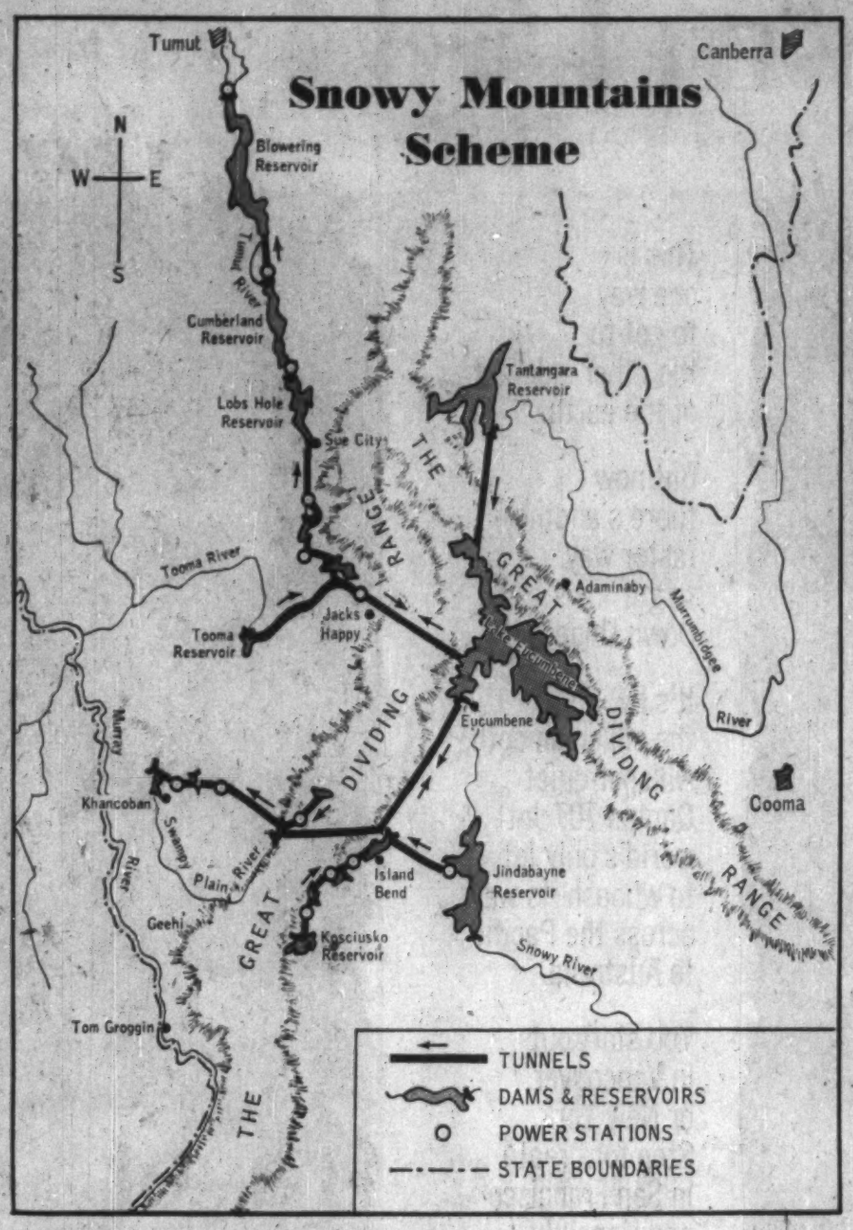
In scale and complexity and ingenuity this undertaking matches almost anything in the world. With some initial help from experts of the U. S. Bureau of Reclamation, Australian engineers, geologists and electricians have brought in contractors from all over the world to realize their dreams. Unfortunately Canada has not been represented.

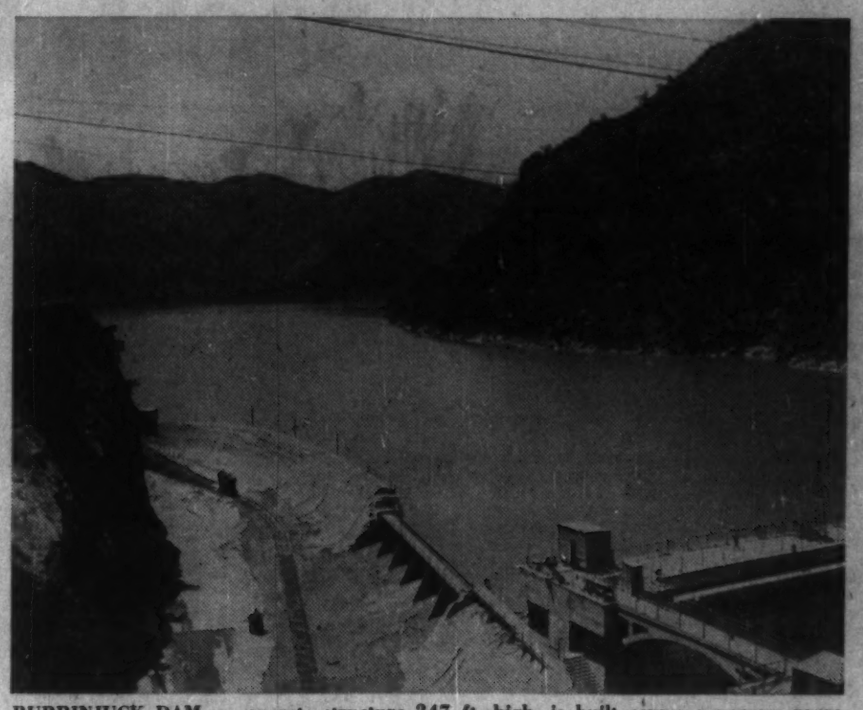
The working force — the men who drive the giant machines and live in the construction camps under snow for months at a time — are nearly all Australians now, but they come from all over the world. About 60% of them are "New Australians" — from Italy and Ireland and Germany and Hungary and half a dozen other countries of Europe.

On the outskirts of this little town of Cooma the Authority has its modern red-brick headquarters.

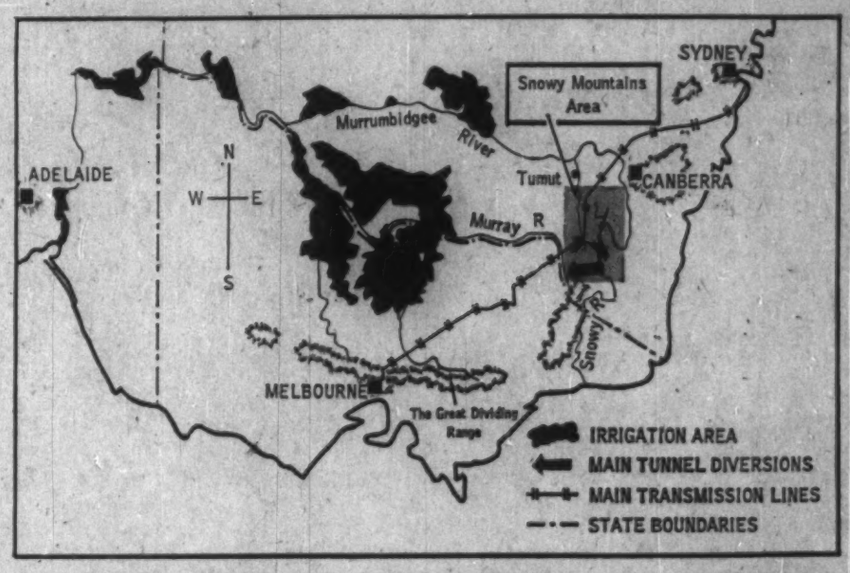
It seems a strange annex to a modest 19th century market town, with its wide streets, lined by frame buildings under corrugated iron roofs with false fronts and cast-iron verandahs. They seem more like some little Ontario town which time has left in a backwater.

But Cooma is in no backwater now.





BURRINJUCK DAM, a concrete structure 247 ft. high, is built across a narrow gorge on the Murrumbidgee River about 32 mi. south of Yass in New South Wales.



Fourth Uranium Producer

(CONTINUED FROM P. 64)

operated on behalf of the Commonwealth government by a private company, **Consolidated Zinc Pty. Ltd.** Production commenced in 1954, and first shipments of oxide from these fields went forward in 1955.

Mining of established deposits at Rum Jungle has now been completed, but reserves of ore in stockpile are sufficient to keep the treatment plant operating at its present capacity for some years.

Exploration and drilling is continuing in the area for possible new deposits.

The other Northern Territory producers — El Sharana and South Alligator River — are owned and operated by private companies.

Both have contracts to supply oxide to the U. K. Atomic Energy Authority.

A point of interest is that the treatment plant at Moline, which serves El Sharana and South Alligator, are the first in Australia to use a solvent extraction process for the recovery of uranium. Other treatment plants use ion exchange methods.

In Queensland, the Mary Kathleen field contains the largest known single deposit of uranium ore in Australia, with reserves likely to be in excess of eight million tons. Output to a total of £40 million ($88 million) from the field will be sold under forward contract to the U. K. Atomic Energy Authority.

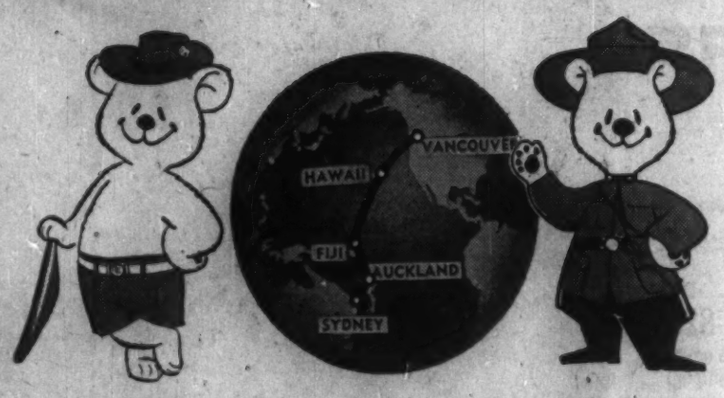
Australian contracts with the Combined Development Agency expire in the period 1962-63.

The contracts with the U. K., which cover about two thirds of the present total Australian output, will expire by about 1966, depending on annual production.

The Radium Hill and Rum Jungle contracts with the Combined Development Agency, when negotiated, covered known reserves of ore.

Further exploration at these fields has not yet established additional reserves which would justify long-term contracts beyond 1962.

Canadian Pacific Airlines



LINKING CANADA AND AUSTRALIA BY AIR
SINCE 1949

The first stage of Canadian Pacific Airline's present 43,700 mile five-continent route structure was created in July, 1949 with the inauguration of regular air service between Vancouver and Sydney, Australia, with stops at Honolulu and Fiji . . . a distance of 8600 miles across the Pacific.

Since then, Canadian Pacific has expanded "Canadian Flag" air service to New Zealand, Japan, Hong Kong, Mexico, Peru, Chile, the Argentine, Holland, Portugal and Spain, and is now operating a jet-powered "Canadian Empress" service across Canada.

Canadian Pacific is equipped with a fleet of jet-powered Britannias and Douglas DC6Bs. Orders have been placed for Douglas Super DC-8 jetliners, which will provide world air travellers with faster service than ever before.

Canadian Pacific spans the world by land, sea and air — to meet your travel requirements.

'Between the Desert and the Sea'

At first glance, you might think Australia and Canada were utterly contrasted.

The great, lonely continent of the southern Pacific has a tropical north, a perpetual problem of getting enough water, a still solidly British population.

It sounds as different as it could be from Canada, which jostles its U. S. neighbor along the common border, has a third of its area covered with water, its north frozen and remote, its people now less than 50% of British origin.

The truth is that just when the differences between Australia and Canada seem sharpest, their fundamental likeness emerges most clearly.

Australia's north and centre is dry. Ours is frozen. But the basic problem is the same.

They are squeezed between the desert and the sea. We are squeezed between the Arctic and the Americans.

If the problem isn't quite the same, there's an underlying similarity which makes it fascinating to compare the way we tackle it.

Australia, you might think by looking at a map, is a nice round country, in contrast to the thin string of Canada's populated areas strung out from coast to coast.

But the map is deceptive. Australia's population is strung out in a thin belt around three sides of its coast in as long and thin a string as Canada's.

Stretch that coastline out into a straight line, and you have something very like Canada's long reach from the Maritimes, up the St. Lawrence, through the Lakes, across the prairies and the mountains to the Pacific Coast.

To complete the similarity, you have the two islands we had both forgotten — Tasmania and Newfoundland, though they have nothing else in common, except feeling neglected.

This is, in fact, a much truer picture of Australia than the impression you get from the map.

Like Canada, it consists of widely scattered settlements clinging to the one hospitable edge of the country. Like Canada, it has huge empty stretches — even along the edge.

And like Canada, it has the constant irritation of uninformed people looking at the map and saying:

"Look at all that space they are doing nothing with."

In Australia, as in Canada, the determination to make something of all that hopelessly difficult empty space is largely a postwar growth.

It has been spurred in Australia, to a considerable extent, by fear.

But Australia was bombed. Japanese planes bombed the northern capital at Darwin and it looked less like an isolated raid than a softening-up operation for the land troops not far behind.

They were **not** far behind. New Guinea is the first stop northward from Australia. It was only there — right on Australia's doorstep — that Japan's great sweep across the Pacific was halted.

It is not altogether unsuitable — and no Australian finds it so — that the U. S. war memorial dominates Canberra. The Americans came and the enemy was beaten back. And MacArthur wasn't the man to play down the drama of it.

When it was all over, the Australians took a new view of life.

Now they knew they were in Asia. They began to see themselves as the one outpost of the Western World in that quarter, or third, of the globe.

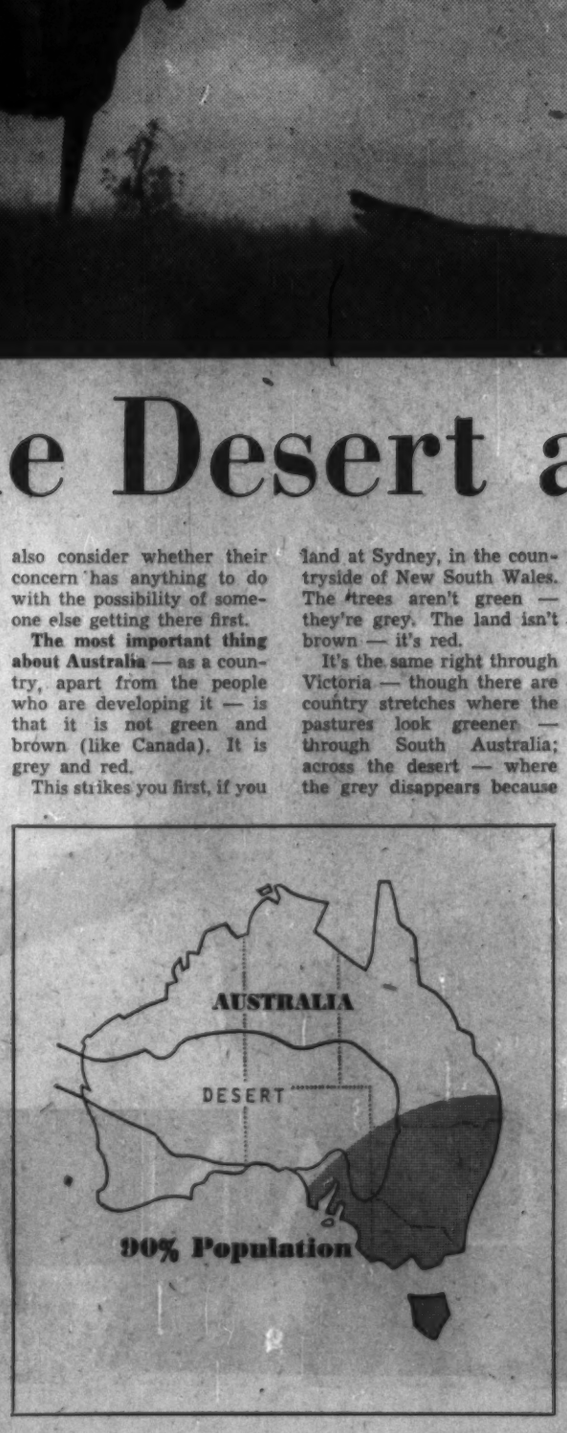
And they began to worry about their empty spaces.

Canadians, in their new concern about the North, may also consider whether their concern has anything to do with the possibility of someone else getting there first.

The most important thing about Australia — as a country, apart from the people who are developing it — is that it is not green and brown (like Canada). It is grey and red.

This strikes you first, if you land at Sydney, in the countryside of New South Wales. The trees aren't green — they're grey. The land isn't brown — it's red.

It's the same right through Victoria — though there are country stretches where the pastures look greener — through South Australia; across the desert — where the grey disappears because there aren't any trees, but the red becomes more intense than ever—and in West Australia, in spite of its brilliant wildflowers and flowering shrubs.



The trees with the grey foliage are gum trees—members of the eucalypt family, as all Australian native trees are (except for a small family of tropical woods in northern Queensland).

At first these gum trees seem drab. But soon you begin to notice how many different varieties there are, twisting themselves into wonderful shapes, and showing a great range of color from yellow to purple in the trunks.

The greyness in the grass — which usually isn't grass, as we understand it— comes from the dryness, which is the dominating fact about most parts of Australia.

In that coastal belt from Brisbane right down around the corner to Adelaide the climate is reasonably temperate (though much warmer than Canada), the rains are adequate. You find dairying and mixed farming of all sorts. But that is east of the coastal range, which runs right down the east coast only a few miles inland.

Once you are over the watershed and start heading eastward, you find the land getting drier and drier and more and more barren. By the time you cross the New South Wales border, you're in a dry depression — part of it under sea level.

And again the maps fool you. They mark scores of places as lakes. If you ever got there you'd find nothing but dried-up beds of cracked earth. Just once in a while in a wet year there's water in them for a spell; but even before the year's out, they'll again be dry as a bone.

It's the strip between the mountains and the desert, then, that the Australians look to when they talk about "closer settlement".

To oversimplify, it's divided into two belts — the "wheat-sheep belt" and the belt that's just sheep.

The third, and everybody hopes increasing, kind of farming area in these parts is irrigated. Two thirds of all the irrigated land in Australia lies in the rich basin of the two rivers, Murray and Murrimbidgee.

Out beyond the sheep stations of New South Wales and Queensland which can carry one sheep for every two acres, comes the real outback", where it will be one sheep to every six, eight or 10 acres.

Then finally there are the dry ranges of the north and centre where it's nothing but cattle, and they have to depend on nature's fortunate provision of a large artesian basin under much of this country.

It's in some of these remote areas that the great mineral discoveries of recent years have been made — again, just as in Canada.

This is the country which the Australian government and people are setting themselves to develop as the great Western outpost of the South Pacific.

The sense of being isolated and utterly remote from their real friends and neighbors has ceased to be a weakening thought.

It has become a challenge — to build up the population, to increase their industry, to use the land more intensively, to find ways of overcoming the handicaps of drought and distance.

In every point of this, it seems, the Australian effort brings an echo from Canada. The country is undertaking an enterprise which we — of all people in the world — should understand.

Look what's happened to Wool

Now—nature's miracle fibre becomes a modern miracle cloth!

It's shrinkproof
Even in washing machines!
The newest shrinkproof process, developed in Australia this year, is a major economic advance. It can be very simply applied on existing equipment, so costs are low.

It's mothproof
Commercially economic mothproofing first became fact in 1956 when Australians invented the 'Si-Ro-Moth' process.

It drip dries
'Wash 'n wear' wool became a commercial reality just two months ago. Another first to Australian scientists. 'Sironized'—the new process—first shrinkproofs then sets wool fabric. No ironing is ever needed.

It can be permanently creased or pleated
Now! Wool creases and pleats stay put through rain and dry-cleaning; on 'Sironized' wool through washing too! The Australian-invented 'Si-Ro-Set' process first made it possible in 1957.

It can be printed in 15 minutes
Two years ago, Australian scientists streamlined the Vigoureux printing technique to speed up wool's natural, easy response to dyes. Now it cuts processing time by 75%.

It even boils safely
Australian hospitals are today sterilizing shrinkproofed blankets. They use a boiling technique recently established by Australian scientists as completely safe against changes in size, shape or texture.

Ask the Australian Trade Commissioner
for any information about trade with Australia. He can put you directly in touch with Australian textile and fashion manufacturers too. He can also tell you how to obtain rights to use any of the wool processes described above. There are two Australian Trade Commissioners in Canada, they are located at:

1255 Phillips Square
MONTREAL

1030 West Georgia Street,
VANCOUVER.

The finest, softest wool in the world comes from Australia. And now Australia leads the world in adding carefree wear to this most luxurious of fabrics. Today, wool is fashion news as never before. Because now, with its new-found practicalities, wool—and only wool—performs serenely through every fashion scene. Australian fashion designers, naturally enough, are sensitive to the genius of wool. It shows in their superb handling of wool to express high fashion.

The world's finest wool is

AUSTRALIAN MERINO

Australia produces 60% of the world's merino and sells 30% of all the wool the world uses.

DEPARTMENT OF TRADE, CANBERRA, AUSTRALIA.

THE STATES

Queensland

Needs People, Capital

"The greatest needs of Queensland at present are finance and population." This was the way Premier Frank Nicklin summed up his state's problems.

Ken Morris, Deputy Premier and Minister for Labor and Industry, stresses the desire to attract foreign capital.

Their motto might be:

So much to do, so little capital to finance it.

● **Power:** High on the list of claimants for new funds is the State Electricity Commission.

H. Neil Smith, Electricity Commissioner, says that in the last 10 years the commission invested £115 million ($250 million) on electrical development in the state. Consumers rose (in the decade up mid-1958) from 218,000 to 368,000, and annual revenue from £3.5 million to £18.5 million.

In the next 10 years Smith expects that "it will be necessary to spend £190 million ($420 million)." Planning is going ahead in detail for the next decade, and in outline for 20 years hence.

Queensland's power suppliers grew up as local undertakings, and the supply is still decentralized into broad regional systems. But they are steadily being interconnected, and their plans are fitted in together.

For the southern and central areas, there are plentiful deposits of good coal in convenient locations. The power station for the central region (known as the Capricornia Regional Power Station because it is on the Tropic of Capricorn) uses coal from the big Callide field.

Callide open - cut coal grades to 10,000 b.t.u.'s per pound. It is delivered to the station at less than £2 per ton — in fact at about $4.

The Electricity Authority offers a price of about 9 mills to any user taking more than 30 million kwh in a year, charges only a little more to Mount Morgan mines, a big user.

Inland about 140 mi. is an even larger and better deposit of coal, still largely unused.

This is Blair Athol. It grades 11,000-12,000 b.t.u.'s. It can be mined in an open cut. Its delivered price could be less than half the Callide price, or something very near to $2 per ton.

Queensland claims that a big steam plant based on this coal could provide bulk power — for an aluminum smelter, for example — more cheaply than any other plant in Australia, thermal or hydro.

In the far North the Electricity Commission is already using some hydro and investigating several more possible projects.

These, of course, are based on the very heavy summer rainfall which falls on the coastal mountains north of Townsville, where it has a very short run-off to the sea.

● **Transport:** The demand for power increases steadily as new industry and new mines are developed. So does the demand for transport facilities, water supplies, schools, universities and every other kind of social capital.

Just this year the recent discovery of copper at Mount Isa — with a substantial surplus for export — led to the opening of a new electrolytic copper refinery down on the coast at Townsville. By 1964, it has been estimated, export earnings from the Mt. Isa enterprises will be over £60 million ($130 million).

But Mt. Isa is away in the north-east part of the state, and all the ore has to be brought to Townsville over a rail route of more than 600 mi. The existing track is not up to it. It needs to be regraded, strengthened and, in some parts, virtually rebuilt.

The Queensland government, which runs the railways within its borders (like all the other states), has accepted this responsibility — but is still looking for the money.

An attempt to raise an overseas loan came to nothing. The heat is now being turned on the Commonwealth government.

But meanwhile Nicklin's government decided at least to make a start.,

The weakest part — the western half of the track — is being tackled first — and it may cost up to £10 million ($22 million) in all.

CITY HALL of Brisbane cost £1 million. The foundation stone was laid in 1920 by the then Prince of Wales, later Duke of Windsor. The tower is 350 ft. high.

For a start the 1959-60 budget provided £3,300,000 ($7,260,000) to get work started early in 1960.

● **Uranium:** This same railway serves the Mary Kathleen uranium mine, which has the longest assured life of any of the Australian producers of uranium. Its output is all being sold to the U. K. Atomic Energy Authority. The contract is worth rather more than £40 million ($88 million), and it is expected to keep the mine and the treatment plant busy until 1966.

The uranium ores at Mary Kathleen are mined from an open cut and the same advantage is offered by the more recently discovered bauxite deposits farther north still.

● **Bauxite:** Along the western side of York Peninsula, overlooking the Bay of Carpentaria, the ore forms a seaside cliff of bauxite.

It was discovered by a geologist working for the **Consolidated Zinc Co.**, who was looking — not for bauxite — but for oil.

Consolidated Zinc called in as partner **British Aluminium Co.**, and they formed **Commonwealth Aluminium Company Pty. Ltd.**, generally known as COMALCO.

Just two years ago, the company signed an agreement with the Queensland government to exploit a large section of the deposit.

Aluminum Co. of Canada holds another section under license and is engaged in investigating it.

Everywhere in Australia you will find people speculating about the great new aluminum plant soon to be built.

Reynolds Aluminum, by its newly acquired interest in the British Aluminium Co., is now supposed to hold the key to the future.

But two years ago, the vice-chairman of COMALCO, M. S. Mawby, tried to damp down exaggerated expectations.

In a public statement after the signing of COMALCO's agreement with Queensland, he said:

"Weipa is nothing, if not a long-term project — a project whose ultimate potential will scarcely be seen in our lifetime."

He reminded the premier and others that aluminum was in a phase of oversupply, and that other new capacity was being developed in the world. And he expressed the company's faith that the world need for alumina and aluminum would go on growing, and that COMALCO would be able to produce them at a competitive price "as the demand develops."

● **Rural development too.**

Although mining developments have been the glamorous part of Queensland's recent growth story, the basic dependence upon export of rural produce remains, and the government is not neglecting the farming and ranching industries.

Sugar is, in most years, the chief export-earner. Queensland (with a small area in the north of New South Wales, which is treated as part of Queensland for this purpose) supplies all Australian requirements, it also controls exports to U. K., Canada, New Zealand and Japan, besides smaller markets.

Export income which averages about £30 million a year, (and reached £32 million in 1958-59), comes about half from the U. K. and between one fifth and one quarter from Canada.

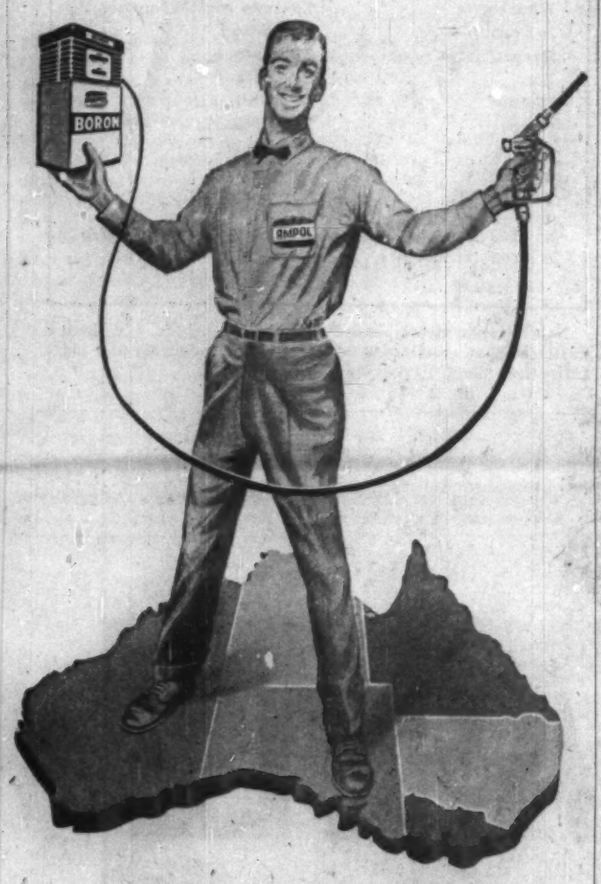
Export sales of sugar are strictly regulated by international and intraCommonwealth agreements, and domestic sales by agreements between the government of Australia and the government of Queensland.

Colonial Sugar Refining Co. handles the administration of quotas and all the export marketing.

Beef: This is another product of which Queensland is the largest producer among the states. Like most of the state's primary products it is shipped directly overseas from Queensland ports.

A problem is developing over the beef cattle which are customarily raised on the vast open ranges of northwestern and northeastern Queensland.

Some six million, out of a total of about 11 million head of beef cattle in Australia have been estimated to come from Queensland.



Young giant . . .

Australia has grown fast. It is a young and vigorous nation bustling towards the great future it sees as its destiny: a nation with expansion in its blood. One of Australia's fastest-growing commercial organisations is Ampol. Established twenty-three years ago, this Company ranks to-day as one of the first nine public companies in the Commonwealth. Ampol markets a full range of petroleum products throughout the Commonwealth, is Australia's biggest commercial shipping operator, and has bunkering facilities available at all Australia's principal seaports.

These figures show how Ampol is growing with Australia:

	1949	1959
Sales	£4,143,985	£32,547,096
Profits before tax	£317,820	£2,868,852
Profits after tax	£181,881	£1,866,613
Stockowners' funds	£1,639,585	£17,144,078
Dividend rate	8%	13½%

AMPOL PETROLEUM LIMITED

AMPOL

HEAD OFFICE: BUCHANAN ST., BALMAIN, SYDNEY, AUSTRALIA.

AMPOL THE DRIVING SPIRIT OF AUSTRALIA

'Poised for Rapid Advance to the Top'

FRANK NICKLIN
Premier of Queensland

I cherish the opportunity of telling the people of Canada, through the pages of The Financial Post, something of the developing economy of Queensland and our plans for the progress of this vast State which comprises more than 22% of the land mass of the Australian Continent.

Queensland, which this year celebrates its first century of self-government, is poised for rapid advance toward its destined place as the leading State in the Australian Commonwealth.

It has already reached the stage where it is making a decisive and increasing contribution to the Australian economy.

Value of our overseas exports for 1957 - 58 reached more than £156 million; our imports amounted to just under £50 million.

Our great primary industries — wool, sugar, and beef — which carried us over the major part of the first hundred years, are now being joined by secondary industries, which grow in magnitude daily.

We have entered the most remarkable era of mining expansion in the history of the State.

Two great mineral enterprises — Mt. Isa and Mary Kathleen Uranium — are already contributing substantially to the state's fast-growing wealth, and this will soon be enlarged still more by the development of the enormous bauxite deposits at Weipa, in Queensland's Far North.

NICKLIN

The only limiting factor is the amount of investment capital available for the vast expansion program that the state's mineral resources demand.

One of the essentials of our future development is the decentralization of population, and it is the policy of the government to do all within its power to encourage closer settlement in the provincial regions.

All that is needed to harness Queensland's enormous economic potential is finance, plus population, and I firmly believe that in a few short years those needs will be abundantly fulfilled.

Plenty of power for growth in New South Wales Australia

The N.S.W. Electric "Grid" system, charged with power from 24 stations, reaches for 4,000 miles into every part of the State. Present work is on a key stretch of line to operate at 330,000 volts over a distance of 535 miles.

Assured of a plentiful power supply, industry is making great forward strides in N.S.W. Thanks to the "Grid" system, which makes the maximum use of low-cost power produced on the coalfields, electricity is stably priced and dependable.

To the average Australian home-owner (69% of Australians own their own homes) modern means electric. With dependable, economic electric power always available, he's in the market for the latest electrical appliances.

New South Wales, Australia's leading State, is larger area-wise than the provinces of Alberta and Newfoundland combined.

In the year 1956-57 farm production increased 33.4% over the year 1951-52—an impressive figure in any area with a well-developed agricultural industry. Even more impressive is the increase of 59.5% in the net value of factory production over the same period! These increases were made possible largely through the abundance of electric power.

The Electricity Commission of New South Wales has fully met the State's entire power needs, which have increased 100% in the past seven years. It has also a firm construction programme to meet the 10% increase in the demand each year. There will always be plenty of power for all in New South Wales.

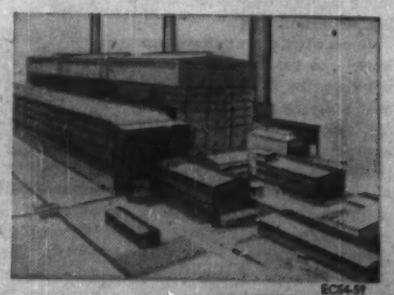
If you are interested in obtaining more information about electricity production in N.S.W., you are invited to write The Commissioner for New South Wales, Suite 1301, 680 Fifth Avenue, New York, or to

The Electricity Commission of New South Wales

15 CASTLEREAGH STREET, SYDNEY, N.S.W., AUSTRALIA

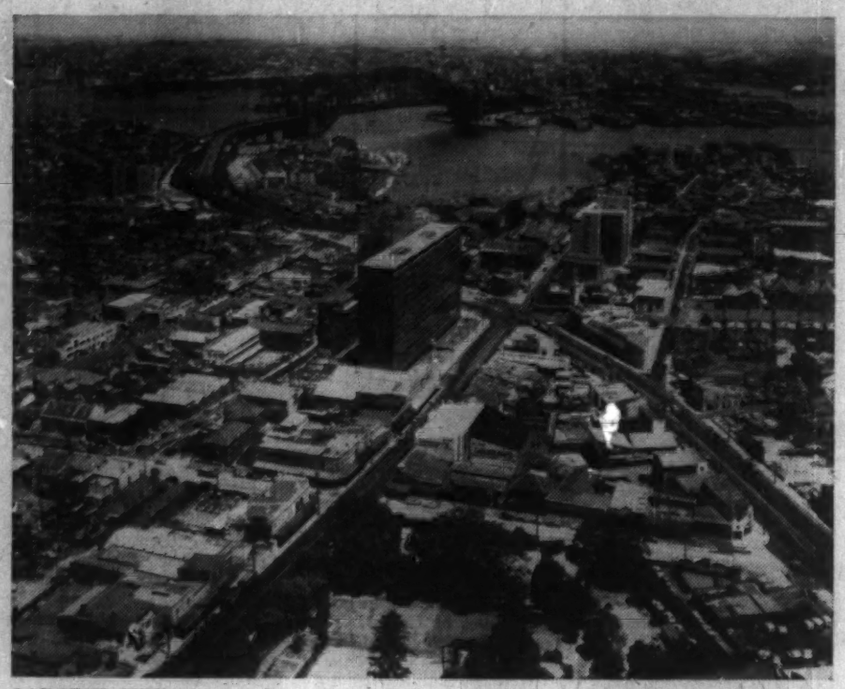
About 80% of N.S.W. farms are now connected with the main electricity supply. So efficient is the system that remote ranches, or "Stations" as they're called in Australia, have electric power supply as dependable as that to a suburban Sydney home.

New South Wales' electric power comes from 24 power stations strategically situated throughout the State. Immediate plans provide for the extension of existing stations and erection of at least two more. The first (illus.) will be of one million kilowatts capacity.



EC54-57

THE STATES



LARGEST CITY in Australia is Sydney, dominated by Sydney Bridge. A bustling port is more like a U. S. city than most Australian cities. Bondi beach is one of Australia's most popular.

New South Wales

Heavy Industry Centre

By R. J. HEFFRON
Premier and Minister for Education of New South Wales

Because of economic and geographical factors, by far the greater part of Australia's population and manufacturing activity is situated in the south-eastern portion of the continent, with the greatest concentration occurring in New South Wales, the oldest and most populous of the Australian states.

New South Wales embraces an area of 309,433 sq. mi. or 10.4% of the Australian total.

From these figures it will be readily appreciated that New South Wales already possesses a highly integrated industrial and commercial complex and a large local market.

Most important are the various types of heavy industry which employ 211,000 people and have an annual value of production in excess of £A341 million.

The State's iron and steel industry now provides the whole of Australia's output of these metals. Its production centres are located on the coast north and south of Sydney, at Newcastle and Port Kembla, where a wide range of high quality steels are turned out at prices generally below those obtaining in other parts of the world.

Last year 3,026,000 tons of ingot steel, 2,030,000 tons of pig iron and 2,264,000 tons of metallurgical coke were produced by the industry.

New South Wales is also an important centre for the production of machinery, chemicals, pharmaceuticals, plastics, non-ferrous metals, paints and varnishes, textiles and foodstuffs.

From current developments it can be presumed that emphasis in this State will be placed more and more on high-finish manufactured products.

With a virtual monopoly in iron and steel production, large reserves of high quality black coal and well established heavy engineering and chemical industries, New South Wales can expect increasing diversification of both rural and secondary production.

The less-developed States, such as Queensland and South Australia, have important contributions to make toward Australia's industrial growth; but in my opinion they may tend to attract large-scale single projects more closely associated with primary industry.

Recognizing that there are basic economic differences between the States, the New South Wales government has for some years directed its energies toward providing the works and services which would most effectively complement local economic trends and the efforts of private industry.

The success of this policy is already apparent.

For example, by investing heavily in generating equipment, the New South Wales Government has not only secured adequate reserves of electric power. It has also placed itself in the position of being able to reduce progressively industrial and domestic tariffs.

Power lines have been erected with such speed in country areas that within a year or two the practical limit of rural electrification will have been reached.

Another example of government enterprise designed to match the needs of the new industrial and scientific age is in the sphere of tertiary education.

Ten years ago, New South Wales possessed one university and one university college. Today, there are three universities and one university college. One of these, the University of New South Wales, is the only institution in the southern half of the world devoted primarily to the needs of technology.

It could be said, therefore, that New South Wales is most suited to the establishment of a wide range of moderate-sized processing industries drawing raw materials from basic and intermediate stage manufacturers and producing both consumer articles and equipment for industry and commerce.

In the engineering and machinery fields opportunities exist for the manufacture of textile machinery, trade and hand tools, automobile parts, electric control gear, typewriters and business machines.

Cotton spinning and weaving in Australia is at present confined to utility yarns and fabrics such as canvas, duck, drills, sheeting and towels.

The finer yarns and fabrics are imported to the extent of some 50 million yd. annually. Similarly, large quantities of laces and embroidery are imported. There are, obviously, great opportunities for investment in the production of fine cotton textiles.

The chemical and pharmaceutical industries are already well developed; but local demand is growing for a number of products which are as yet wholly or partially imported. These include dyestuffs, some plastics, cyanides, urea, antibiotics, vitamins.

These are just a few examples of the opportunities which exist for industrial investment in this State.

The degree of overseas confidence in New South Wales as a field for investment is indicated by the fact that there are 252 U. K. companies already operating here, and a total of 573 United States firms also have subsidiary or licensing arrangements in New South Wales. Many other countries, including Canada, have interests in this State.

With the object of giving every possible assistance to both local and overseas manufacturers the New South Wales government, early in 1958, established within the Premier's Department a division of industrial development.

The division is staffed by a group of officers with a detailed knowledge of local economic and manufacturing conditions. It is well equipped to offer expert advice and give practical assistance to interested individuals and firms.

New South Wales

		New South Wales Proportion of Australia's Total %
Population	3,726,000	38
Personal income	£A1,776 million	39

Annual value of factory production	£A758 million	43
Annual value of retail sales	£A944 million total.	39.7

Oldest State

Loyal to Labor Party

New South Wales, the most populous state of Australia, has remained faithful to its Labor government, when all around fell away.

(Tasmania has the only other remaining Labor government, and its actions have always been limited because it lacked a majority in the upper house).

The Labor success in this state was largely due to "Joe" Cahill, long-time premier, who died suddenly during October.

He was a Labor politician of what was called the "old" type, like the British trade union leaders turned statesmen.

But he, like nearly every other minister in his cabinet, also followed the Australian pattern—so unlike the British in this — that they were Roman Catholics.

A large part of Cahill's achievement was that he held the Labor Party of New South Wales together, while it was destroying itself by disruption in other states and seriously weakening itself at Canberra.

Because he achieved this, there is still a strong Labor Party in this state, and a Labor government for his right-hand man, Mr. Heffron, to take over.

Like all the states, New South Wales is top-heavy.

Out of its population of about 3¾ million, two million live in Sydney. The rest are spread through an area three times the size of Victoria. The result is to give New South Wales an average of about 12 people to the square mile, while Victoria has 31.

(Canadian provinces, by comparison: Ontario, 16 per sq. mi.; Quebec, barely nine; Nova Scotia, 33 and British Columbia, less than four people per square mile.)

The preponderance, in many respects, of New South Wales among the states is shown in these figures:

The State has: 38% of Australia's population; 39% of the national income; 43% of the factory production.

Sydney leads Melbourne—in size anyway—by rather more than Montreal's lead over Toronto.

And more than half the "New South Welshmen" (as they rather oddly call themselves) are also (as they put it) "Sydneysiders."

Another quarter of a million people live in the major industrial towns north and south of Sydney—Newcastle and Greater Wollongong, which includes Port Kembla.

Allowing for all the smaller towns of 20,000-40,000 or less, the division between rural and urban population must be much the same as in Ontario, where at the 1956 census it was 32% rural and 68% urban.

Again like Ontario, New South Wales includes a substantial area which is hardly settled at all. Something like one-third of its land is arid.

No one can discount the scientific advances in land use which may be accomplished—but in that vast inland area, where it may take 30 acres to feed a single sheep, any chance of dense settlement seems to be at least a long way off.

A number of country towns provide a focus for the rural life around them.

Other towns in the southern part of the state are Goulburn and Albury, which is on the border with Victoria. Inland from Sydney, Bathurst and Orange are getting up to the 20,000 mark, and so is Lismore in the north.

Larger than these, but chiefly occupied with coal-mining, are Cessnock, Maitland and Lithgow, all within easy reach of the three big industrial centres — Sydney itself, Newcastle about 100 mi. up the coast to the north, and Greater Wollongong-Port Kembla which are a rather shorter distance down the coast.

In economic terms, rural primary production and urban secondary manufacturing are better balanced than the distribution of population might suggest. The wool clip brings more income to the state than all the output of the steel industry. The wheat crop is worth almost as much as the coal dug in a year.

Wheat was first grown in Australia in 1789, two years after the "First Fleet" arrived at Sydney, at Parramatta, quite near Sydney. Coal was discovered near Newcastle in 1796, and in the same year the famous Captain Macarthur got the first merino sheep from South Africa.

These three products—wool, wheat and coal—formed the foundation of the Australian economy more than 160 years ago. And they still do, as the economy of New South Wales shows.

Coal was the essential base for the great industries which are expanding so rapidly at centres like Newcastle, Sydney and Port Kembla. It is also the source of more than 90% of all the power used in Australia. And New South Wales has more than 70% of the known reserves of high quality black coal.

All but a small proportion of it is dug out of underground mines, where a high degree of mechanization has been achieved. Between 1953 and 1958 the proportion of total output mechanically produced was raised from 52% to 82%. Correspondingly the output per man-shift rose from 3.19 tons to 4.12 tons, and the average cost per ton at the colliery dropped from 63 shillings to 57 shilling (a reduction of 9%).

More than 3,367,000 tons of coal—about one fifth of total production — went last year to the steel-making plants of the **Broken Hill Pty.** and its subsidiaries.

At Newcastle a vigorous development program is in progress which will increase the steel-making capacity by at least 50%. Present capacity is 1.4 million tons.

Notable developments in the past year were the proving of a new skelp and strip mill, a new coal washery, and the start of a new sinter plant which should be in operation next year.

Nearly 16,000 people are employed at Newcastle in the making of steel.

At Port Kembla, which is part of the City of Greater Wollongong, the B.H.P. company is developing another 2.4 million tons of capacity. It now employs 13,300 people and will need some 2,500 more.

Developments recently completed or in progress will soon make Australia self-sufficient in tinplate (hot dipped) and in cold-rolled stainless steel.

With the primary steel industry and the coal as a base, the coastal strip between Newcastle and Port Kembla (which includes Sydney) has become a centre for much of Australia's heavy engineering.

The range of products goes all the way from fencing wire and posts to locomotives, constructional steel, heavy bus chassis and refrigerators.

New developments, based partly at least on the new oil refineries at Clyde and Kurnell, include a widening range of chemicals and plastics.

Be a Dinkum Aussie

"Don't be a dill. Don't sling off instead of shouting. Bring out that spin and knock down a schooner. You're in the rubbity, mate. Get your scran later. You better pin one on."

Australian slang is rich and varied and original.

It would be a lifetime's work to make a glossary.

A few samples are given here to help you not to be a prawn, nor to go bungin' it on, but to know where you're bloody going, when you get to Australia.

It is not for wowsers, and the management accepts no responsibility.

Reckon I c'd knock back a schooner:	*I could use a glass of beer.*
Feeling crook:	*Not well, sick, or browned off.*
Fair dinkum:	*Spifing, top-hole, swell, the real gen., or (more currently) top drawer.*
Dill:	*Square.*
Scran, tucker:	*grub, more politely food.*
Tucker box:	*lunch pail.*
Larrikin:	*maverick, off-beat, wild.*
Wowser:	*bluenose, puritan, prohibitionist.*
Rubbity:	*pub.*
Jackeroo:	*station-hand (on sheep or cattle ranch).*
Oregon:	*"planks and boards of Douglas fir."*
Billy:	*metal pot used for making tea and rarely washed.*
Cuppa:	*comes out of the billy — very black.*
Fabulous drops:	*What babes!*
Dingo it:	*Funk it, after great show of courage.*
Raw prawn:	*Tough proposition.*
Plonk:	*cheap wine.*
Smack us in the eye with another hunk of dodger:	*Please pass a slice of bread.*
Whacko:	*You can say that again.*
A brown:	*One penny*
Drey:	*Threepence*
Zac:	*Sixpence*
Deener:	*One shilling*
Caser:	*Five shillings*
Quid:	*One pound*
Spin:	*Five pounds*
Tenner:	*Ten pounds*

And if you've more than a tenner to bust you're a bloody millionaire.

NEWCASTLE

AUSTRALIA'S INDUSTRIAL CAPITAL

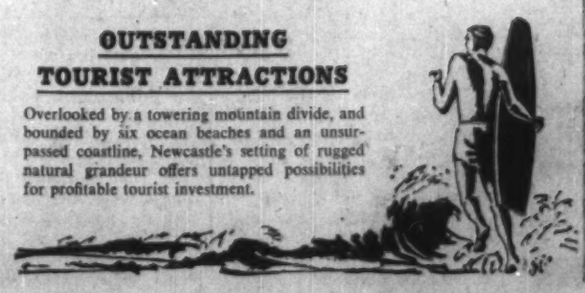
Newcastle, centre of the richest industrial and rural areas in Australia, is right on the nation's most bountiful deposit of black coal. A busy port, a thriving industrial city, with railheads, arterial roads, and unlimited supplies of power, gas and water. Newcastle, industrially, offers more than any other city in Australia. New plant sites totalling 7,000 acres, with deep-water frontage, are being developed within 20 minutes' travel of the city. Newcastle is also a major wheat terminal and wool selling centre for North and North Western New South Wales.

Newcastle's thriving major industries include: Broken Hill Proprietary Company Limited (iron and steel) and associated manufacturers of sheet metals, steel tubes, wire, wire netting, rails, wire rope; Commonwealth Steel Company Limited (specialised steel products); Masonite Corporation (Australia) Limited (fibre board); Courtaulds (Australia) Limited (rayon cord); Bradford Cotton Mills Limited (spinning and weaving); Electric Lamp Manufacturers (Australia) Pty. Limited.

The Town Clerk, City Hall, Newcastle, invites you to write for further details and literature on Newcastle.

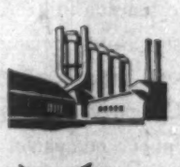
OUTSTANDING TOURIST ATTRACTIONS

Overlooked by a towering mountain divide, and bounded by six ocean beaches and an unsurpassed coastline, Newcastle's setting of rugged natural grandeur offers untapped possibilities for profitable tourist investment.



SHIPPING
An annual tonnage of 8,445,249 makes Newcastle the second busiest port in Australia.

STEEL
50 per cent of the nation's total output of steel produced annually.

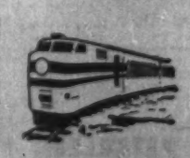


POWER
Industrial electric power and gas available at extremely competitive rates.

COAL
53 per cent of Australia's black coal is produced in the Newcastle district.

WATER
Unlimited dam and sandbed water available to industry.

TRANSPORT
30 minutes by aircraft, 104 miles by fast air-conditioned train, 107 miles by road, 60 miles by sea from Sydney, Australia's largest city.



SITES
Unlimited new plant sites now being opened up within five miles of the heart of the city, and close to all labour sources and established industries.

THE STATES

S. Australia

Industry Stable

PLAYFORD

Sir THOMAS PLAYFORD
Premier of South Australia

South Australia emerged from the Second World War with its industrial structure greatly strengthened.

Since then, through a series of further dramatic industrial acquisitions, the state has become a prominent force in Australia's secondary industry.

Before 1939 primary production dominated our economy with substantial production of wheat, barley, meat, wool, fruits and wine.

We are still big primary producers and are self-sufficient in all our main food requirements with substantial surpluses available for export.

Diversified farming has been successfully encouraged and resulted in more profitable farming operations.

Notwithstanding continued recognition of the basic importance of primary industries to the state's economy, South Australia has been able to make spectacular progress in secondary industries.

SOUTH AUSTRALIA IS NOTED FOR

● **Industrial stability.** Employer - employee relationships are good. There is a lower ratio of industrial disputes than in any other Australian state.

● **Government encouragement** and financial assistance to approved industries.

● **Provision of homes** for employees and the supply of other necessary facilities including power and water.

MAJOR NEW PROJECTS RECENTLY ANNOUNCED INCLUDE:

▸ **An integrated steel works** initially costing $68 m. at Whyalla, which is on the western shore of Spencer Gulf.

Whyalla is already the leading port for shipping the rich iron ore which sustains the Australian steel industry.

The most modern shipbuilding yards in Australia are also at this port, which has facilities for the construction of ships up to 40,000 tons.

At present there are a modern blast furnace and several important ancillary industries at Whyalla.

The water pipeline is to be duplicated and a very big housebuilding program has been planned.

▸ **Across Spencer Gulf** at Port Pirie, a $1 m. metals refinery is to be built in the near future. This town already possesses the world's largest lead smelting works and an important uranium treatment plant.

▸ **A $35 million oil refinery** is being built at Hallets Cove, 15 miles south of Adelaide.

▸ **Important industries like General Motors - Holdens,** Kelvinator, Chrysler, Philips Electrical and Imperial Chemical Industries are all planning extensions to their present activities in South Australia.

South Australia possesses a wide range of industries, but there is still room for newcomers to establish others.

I will be glad to discuss any proposal with interested industrialists and give them practical examples of how this state is ready and willing to facilitate the establishment of worthwhile industries.

South Australia is fortunate in having efficient government or semigovernment authorities responsible for the provision of power, water and housing.

The basic importance of these services to population and industrial growth has been fully recognized and effective action has been taken to keep supplies ahead of demand.

South Australia also possesses several important mineral features including:

1 A uranium mine at Radium Hill.
2 Mining and concentration of pyrites for sulphuric acid and fertilizer manufacture.
3 A sub-bituminous coalfield at Leigh Creek which has been developed rapidly in postwar years to supply fuel for the principal State power stations.
4 80% of Australia's salt requirements are supplied from our highly saline gulf waters.
5 Gypsum deposits support Australia's plaster and cement industries.
6 Important talc deposits supply the whole of Australia's requirements.
7 Barytes deposits are ample for paint-making and for use in oil exploration.
8 The bulk of limestone and dolomite, required for the Australian steel industry comes from South Australia.
9 Opal fields at Coober Pedy.
10 Large areas of South Australia are regarded by world petroleum authorities as possessing favorable oil bearing strata. Deep drilling is now being undertaken near Innamincka in the north-east corner of the State by organizations combining local and American interests.
11 The value of mineral production has increased ten-fold in the last 12 years and now amounts to $60m. p.a.

Government assistance to mineral industries is given through the department of mines, which provides a geological survey branch, a boring branch and a well-equipped research and development branch.

South Australia is also noted for extensive and effective land settlement and irrigation schemes.

It has tackled successfully the difficulty which existed through the lack of natural forests.

This problem was foreseen 80 years ago and imaginative action taken so that today our man-made forests supply the State's softwood requirements.

South Australians are well provided with the conditions and modern amenities for happy and contented living.

We have a temperate, Mediterranean-type climate. Adelaide, the capital, is a delightful city bounded on one side by the sea of Gulf of St. Vincent (with miles of excellent beaches) and on two other sides by the beautiful Mount Lofty Ranges.

South Australia faces an exciting future. It is the place for people interested in development and progress and gracious living.

As I have shown above many large organizations have already recognized these facts and have commenced operations in this state.

There is substantial scope for further growth and government encouragement and support are readily available to desirable new enterprises.

VICTORIA SQUARE, Adelaide, is one of five city squares spaced in the area of almost one square mile occupied by the business section. Parkland separates city, suburbs.

Farmers Weather Record Drought

Sceptics who complain that Australia has been pushing industrialization too fast must reckon with this year's situation in South Australia.

This state is suffering from the worst drought on record.

The slaughterhouses north of Adelaide have been glutted with sheep for which there is no feed. Many of those now offered are, as one observer said, "no better than skin and bones". The abattoirs' going price is about a dime per sheep.

Out in the back country it is worse.

"I have traveled through the back country for 25 years," said one doctor, "and I have never seen so many dead cattle as there are now."

Such a natural calamity as this would have paralyzed the state 20 years ago. You couldn't have spent a day in Adelaide without feeling its effects.

Today Adelaide wears an air of prosperity. The drought seems like something that city-dwellers read about. The spacious, wide, "western" streets of the capital are bustling. The many well-stocked stores are crowded.

"The effects," said Premier Sir Thomas Playford, "will be weathered in a manner that could not have been contemplated 20 years ago."

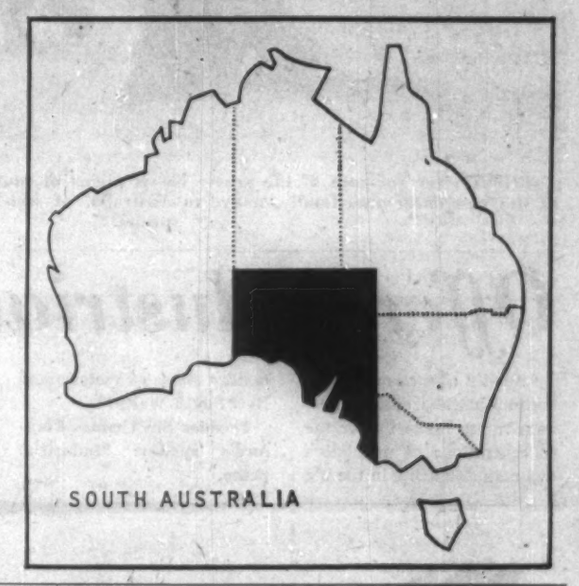
It has been unusually long, Sir Thomas admitted, since South Australia had a really bad season. The graziers and farmers have accumulated pretty satisfactory reserves. Nevertheless the essential difference between now and 1938 is the great expansion of secondary industry.

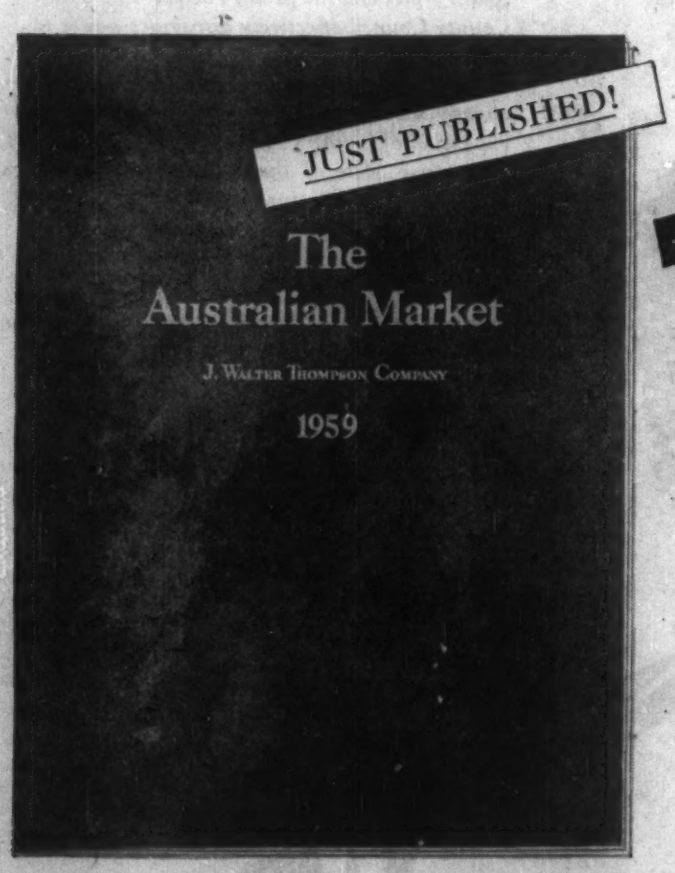
A bad year on the farm cannot now knock out all the props supporting the economy.

It is serious enough, everyone knows. But here, as on the Canadian prairies, it is offset in considerable degree by all the industrial activity, the mining and the tertiary services which all keep rolling.

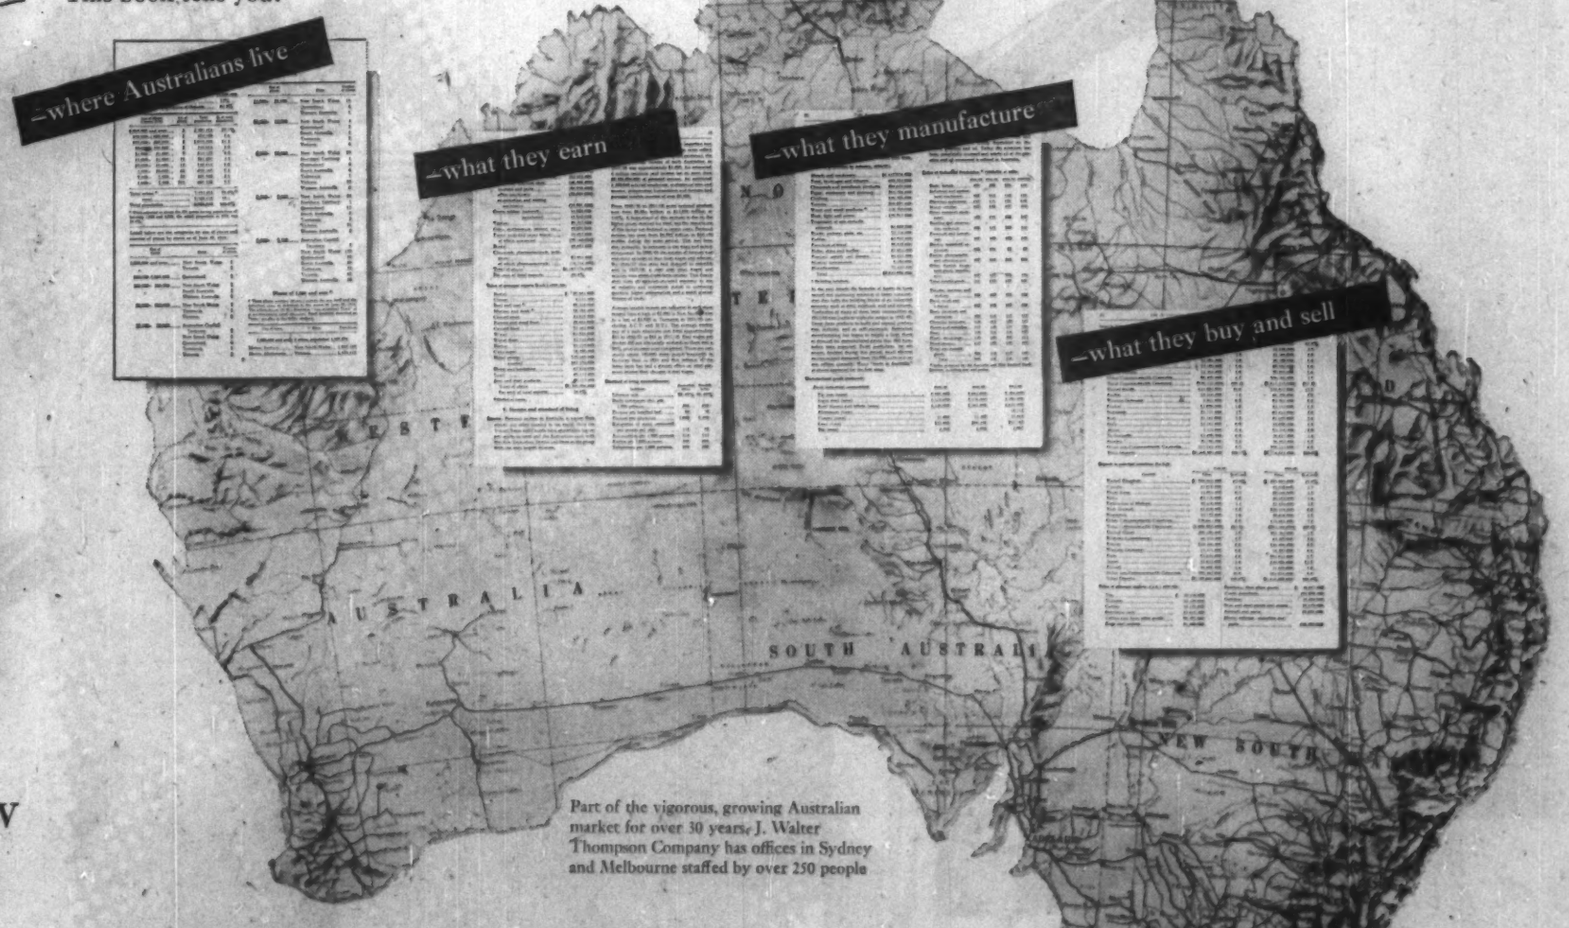
Throughout his 21 years as premier, Sir Thomas has always been dedicated to the promotion of secondary industry, and what greater vindication could he find than this year's drought?

Playford has been so successful in stealing the thunder of his Labor opponents that he has been called "the most successful socialist in Australia".





This book tells you:



Part of the vigorous, growing Australian market for over 30 years, J. Walter Thompson Company has offices in Sydney and Melbourne staffed by over 250 people

Tells you what you need to know for the most effective marketing in Australia

Here are new marketing facts about the dynamic Australian market—10 million people with money to spend *and the desire to spend it!*

The wealth of information in this new publication reflects 30 years of intimate experience in the Australian market by the J. Walter Thompson Company.

Where do Australians live? What do they earn and spend? What do they produce? Sell? Buy?

What is *your* marketing future in this rich and growing market?

Just published, THE AUSTRALIAN MARKET gives you the answers along with countless other facts essential to the most successful marketing Down Under.

Newest of the continuing World Markets Series by J. Walter Thompson Company, this 40-page publication contains the most up-to-date marketing information available, in many cases including 1959 figures.

Today, Australia is one of the world's wealthiest markets; its per-capita income and living standards rank among the highest in the world.

From 1949 to 1958, Australia's gross national product rose 110% ... while personal income also more than doubled.

U.S. private investment in Australia is growing rapidly, too—tripled from 1950 to 1957—now approaches one billion dollars.

And U.S. earnings—at 14 per cent on total investment—make Australia one of our most rewarding markets.

If your company is among more than 900 American firms with subsidiaries, branches or affiliates already in Australia—or is considering this market for the future—you will find that THE AUSTRALIAN MARKET will be an invaluable aid in your planning and preparations.

While they last, we will be happy to send you a copy of THE AUSTRALIAN MARKET *free*. But, you must order now. Already, over half of the copies have been reserved. Mail the coupon.

J. WALTER THOMPSON COMPANY
offices in the major markets of the free world

New York, Chicago, Detroit, San Francisco, Los Angeles, Hollywood, Washington, D. C., Miami, Montreal, Toronto, Mexico City, San Juan, Buenos Aires, Montevideo, São Paulo, Rio de Janeiro, Porto Alegre, Recife, Santiago (Chile), Lima, London, Paris, Antwerp, Amsterdam, Frankfurt, Milan, Johannesburg, Cape Town, Durban, Port Elizabeth, Salisbury (Southern Rhodesia), Nairobi, Bombay, Calcutta, New Delhi, Madras, Kanpur, Bangalore, Karachi, Colombo (Ceylon), Sydney, Melbourne, Tokyo, Manila

MAIL THIS COUPON

ANCIENT river red-gum of the grassy basalt plains of southern Australia is a member of the vast eucalyptus family, native to Australia, of which there are more than 500 species.

Offer Industrial Peace

"What attractions can South Australia offer to new industry to make up for the concentrations of population and manufacturing in the big eastern states of Victoria and New South Wales?"

Premier Sir Thomas Playford's answer: "Industrial peace."

"The average working time lost by workers in South Australia," he claimed, "amounts to one half-day every seven years.

"In New South Wales," he went on, "the comparable figure is 100 times as great (50 working days each seven years), and in Victoria it is 95 times as big (47½ working days each seven years)."

The record is remarkable.

Present population is put at about 925,000.

Nearly a third — 300,000 — of these have been added since the war.

Almost exactly half the increase is due to immigration.

Here are some other rates of 20 years' growth: Factory employment, plus 112%; number of factories, plus 97%; factory wage bill, plus 853%; value of factory production, plus 827%.

Price increase over the period is put at 275%, most of the change occurring before 1954.

In the years since the war the available labor force has grown less than the total population. The bulge was in the low age groups.

In the next few years this will be reversed. The postwar babies will soon be demanding jobs. To provide them the state government is relying on the continued expansion of industry.

Here are some of the major features of post-war development.

● **Iron ore:** The great open-pit mines at Iron Knob, near Whyalla provide the major supply for the Australian steel industry.

In the 12 months up to May 31, 1959, two open pits supplied 3,371,000 tons of rich ore. Their total output has been better than 67 million tons.

Although Australians often boast of their resources in iron ore — with deposits of equal richness in West Australia — they are being depleted much faster than anybody expected. In this year's address to the annual meeting of the **Broken Hill Co.** in September, the chairman of directors, Colin Syme, said:

"It appears to be only too clear that we must expect our iron-bearing raw materials to cost us much more in the future."

● **Whyalla:** Originally just a port for loading iron-ore, Whyalla is becoming a major manufacturing centre. Already it has major shipbuilding yards and blast furnaces. It is to become the centre for a new integrated steel industry.

B.H.P. Ltd. and the South Australian government have agreed on plans which involve:

- **Enlargement of the existing blast furnaces** to produce iron adequate for the new steel plant;
- **A new steel-making plant,** using an oxygen process instead of an open-hearth plant;
- **A mill for modern structurals** and bars, which will be supplied with billets from the N.S.W. plants of B.H.P. until adequate steel-making capacity is constructed on the spot;
- **A merchant mill** capable of rolling a wide range of sections.

● **Shipbuilding:** The B.H.P. shipbuilding yards at Whyalla are just starting to build an oil tanker of 32,250 tons, which will be the biggest vessel ever built in Australia. It is to the order of the Australian oil distributors, **Ampol.**

● **Electronics: Philips Electrical Industries Ltd.,** subsidiary of the famous Netherlands company, opened a new factory at Hendon, S.A., in the last few months, which is making transistors. It already had a plant employing 2,500 people.

● **Oil, metal smelting:** On tidewater 15 mi. south of Adelaide a further addition is planned to Australia's oil refineries in the form of a modern £16 million plant at Hallett's Cove. This is an investment of **Standard-Vacuum,** in addition to their present big refinery at Altoona, Victoria.

Port Pirie, across Spencer Gulf from Whyalla, has already huge smelters, producing lead (190,000 tons annually), silver (seven million oz.), gold (6,000 oz.).

Also manufactured there are sulphuric acid (50,000 tons) and uranium oxide (to an annual value of £10 million).

Other mineral production includes salt, gypsum, talc (enough for Australia's requirements), barytes, limestone and dolomite for the steel industry.

● **Power:** Solution for the problem was found by following Victoria's example and undertaking extensive development of a big deposit of brown coal at Leigh Creek, nearly 400 mi. north of Adelaide.

The state having so little in the way of natural power resources, it is remarkable that the intelligent use of Leigh Creek's brown coal has enabled South Australia now to claim that its power is not only plentiful, but among the cheapest in Australia.

● **Water:** Water is equally crucial, and a dry year like the present one emphasizes the problem.

The lack of water is South Australia's greatest deficiency — even against the other Australian states, few of which are well supplied by Canadian standards.

Adelaide, with more than half the state's population (560,000 out of 925,000), presented the first difficult case.

The hills which surround the city could provide six reservoirs with a capacity of 24,000 million gal.

But this isn't enough, where rainfall is as chancy as it is here. They held only 5,500 million gal. this September, and even then some of it had been pumped in from the Murray River.

It came through a 50-mi. pipeline which was built to tap the more assured flow of the Murray River at a place called Manorum. But pumps are needed to lift the Murray River water over the height of land which separates it from Adelaide.

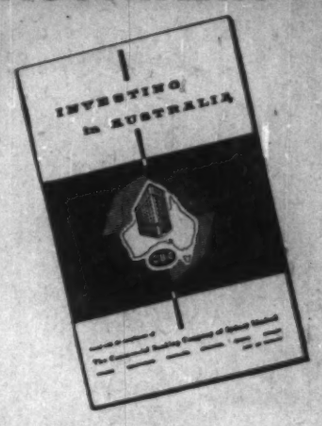
In normal years, or years of good rainfall, the Murray-Adelaide pipeline has to be used only at low periods to supplement the local supply collected in the six local reservoirs.

In this year of drought it had to be used at full capacity even in July, which is the midwinter month here. It has been going ever since, and it will be needed at least until the end of April.

The daily cost of pumping is £1,500, or about $3,300. If pumps have to be worked all-out for 10 months in the year, the cost comes to nearly $1 million—on top of all the usual operating expenses —for this one pipeline.

For all the pipelines, the state budget for the present fiscal year (July to June) has allowed £557,000 more than the Water Supply Department had to spend last year.

AUSTRALIA — Opportunities for Investors



Great industrial development is taking place in Australia. The nation's economy is prosperous and is expanding.

Our illustrated booklet "Investing in Australia" gives brief but authentic information on subjects such as the geography, government and population of Australia; its mineral resources, manufacturing, agricultural and pastoral industries: the legal and practical requirements for establishing a business: taxation, exchange control and import licensing.

The booklet has been specially prepared to answer the questions of those interested in investing capital in Australia or establishing a business there.

We shall be pleased to send a free copy to all who ask for it.

THE COMMERCIAL BANKING COMPANY OF SYDNEY LIMITED

ESTABLISHED 1834

HEAD OFFICE: 343 GEORGE STREET, SYDNEY, N. S. W.

BRANCHES THROUGHOUT THE COMMONWEALTH OF AUSTRALIA AND AT LONDON

Power Unlimited in Sydney "Down Under"!

Sydney is the busy hub of major industry in New South Wales and the South Pacific. The Sydney County Council effectively distributes power to over half a million industrial, commercial and domestic customers; and is rapidly extending its already widespread network. The tremendous expansion of industry in this, the largest and most progressive State of the Australian Commonwealth, has vital significance for Canadian manufacturers who are considering the outstanding potentialities of the South Pacific market.

The Sydney County Council will gladly provide industrialists and others with detailed information concerning power supply within the great metropolis of Sydney.

The Sydney County Council

Queen Victoria Building, George Street, Sydney, New South Wales, Australia.

SC179/59

THE STATES

FACTORY of Associated Pulp & Paper Mills Ltd. at Burnie, Tasmania. Tasmania provides much of the paper for the other Australian states.

Tasmania

Competitor for Canada

Canada has a special interest in the little island state of Tasmania.

Although it is smaller than New Brunswick in area and has only about two thirds of New Brunswick's population, it is the only Australian producer of two commodities which directly threaten two of Canada's biggest exports: Aluminum and newsprint.

Both are essentially wartime developments which did not really get into production until some time after the war.

- **Aluminum:**

It was 1948 before the Bell Bay plant of the Aluminum Production Commission got started with 90% of its finance from the Commonwealth government and 10% from Tasmania.

The Bell Bay potlines, which have been producing about 13,000 tons of aluminum ingot per year, rely on Tasmania for nothing but water power. The bauxite is imported from New Guinea and as far away as Malaya. The Tasmanian power, though by far the cheapest in Australia, is still considerably more costly than the power used by the Canadian industry.

Within the last few months, the Aluminum Production Commission was authorized to increase the capacity of the Bell Bay plant from a nominal capacity of 10,000-11,000 tons (actually about 13,000) to a nominal figure of 18,000 tons per year. (This is out of an Australian consumption of about 30,000 tons).

In the Senate in Canberra recently the Minister of National Development, Sen. Spooner said:

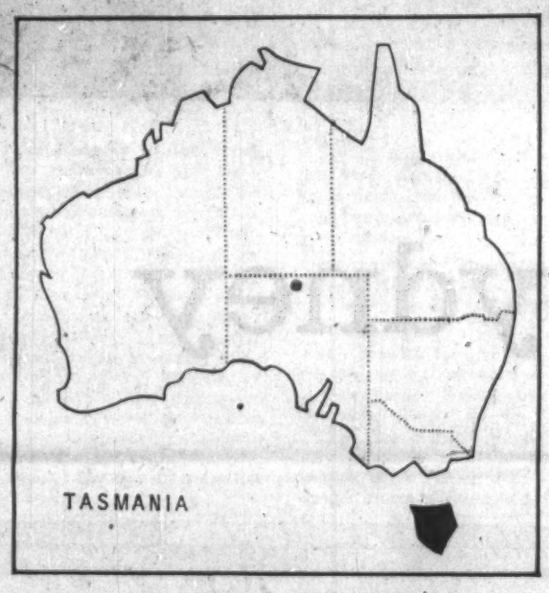
"We have agreed with the Tasmanian government to increase the plant to a capacity of 18,000 tons a year. We are also testing out the possibility of encouraging private investment, so that we may lift the level of production to 28,500 tons per year.

"That seems to be about the production that would be needed to make it an efficient, economical plant."

The Tasmanian government clearly realizes that its stake in the aluminum plant is more than the £A1 million of its investment. It is the sale of its water power and the employment of its citizens. Ministers of the state make it clear that they hope:

- **to get the capacity** of the present plant increased enough to supply the whole of Australia's present requirements of 30,000 tons a year — expected to increase sharply.
- **to get the huge deposits at Weipa,** in Northern Queensland, committed to the Bell Bay plant, rather than using either the local power of Queensland or the rumored supply of cheap power in New Guinea.

- **Newsprint:** First Australian production of newsprint started during the war when any reliance upon overseas supplies appeared to many Australians to be too hazardous.



The company, **Australian Newsprint Mills (Pty) Ltd.**, had been formed in 1938 with the major newspapers of Australia as shareholders.

Leading promoter was the late Sir Keith Murdoch, of the Melbourne Herald chain, associated first with the Fairfax family, owners of the Sydney Herald. They were soon joined by the Adelaide, Brisbane, Perth and Hobart publishers.

The Tasmanian Government put up £A250,000 ($550,000) to help them get started.

After the war, with the state government paid off and preference shares sold to the public, the (Pty) was dropped from the name and **Australian Newsprint Mills Ltd.** became a public company. But all the ordinary shares were (and are) still held by the newspapers.

Now means have been found to produce newsprint from Tasmanian's native hardwoods, and the plant (located at Boyer) has a capacity of 80,000 tons of newsprint per year. This is less than one third of Australia's requirements. Canada still supplies more than one quarter of them.

Some evidence that the Tasmanian production has not proved entirely competitive is provided by the absence of plans to extend the industry, and the growing tendency to look to New Zealand.

The threat to Canadian newsprint exports, according to the best evidence, comes not from the local mill but from the economic success of N.Z.'s experiment in making newsprint. The Australian government is always inclined to give a helping hand to its neighbor, if it can do so, in trade matters.

If, as now believed here, New Zealand newsprint will be fully competitive in price, this will remove all scruple about increasing Australian purchases from there rather than from Canada.

Island Offers Contrast

It is tempting to compare Tasmania with Prince Edward Island for three very simple reasons:

- **It is the smallest** of the states.
- **It is an island.**
- **It is in many ways** very unlike the rest of the country.

But the comparison will go no further. This island is 10 times as big as P.E.I. (though about 1/40 the size of Western Australia). Its population, at around 340,000, is more than three times P.E.I.'s, and about 3% of the Australian total.

But above all its economy presents a complete contrast. It is one of the most diversified of all the Australian States.

The first contrast between Tasmania and the continent of Australia is that Tasmania is wet. Half the island — the mountainous and mineral-bearing western half — gets an average rainfall of more than 40 in. — even as much as 130 in. occasionally. Nearly all the rest of it gets between 30 in. and 40 in.

The other areas of Australia which get this much rain are mostly around the northern coasts. They are tropical districts and their rains are monsoonal. That is to say, they are concentrated in a short and violent "wet season" in the summer months.

Tasmania's rain is spread around the year.

This is one reason why the scenery often seems reminiscent of the British Isles. Scotland for the mountainous parts, Devon, perhaps, for the others. The nearest Canadian comparison is Vancouver Island or the lower mainland of B. C.

It is also the reason, of course, why Tasmania is the only part of Australia with bountiful hydro-electric power. It boasts that it can supply power at about 40% of the price in any of the mainland states.

This power supply accounts entirely for the location of Australia's only aluminum smelters at Bell Bay, on the north coast and it was a considerable attraction to many of the others.

But further bounties of nature were needed to account for the wide diversification of production here:

- **The island has rich agricultural districts,** producing valuable fruits and vegetables, and supporting a canning industry. Now there is the beginning of a frozen food industry too.
- **It has a remarkable variety of minerals.** Actively and profitably mined are copper, lead, silver-lead, tin, zinc, tungsten. Zinc and several of the other metals are also being processed in the island.
- **It has valuable forests** of native hardwood, consisting of several varieties of eucalypt. From these hardwoods Australian scientists and technicians have learned how to make paper. One plant at Burnie in the north of the island makes fine papers, hardboard, and specialty papers. Another plant, controlled by the newspapers of Australia, makes newsprint — the only newsprint plant in the country. Plans are also being made for a kraft mill.
- **Over more than half the area of the island,** sheep are run, and the climate is claimed to give an especial fineness to their wool.

Abundant Power Builds Industry

E. E. REECE
Premier of Tasmania

Tasmania is notable as the location of key secondary industries which are vital to the Australian economy as a whole; in some cases, these industries are the only ones of their type in the Southern Hemisphere.

The exploitation of relatively abundant water resources for hydro electric power purposes together with other natural resources has led to the establishment in the state of important industries such as the processing of refined metals of copper and zinc and the manufacture of sulphuric acid, aluminium ingots, calcium carbide, titanium dioxide, non-ferrous strip, newsprint, paper pulp and quality papers, cement and a variety of textile products.

Tasmania, in common with the rest of Australia, can look forward to an expanding economy in the future.

Like every other state, it is making every effort to promote the establishment and expansion of secondary industries.

As with other states, Tasmania has certain advantages to offer which are peculiar to its natural resources and geographical location.

Prospective industrial development in Tasmania will be roughly in two categories:

- **The further development of local natural resources** will bring exporting industries located near the resources being exploited.
- **The steady growth in the size of the local market** will encourage the establishment in the state of branch factories of Australian industries which at present export to the state.

With natural resources, the state's forestry areas, mineral deposits, and water resources offer encouraging prospects for profitable investment.

The well-known Australian companies of **Associated Pulp & Paper Mills Ltd.** and **Australian Newsprint Mills Ltd.**, are pushing ahead with expansion plans concerning quality papers and newsprint respectively.

Another famous company, **Australian Paper Manufacturers Ltd.**, has now become interested in the state. This group is intensively investigating the possibilities of establishing a paper pulp industry in Southern Tasmania which will export pulp to Victoria for processing into commercial paper.

The state's hardwood timber industry will also expand as local companies are converting their machinery to more automatic processes to supply better quality building timbers for the Australian and North American markets.

In the mineral field, the Rio Tinto, Electrolytic Zinc, and Mount Lyell groups are conducting extensive investigations. These moves offer prospects of further industrial development for Tasmania in the production of zinc, copper, tin, and a new industry based on the commercial exploitation of iron ore deposits.

The state's water resources give it an advantage over the rest of Australia in the form of water supplies for industry and hydro-electric power potential.

Tasmania could supply bulk hydro-electric power to industrial undertakings at barely 40% of the lowest mainland electric power rates. Moreover, the state government is expanding its hydro-electric scheme.

Present installed capacity of 683,700 hp will increase to over 1,250,000 hp by 1966, thus providing scope for industrial development where power costs are a large proportion of total costs.

Cheap power from the state's hydro-electric scheme offers the prospect of new industries in the electro-chemical and metallurgical field.

The increasing population of Tasmania offers growing markets for consumer goods. The present population of the state is about 336,000. By 1969 it is estimated that it will be about 400,000, a growth of nearly 20%.

As this population increases, the Tasmanian market will become large enough, for particular lines of goods, to warrant the establishment of branch factories in the state.

This will apply to those goods which have high transport costs, and are made from materials which are either available locally, or can be shipped into the state at a lower cost.

Examples of this type of industrial development which has already taken place are the manufacture in the state of reinforcing steel mesh, wire mesh, tubular steel furniture, paint, and paper products.

The prospects of industrial development in Tasmania are enhanced by a revolution in Australian transport. A new "drive-on drive-off" car ferry recently started a regular run between Melbourne and Devonport on the northwest coast of Tasmania.

This ferry has some provision for the handling of freight on road transports, but following it there will be another one, already under construction, to specialize in freight vehicles.

The ferries will link Tasmania to the road network of the Australian mainland.

These new developments in communications with the rest of Australia will bring lower transport costs. Thus a combination of cheaper outward shipping costs and local cost advantages in some respects, will stimulate the development of industries which export from Tasmania.

For example, the prospects of the vegetable processing industries in the northern part of Tasmania will become better as access to mainland markets becomes cheaper.

Thus the fertile agricultural areas in the northwest and northeast will become a more important source of supply of both processed and perishable foods for the metropolitan markets of the mainland.

The state's livestock population will also play its part. Suitable climate and soils provide Tasmania with the means of raising high quality livestock in sufficient numbers to encourage the establishment and expansion of abattoirs and associated meat works in the state.

Indeed it can be said that Tasmania has prospects for profitable industrial development in industries based on local natural resources, and in branch factories to cut freight costs on goods at present shipped into the state.

Sydney, largest city in the Southern Hemisphere — industrial heart of Australia

The Future of Sydney

IS LINKED WITH

Investors — This big, modern undertaking has served Australia's biggest city for 122 years. Over 40,000 Australians have invested in the A.G.L.

In addition to supplying over 350,000 domestic customers, the A.G.L. is the life-blood of many great industries located here. Today the A.G.L. operates the largest plant in the Southern Hemisphere for the manufacture of towns gas. High quality service, stable prices and virile, forward-thinking policy ensures that as Sydney grows, so does The Australian Gas Light Company.

THE AUSTRALIAN GAS LIGHT COMPANY

477 PITT STREET SYDNEY, NEW SOUTH WALES, AUSTRALIA

MELBOURNE is a city of prosperous solidity, an industrial city providing much of the force of the industrial revolution which has transformed Australia.

Victoria

Financial Headquarters

Henry Bolte (pronounced with two syllables) who has been Premier of Victoria since 1955, led the Liberal-Country parties to power thanks largely to a split in the Labor ranks. He was a small grazier in rural Victoria.

Now as head of the government of Australia's most industrialized state, he talks about high finance as though he had been born to it.

It isn't surprising that finance should be much on Mr. Bolte's mind.

Melbourne is the financial capital of Australia in the same sense as Toronto is of Canada—which means that the title will be disputed in both cases by Sydney or by Montreal.

But here is the head office, for example, of the great industrial empire of **Broken Hill Pty.** which makes steel in New South Wales, builds ships in South Australia, and conducts a variety of subsidiary enterprises in most of the States.

A majority of the seven big trading banks have their head offices here, though the **Commonwealth** (Central) **Bank** and its trading offshoot are in Sydney, and so is the biggest bank of all, the **Bank of New South Wales.**

Melbourne is not yet under the spell of U. S. influence. It is still trying to attract U. S. capital and U. S. business in the placid belief that these will bring faster growth and richer returns without upsetting the habits of thought which Melbourne still cherishes.

The U. S. capital is flowing in fast. If you drive down the main easterly exit from Melbourne, through Dandenong, you could imagine yourself to be on the Queen Elizabeth Highway or the Kingston Rd.

For 12 mi., which only a few years ago ran between green fields, you pass an almost uninterrupted row of new factories:

International Harvester, General Motors, Volkswagen (an assembly plant), **Heinz** and many more.

Any gaps between factories are filled with acres and acres of new houses looking like low boxes.

They are mostly bungalows, generally of brick—or at least brick veneer over a wooden frame. The roofs are no longer of corrugated iron like the early Australian houses. Now they are of tiles made either from terra cotta or cement. It's not unlike north Toronto, though, each house here stands in its own fenced lot.

No basement, you notice, because no "central heating". When it's cold down here it's the same sort of damp cold as in England and like the English the Australians rely, with few exceptions, on open fires to keep at least one side of them warm.

But both cold and heat are normally moderate. In July, which is the height of winter, average temperatures vary between 56 deg. F and 42 deg. F. The highest and lowest recorded in a century were 69 and 27. But 17 days out of the 31 are rainy, and more than six of them are foggy.

Total annual rainfall is about 26 in., about the same as in London, England. And in a country cursed by dryness that is one of the important reasons for Victoria's prosperity.

It has been as high as 110 deg. around Christmas time. It was 104 for a spell of about two weeks last year. But the average maximum for December is a little over 75 and for January nearly 78.

Housing is scarce in Melbourne. There are some new little bungalows advertised for no more than £3,000, or $6,500. More usually a two-three bedroom home, built for sale by a private builder, will cost £4,000-£5,000.

That's only $8,600-$10,300 at current official rates of exchange. But in relation to average earnings and cost levels it looks quite as high as in Canada.

Melbourne in some ways has made better use of its space than Toronto. It has kept much wider streets. Many—perhaps even most—of the main thoroughfares are dual carriageways with a plot of grass between them.

It has nothing quite like the new Canadian through highways because it never had equally narrow streets to get congested. But the Dandenong Rd., for example, is being widened now to provide a dual carriageway far out beyond the original one.

On the other side of town, going around the western side of the bay on which Melbourne stands, Geelong is growing up like a Hamilton. There is still green country between them, but already it seems inevitable that the 45-mi. stretch of the Prince's Highway will soon be built up as the Queen Elizabeth Highway is between Hamilton and Toronto.

The airport, at Essendon, is only 5 mi. from the centre of Melbourne, but it is already too congested to handle a full flow of jet traffic. A new and larger site is being sought which inevitably will be as far away as Malton is from Toronto.

THE STATES

'Victoria Market Expands Rapidly'

HENRY E. BOLTE
Premier of Victoria

Victoria, as a leading industrial and primary producing state, will be called upon to help maintain the stability and security of the nation's economy.

And as our economy will become more and more dependent on our ability to manufacture, sell and export secondary goods, Government planning for the future is largely directed toward intensified industrial development.

Victoria is the smallest in area of the Australian states, except for Tasmania; but it has the second highest population, and leads in many fields of manufacture and primary production.

Australia is planning to double its present population of 10,000,000, possibly within 20 years.

Victoria is absorbing over 44% of the total migrant inflow into Australia.

Its population is growing faster than New South Wales which is taking fewer migrants.

The Victorian market is expanding more rapidly than any other state.

Although we are taking the majority of migrants we have been able to maintain a high standard of living and one of the lowest unemployment rates in Australia.

The latest figures show that Australia had 1.5% of its work force unemployed. In Victoria, the figure was 1.3%.

As industry provides employment for the additional workers, our industrial development must be proceeding at a very rapid rate.

Australia must maintain a high level of migration to gain strength as a nation.

It cannot provide the necessary jobs for the newcomers out of its own resources and still keep our high standard of living.

So we must look to outside capital; and we offer ourselves as a place for sound, gilt-edged investment.

Any investor first asks: "What have you to offer?"

Victoria has:

- **It has a government pledged to free enterprise.** And it is used to stable government.
- **It is geographically handy** to supply markets and possible export markets.
- **It has a growing consumer demand** above any other State.
- **It has a rapidly increasing work force** and a very low unemployment level.
- **Employer-employee relations are good** and industrial unrest at a minimum.
- **It has a climate conducive to high productivity.** We have no extremes of heat and cold.
- **It has an excellent** transport system.
- **Taxation is reasonable** and essential services are available at one of the lowest rates in Australia.

Victoria is fast becoming the hub of Australia.

Melbourne is already the financial hub of the nation. It is the home of the leading underwriters. It has a modern and active stock exchange, with a rapidly growing list.

Victoria is also the headquarters of the Australian motor industry which is now expanding largely.

This is typical of the development in all forms of industry.

PERSONALIZED ASSISTANCE

A special projects section, known as "Division of State Development," has been established in the Premier's Department. It is manned by men experienced in industrial matters. And they are ready to pass along all they know.

If you are looking for a site, they will take you there.

INSTALLMENT FINANCE

Hire purchase has greatly assisted growth here of consumer lending.

The latest official estimate puts the outstanding balances of borrowers at more than £100 million — a very sharp rise from the £20 million of 1952-53.

Retail sales have increased in the State from £588 million in 1952-53 to £372 million.

THE FUTURE

I believe the future must bring bright prospects for anyone who wants to develop his business with the States. But not, perhaps, right now.

To the north of Australia, lie the vast countries of Asia which are looking to us to supply them with capital and manufactured goods.

I am confident that Australia can supply them. Victoria, one of the nation's leading workshops, is developing to help fulfil that objective.

Already we are exporting consumer goods to Asia. The market is there and it is up to us to capture more of it.

Our geographical position makes us an ideal "springboard" to service Asia with manufactured goods.

We have the skilled tradesmen and the army of artisans is growing daily. We are fast obtaining the "know how." What we need most is capital.

In recent years, as the inflow of overseas capital got into fairly high gear, Victoria gained the lion's share of these funds.

British capital has always dominated the inflow. But we notice growing awareness in North America of the possibilities this country offers. This also applies to some European countries.

That's why the flow of North American and European capital has shown a marked increase.

The march of capital from world countries has been diverted south to Australia.

Victoria believes it offers the soundest prospects for Australian investment.

We have the potential, we have no where near reached the limit of our development, and we would be pleased to have you join us in our march toward greater prosperity.

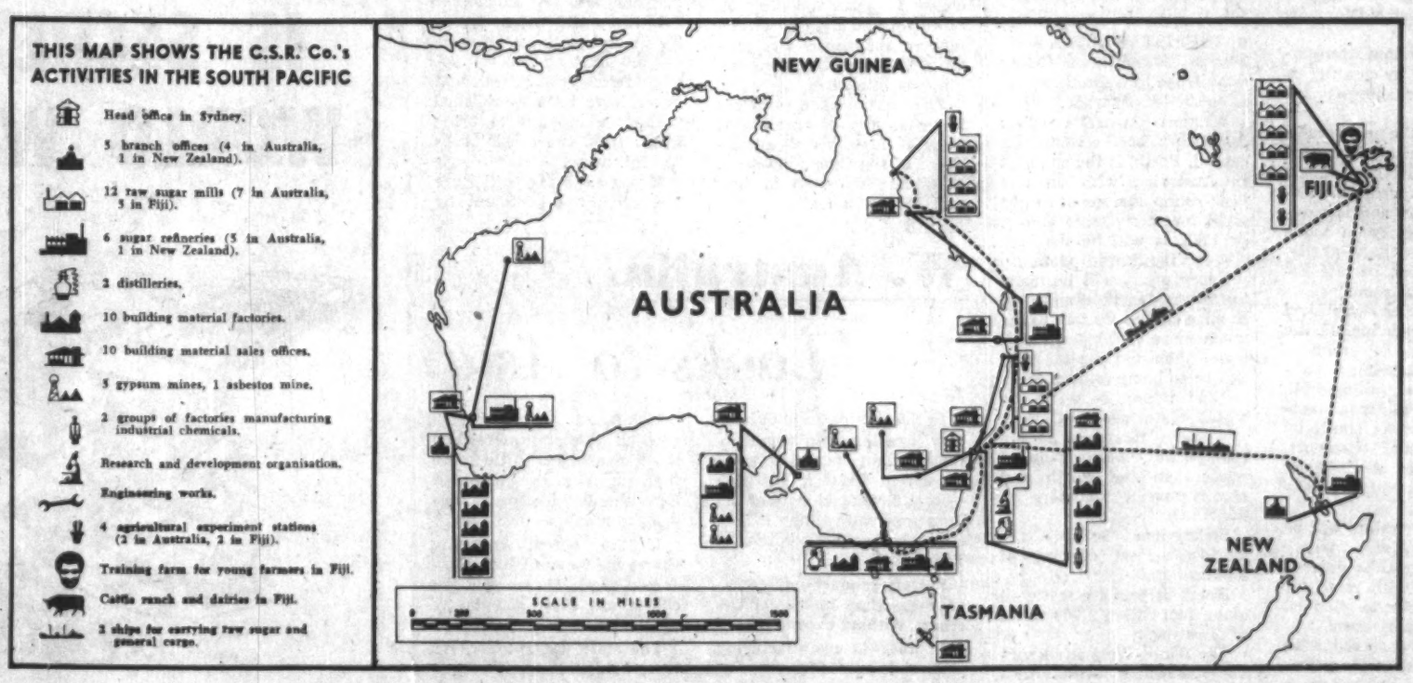
Canada is a valued customer of Australia's sugar industry

Canada bought 112,000 tons of raw sugar from Australia in 1958, or about 9 per cent of Australia's total production of raw sugar.

Raw sugar is made from the sweet juices crushed from sugar cane. The sugar cane is grown by 9,000 independent farmers in Australia along the tropical north-eastern coastline.

The farms are small (average size 50 acres) and the farmers do most of their cultivating work with tractors. The sweet juices are crushed from the cane and crystallised at factories in the cane-growing districts.

The Colonial Sugar Refining Company, which negotiates the sale of raw sugar to Canada for the Australian sugar industry, is one of the large industrial companies in Australia. Colonial Sugar makes about 500,000 tons of raw sugar a year in Australia and Fiji, and refines about 600,000 tons in Australia and New Zealand.



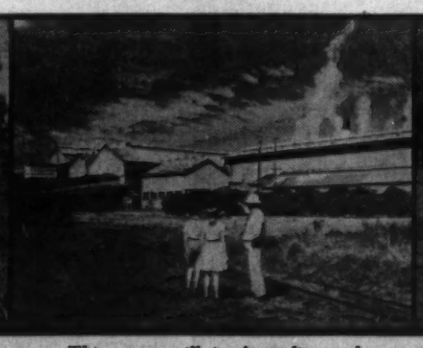
SUGAR CANE

A crop of sugar cane. Average yields in Australia are about 3 tons of sugar per acre.

SUGAR FARM

An Australian farmer cultivating young sugar cane.

RAW SUGAR MILL



This sugar mill in Australia crushes 700,000 tons of cane a year.

BULK STORAGE

Storage shed at an Australian sugar port. It holds 150,000 tons of raw sugar.

BULK HANDLING

Raw sugar being unloaded from a bulk sugar ship at C.S.R.'s Sydney refinery.

WESTERN GATEWAY to Australia is Fremantle, 12 mi. from Perth. The port is building facilities for 45,000-ton liners. View looks toward Perth along the Swan River.

W. Australia

Accent on Enterprise

DAVID BRAND
Premier of Western Australia

BRAND

In Western Australia, the accent is on private enterprise. The State Government, controlling annual expenditure approaching £A100 million, is devoting its resources to creating a favorable climate for industrial, rural and commercial investment.

Private enterprise has pioneered and built Western Australia, with Government co-operation.

And in this Western Third of the Commonwealth, covering nearly one million sq. mi., there are still as many magnificent opportunities for those with pioneering spirit as for those seeking other good fields of investment.

We are big enough for tremendous growth, and my government is committed to a policy that will vigorously foster it.

Six major fields of growth are being planned for in the years ahead — industrial investment, agricultural expansion, development of the tropical North-West, the tourist trade, mineral resources, and developmental public works.

These are some of the details:

• **INDUSTRIAL INVESTMENT. Western Australia is making a strong bid** for new industry.

The State is now strengthening its hand by creating an industrial development authority.

Already, in the past decade, secondary industry has made big strides. It has almost doubled its importance within the economy and is moving toward parity in value of output with the vital primary industries, despite rapid rural expansion.

New industries established in the past decade include the £A40 million BP refinery (Australia's biggest), a merchant bar steel rolling mill, one of the world's most modern cement works (built by Rugby Portland Cement), and a range of other heavy and light industrial establishments.

Industrial investors will be offered incentives, where needed. They can be assured of good sites with room for expansion, close to planned workers' housing areas.

They will be served with good roads and ample power and water. The work force is skilled and adaptable.

• **AGRICULTURAL EXPANSION. Western Australia has 23 million acres of cleared land producing wool, grain, fruit and many other products,** but millions of acres in good rainfall areas still await capital for development.

There is an immense opportunity here. Meanwhile, clearing goes ahead at the rate of 600,000 acres a year.

• **NORTH-WEST DEVELOPMENT. A stimulating challenge lies in the pastoral North-West of Western Australia** — and we intend to meet it.

The northern sector, known as the Kimberley (133,000 sq. mi.), offers the richest prospects. Drenching summer rains cascade into rivers and gorges to run wastefully into the sea. This water is the key to its future.

By progressively harnessing the rivers we propose to promote a major development of agriculture and of associate industry.

A £A3 million diversion dam will be constructed on one of the major Kimberley rivers, the Ord, with Commonwealth aid.

The next stage, it is proposed, will be a £A16 million Ord River Dam with storage capacity for three million acre-ft. of water and a built-in hydro-electric power station.

Dam sites on three other big rivers are being investigated.

• **TOURIST TRADE. A State Tourist Authority is being established** to vigorously promote the tourist trade.

Western Australia offers Australia's best climate. Its capital, Perth, is the sunniest in Australia, with an all-year-round average of nearly eight hours sunshine a day. In 1962, it will be the host city for the Empire Games.

Every effort will be made to persuade thousands of Empire Games visitors to see much more of Western Australia than the capital city, and to go home remembering — and telling — what the whole State has to offer.

Western Australia is big enough for warm tropical winters in the North and Mediterranean summers in the South.

Springtime brings the world's richest offering of wildflowers.

Beach resorts are scattered along more than 1,000 miles of coastline.

The South-West offers virgin hardwood forests with big stands of giant trees and secluded trout streams.

My government believes the Western Third of the Commonwealth has at least one-third of Australia's tourist attractions.

We want to attract one-third of Australia's growing influx of international tourists, and every effort will be made to stimulate commercial interest in improving tourist amenities.

• **MINERAL RESOURCES. World demand for minerals has increased interest in the largely untapped resources of Western Australia,** which is a highly mineralized State.

Already, gold has played a major part in the economy. But the accent today is on the discovery and development of minerals to meet industrial demands.

The Mines Department carries out a continuous geological survey which has led to the interest of international companies in iron ore (several major high-grade deposits and many smaller ones), blue asbestos (probably the world's biggest deposit), manganese (Australia's major source), and the rare minerals like tantalite, beryl and titanium.

• **DEVELOPMENTAL WORKS. The Government recognizes that a progressive works program** is essential to economic progress.

Power and water supplies are maintained at a level capable of meeting big new demands immediately.

A number of outports, already equipped for world shipping, are being constantly improved, and the major port, Fremantle, is currently building a new passenger terminal to cater for 45,000-ton liners expected next year.

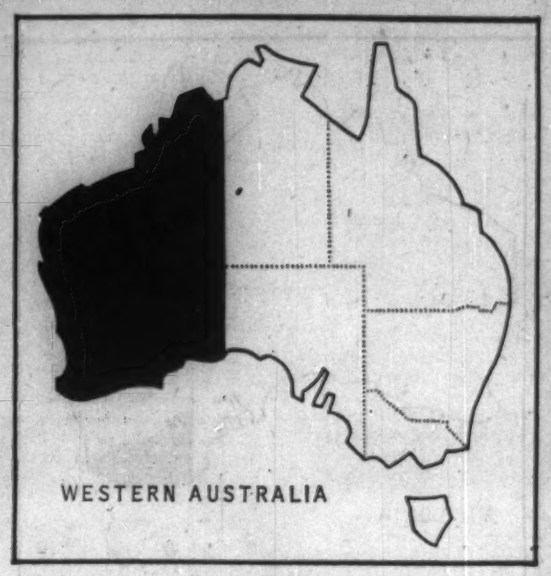
Since Second World War, a comprehensive water scheme has greatly extended piped water supplies to country areas, and preparations are now being made for a major extension of this scheme.

Western Australia is striding rapidly toward economic maturity, and its economic pulse is quickening in the current financial year.

The rate of population increase is again showing an upward trend and this will be further influenced by government policy to raise the migrant intake.

The next decade promises to be an era of accelerated growth for this Western Third of the Commonwealth. Investors who step in first will benefit most.

THE STATES



Increased Output Attracts Settlers

"The western third of Australia," as Premier Brand of Western Australia likes to call it, has nearly one third of the area of the continent, but only 7% of its population. Most of that 7% (715,000 people) is in a small area south of Perth in the remotest southwestern corner of the country. It is separated from the rest of Australia by 1,400 mi. of emptiness.

Whichever way you come, the long trip across the continent is like traveling across western Ontario, north of Lake Superior, to find only Winnipeg at the end of the route.

There are no further vistas of prairie cities and mountains and B. C. coastal riches — just Perth and the small settlements around it.

The two airlines' daily flights leave Adelaide in the afternoon, arrive in the evening, and fly back during the night. (They're using DC6Bs and Electras.) Their route cuts across the Great Australian Bight and then comes inland near the boundary between South and Western Australia, heading due west over the Nullarbor Plain.

This is a red desert, treeless, very dry and completely desolate.

The air route comes south of Kalgoorlie, the old gold mining town which is the only substantial settlement between here and Adelaide.

It still has a population of 23,000 and produces between 800,000 oz. and 900,000 oz. of gold each year. But it could never have been established without a pipeline to bring water from the coastal hills 325 mi. away.

If you are a man of leisure and cross the continent by train, the **TransAustralian Railway,** operated by the federal government, provides a comfortable, air-conditioned, diesel-powered train from which you may observe the desert to your heart's content.

In contrast to Canada's bleakest stretch of railway around the north shore of Lake Superior, with its continuous snaking curves, the TransAustralian Railway is the straightest track on earth. One stretch runs 300 mi. without a curve.

At last it reaches Kalgoorlie and then everything has to be transshipped. The gauge changes from the standard 4 ft. 8½ in. to the **Western Australian Railway's** 3 ft. 6 in.

Perth is very different from Winnipeg. It is a sea town.

It straddles lovely bays of blue ocean with miles of clean white beaches, and fleets of yachts spreading their billowing sails to the breeze. It is a sunny town all the year round, luxuriant with unique species of trees and flowering shrubs and wild flowers—bolder than Canadians are used to, breath-taking in brilliance.

No frost has ever been recorded here. The lowest official record was 34 deg. F. The winter mean is 56 deg., the summer mean 73. Only in semi-tropical Brisbane, far up the east coast, are the average temperatures a couple of degrees higher.

Nevertheless, some of Western Australia's problems would seem very familiar to Canada's western provinces. It depends even more than the rest of Australia on the export of a few primary products — wool, wheat and meat, particularly — whose prices fluctuate steeply.

This state supplies a surprising 11% of Australia's total overseas exports. But it buys only about half as much from overseas. Last year, for example, it earned an export surplus of £47 million on overseas trade (more than half the value of its exports) but its purchases from the other Australian states came to £66 million more than it could sell them.

In these postwar years determined efforts at development have been concentrated on two major lines:

• **To diversify** the state's production by establishing more secondary industry.

• **To overcome** the natural obstacles of poor soil and inadequate water, to increase production from the land and permit more settlement.

Both efforts have had remarkable success. Manufacturing has contributed a steadily rising income, and increased its share of the state's production from 28% to at least 40%. It has been as high as 45% in years when markets were not too favorable for primary products.

At the same time the area of cleared arable land has been increased from 15 million acres to 23 million. Improved pastures have risen from one million acres to seven million acres. The sheep population has more than doubled — from six million to 13 million.

W. Australia

Looks to Asia

In the first postwar decade, new investment in manufacturing plant increased more rapidly in Western Australia —least developed state of the Commonwealth—than in any other, with the exception of Tasmania.

Factory production increased more than in any of the others, without exception.

In 1948-49 manufacturing produced only 28% of the state's income. In 1957-58 it was 45%.

This is perhaps an overdramatic way of putting it because the fluctuations in the value of wool, wheat and meat largely determine the proportions. They were lower in 1957-58 than in the two previous years, but even in 1955-56 manufacturing accounted for 41% of the state's income—a drastic change from 1948-49.

Moreover, the rise in the value of factory production has been steady year by year. It came to £75.3 million in 1957-58, compared with £21.5 million a decade earlier.

The arguments for establishing industry at this western tip of the Australian continent, so remote from its major market, were highlighted by the £40 million ($88 million) oil refinery or **British Petroleum** at Kwinana.

Kwinana is Australia's biggest oil refinery, and when B. P. decided, a little more than six years ago, to put it here, the decision was a surprise to many people.

If the parent company shares the views of L. R. Gascoigne, the local manager, the choice has been abundantly vindicated.

The state government, it's true, held out some inducement in the form of a new housing settlement, guaranteed supplies of power and water, and so on. But these could certainly have been obtained in South Australia and quite likely in other states too.

What has impressed the management is that it has always got more than the letter of its agreements. It has had willing co-operation from the governments — Labor and Liberal alike. It has a contented and efficient work force and it is delighted with the quality of the young executives it has drawn from the University of Western Australia. (The federal wage awards do not favor Western Australia, because its living costs are relatively high.)

That's all very nice but it doesn't make this site more economic than another.

The first economic justifi-

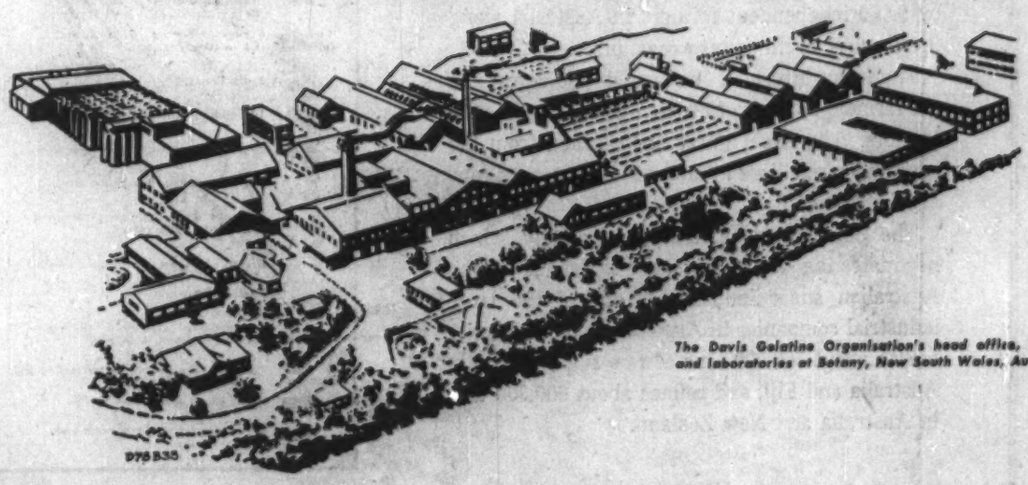
CONSISTENTLY HIGH QUALITY OF DAVIS GELATINE IS SECRET OF GROWTH OF WORLD WIDE ORGANISATION



The Davis Gelatine Organisation's head office, factory and laboratories at Botany, New South Wales, Australia.

THE DAVIS GELATINE ORGANISATION

FACTORIES:
Australia, New Zealand, South Africa, England.

DISTRIBUTION CENTRES:
Canada and U.S.A.

CANADA:
Toronto, Vancouver, Winnipeg, Montreal, Quebec City, Saint John, Halifax, St. John's

U.S.A.:
Davis Gelatine Inc., 375 Park Avenue, New York.
Also at Chicago, Los Angeles, Portland, San Francisco, Seattle.

A manufacturing capacity matched by unrivalled distribution and service facilities makes Davis pre-eminent in world markets

IMAGINATIVE AND CONSTANT RESEARCH allied with rigid quality control has made Davis Gelatine the finest product of its kind. Recognition of this fact both by the general public and by manufacturing concerns using gelatine as a raw material has led to a rapid expansion of production and distribution. Along with its growth has gone a unique development of laboratory and research techniques that enables Davis to provide manufacturers with the answers to production problems. If *you* have a problem involving the use of gelatine as a raw material, you are invited to get in touch with any of the offices of Davis Gelatine.

W. Australia Closer To Rich Asia Market

(CONTINUED FROM P. 76)

cation for B.P.'s being here is that the port of Fremantle (which is almost a suburb of Perth) is the biggest bunkering port in the southern hemisphere.

The ocean ships from Europe, Africa and Asia make this their first and last call, between their journeys round the coast to the bigger states—Adelaide, Melbourne, Sydney and sometimes Brisbane. They bunker here and there is B.P.'s outlet for its heavy ends.

Secondly, the tankers which bring the crude oil from the Persian Gulf can generally go on round the coast with the gasoline for eastern Australian markets. They are either B.P.-owned or chartered at the most favorable world rate and the Australian government gives them a license for the "coasting trade" from here to the eastern ports, because no Australian tankers (as a rule) are available.

Products are also shipped from here to Africa and to Aden, which is the biggest bunkering port in the world and doesn't always have a balanced supply from its own refineries.

Establishment of the Kwinana refinery was one of the attractions held out to the one Australian steel-maker, **Broken Hill Pty. Co.** and its subsidiaries, when it was induced to establish a merchant rolling-mill next door. The mill still produces more than Western Australia can use, but Colin Syme, the chairman, told the shareholders this year that increasing demand in the rest of Australia had raised the mill to 15 shifts per week.

But the most relevant lesson of the Kwinana refinery lies in the slogan which Mr. Court is developing, as newly appointed Minister of Industrial Development: Western Australia is 2,000 mi. nearer to the coming markets of Asia.

The emphasis on eastern Asia as the major future outlet for Australia's manufactured goods is heard everywhere. This is the particular emphasis which Western Australia is adding.

Discussing the plans of his new department, Court emphasized that the government is looking for discriminating industrialists with a long view of things.

He doesn't expect to show quick results. He is not interested in the sort of approach made by trade missions. He plans to make specific approaches to special groups of investors. He is looking particularly for businessmen who really know the Asian markets.

The future for manufactured exports to Asia, he believes, belongs to people who will study the markets, develop a real understanding of them, and then make the products they want — not try to sell the products the seller happens to have.

With such expert advice, as soon as he can recruit it, and with the advantage of the 2,000 mi. shorter journey, he believes there will be far-sighted investors ready to back this sort of enterprise in Western Australia.

• **Water supply:** Main source of water for the populated parts of the state is in the relatively low coastal hills (max. 4,000-5,000 ft.). Perth is provided from a dam built in the hills in 1940, and now proving inadequate. Another reservoir and dam, almost tripling the total capacity, is under construction.

The inland area also has to be supplied by a major system of pipelines. It was developed from the 1903 pipeline, 325 mi. long, built to supply the Kalgoorlie goldfields in their heyday. It is steadily being extended.

• **Power:** A state electricity commission runs four generating plants, two near Perth and two in the southwestern part of the state. They all depend on sub-bituminous coal mined at Collie, 130 mi. southeast of Perth. The supply is estimated to be adequate for about 80 years.

Water from the local supply or from artesian wells has to be purified by the ion exchange method.

Total installed capacity at mid-1959: From steam plants, 268,000 kw.; from diesel plants, 21,000 kw.; from hydro, 20,000 kw. (One small plant at a dam outlet near Collie.)

Aside from the agricultural and pastoral prospects, the steady postwar growth of manufacturing has also been paralleled in mining, in forestry and in fishing.

• **Mining:** Gold has been by far the most important mineral product ever since the Kalgoorlie strike in the 1890s. Excluding the subsidy from the Commonwealth government, output was valued at £14 million in 1957 and £13.5 million in 1958.

But the increasing value, and the hopes for the future, depend on exploiting more of the industrial minerals. Iron ore, manganese and blue asbestos have been the three biggest so far, each coming close to £1,000,000 in value last year.

Most of the iron ore (more than half a million tons with an average assay of 64% iron) was shipped round the coast to the Broken Hill company's steel mills in New South Wales, where it supplemented the main supply from Iron Knob in South Australia.

But some was also used to produce pig iron locally, from which the new steel rolling mill at Kwinana (near Perth) produced merchant bars and fence posts.

The West Australian government has been seeking to make an export deal on some other deposits of iron ore. After a stream of enquiries from Japanese agents, it announced that it would accept tenders for either five million or ten million tons of ore for export. The terms were to be pretty stiff—a substantial deposit, and a royalty which would be far larger than the 1/6d. (say, 15c) per ton which the state government charges the Broken Hill company.

The plan was not to put this royalty into the general revenues, but to use it for capital development.

However, the federal government has iron ore under export permit. It is acutely aware of the advantage which the Australian steel industry has gained from its supply of unusually rich ore, and it realizes (as does the Broken Hill company) that these rich ores won't last forever.

So it forbids export of "a natural resource which will be needed by Australian industry" and it refused to waive this rule even for the Western Australian government.

Most of the blue asbestos (crocidolite) and more than a third of the manganese are exported.

Considerable hopes are also pinned on some of the rare minerals which are now being produced. They include tanto-columbite, glauconite, beryl, bismuth, bentonite and ilmenite (which is found in remarkably pure form in the beach sands).

• **Forestry:** In the high rainfall areas in the south of Western Australia production of sawn timber amounts to something over 18 million cu. ft. annually. Most of it is jarrah, with karri as the next largest crop.

Both of these are eucalypts and hard woods. They are exported for use as railway ties, and they are shipped to eastern Australia for use in building or as flooring.

The karri, somewhat red in color, is a magnificent tree which rivals the original-growth Douglas firs in B. C.

Annual value of forestry production in the state has risen steadily from £1.8 million in 1948 to £5.1 million in 1958.

• **Fisheries:** Western Australia produces nearly 80% of the frozen crayfish tails which are a valuable dollar-earner in the U. S. market. In the 12 months ended June 30, 1959, exports to U. S. reached a record of over seven million pounds, out of a catch of nearly 25 million pounds.

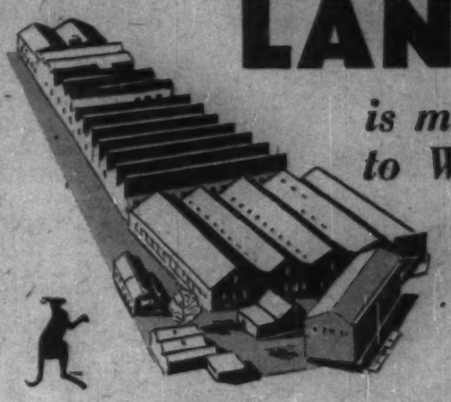
This leaves Australia in second place to Canada as a supplier of the U. S. market, with South Africa supplying about the same amount. (Canadians call them lobster tails.)

The Australian experts believe they could sustain a considerably higher yield, and would like to extend their markets. They are now investigating a new ground off the south coast of Western Australia.

Frozen prawns are regarded as another promising export to U. S., and possible grounds are being explored off Western Australia as well as on the east coast.

LANE BUILDERS' HARDWARE

is made in Australia to World Standards!



Henry Lane's factory at Newcastle, headquarters of Australia's steel industry, is one of the largest in the southern hemisphere specialising in Builders' Hardware.

Products of the Lane factory are to be found in homes throughout Australia and New Zealand; also in North America, India, South Africa and South East Asia.

The plant is equipped with every modern aid to efficient production, including machinery for press work, die casting, brass founding, electroplating and enamelling.

Lane Builders' Hardware available for export at competitive prices includes a complete range of Shelf Hardware (Tower and Barrel Bolts, Sash Fasteners, Hooks and Door Bells), Gate Latches, Mortice and Tubular Latches. Passage and Bathroom Sets.

Catalogues and Price Lists are available on application.

CARCASS of cattle which died in a drought in Northern Territory. Recurrent drought forces cattlemen to keep herds below the numbers that could be raised in good seasons.

Drought

Fact of Farmer's Life

By GEORGE FARWELL

Like the plagues of Egypt, periodic drought is an accepted part of Australian life.

Despite what seem to foreign eyes to be catastrophic losses in terms of sheep, cattle and national revenue, Australians tend to take these recurrent droughts almost as much for granted as the fact that leap year comes round once in every four.

Perhaps this helps to explain the stoical attitude of the pastoralist and farmer. He has an instinct for gambling both as pastime and investment, and with it goes the psychological ability to stock up again after drought has decimated his flocks and herds. Laconically, he speaks, not of drought, but of "a dry spell."

Perhaps this also explains the volatile nature of the nation's social life. The Australian character tends to swing from one extreme to another, just as the seasons do: floods one year, drought the next; duststorms at one end of the country, a cyclone at the other.

Torrential rains deluge the tropic North during the annual monsoon; they are followed by an eight-month dry season which makes both stock-raising and tropical agriculture hazardous in much of the huge Inland.

Some men will even dispute whether drought should be regarded as a normal part of the Australian scene at all. They consider it bad taste even to mention it overseas. Others claim that these occasional scourges are never as bad as they used to be.

Yet the past four years have brought serious droughts in several regions, while the continent as a whole has had an exceptionally long run of good seasons.

Rural prosperity has never been so high as it is now. We have had a 10-year cycle of plentiful rainfall and lush pastures, and it coincided with soaring world prices for wool and unprecedented market for beef and lamb.

Then, in 1959, the Northern Territory — more than 500,000 sq. mi. in area—was severely hit by droughts in two separate regions. The losses came to at least 250,000 head of beef cattle, and it was mainly young breeding stock.

Eventually good rains brought relief to the Territory. The threat of drought in other states, notably Queensland and New South Wales, passed off. Only South Australia remained in danger.

By mid-November the position in South Australia was growing acute.

The best measure is in the rainfall figures. In the southern areas around Adelaide, the normal annual rainfall averages 21 in. This is enough to grow wheat, barley, merino wool and fat lambs.

In the first 10½ months of 1959 less than 9 in. had fallen. The usual autumn rains could be expected in April. But any worthwhile falls before then were unlikely.

The Australian Wheat Board forecast that South Australia would produce only six million bushels this year. That is one-fifth of last year's crop, which came to nearly 30 million bu. Growers' income would drop by £14 million (more than $30 million).

Instead of exporting 17 million bu. to New Zealand, the U. K., Iraq, Rhodesia and other Australian states, South Australia was faced with the prospect of importing wheat from neighboring Victoria.

A drop of 26 million bu. was also expected in the state's normal 35 million bu. of barley.

The sheep farmers were suffering as badly. By mid-November, they had sold one million — out of 15 million-head at poor prices, principally to the abattoirs.

Hand-feeding was standard practice, even though baled hay is scarce and costly. Mortality was rising. Many owners were cutting the throats of their sheep rather than see them slowly perish.

For a while lamb was glutting the Adelaide market. A visitor from another state capital with higher living costs remarked on its cheapness. The reply came, sardonically from a glazier. He said:

"You reckon a whole lamb carcass is cheap at 10/6? I wouldn't call it lamb at all. But stick a candle inside and it makes a first-rate Chinese lantern."

In some areas an occasional spring rain of an inch or so made all the difference. In place of ruined cereals and bare paddocks, it provided full dams and ground tanks where sheep could water.

Then came the summer temperatures. They climbed toward 90 deg. and 100 deg. and the position again became acute.

The critical period will be between January and May, according to the Government's Chief Agricultural Advisor, A. J. K. Walker.

Large stocks of dry feed were used up, he said, and there was little prospect of harvesting more. If the "dry" did not break until June, new pastures could bring no relief before August. By that time, stock losses might rise to 25% of the total flocks.

If rain does not come till then, there is another danger —erosion. Increasingly arid pasture lands are liable to attack by hot winds and dust storms.

No doubt the rains will eventually come, as they always have. But before they do, the damage to the national economy may be severe.

This pattern has been repeated many times since European settlers first took their flocks and herds into the Australian "outback."

The "outback" is the Australian name for the hinterland. Its natural enemy is heat, not cold. But in other respects it presents the same problems as Canada's North.

Drought years are distinguished in the Australian mind in the sort of way a Frenchman remembers his vintages or an Englishman his Derby winners.

Thus, through the bumper years of the 1880's, settlement ebbed and flowed. Much of the "Centre" was successfully stocked in these years. Then came the "grandfather of all droughts" from 1901 to 1903. Many large cattle runs closed down altogether.

Succeeding drought years came in 1914, 1927-29, 1935, 1944. Then the great debacle occurred at the "top end" of the Northern Territory in 1951, when 500,000 cattle perished.

Use More Domestic Tobacco

Tobacco is grown in Australia, and the government requires that all manufacturers of cigarettes shall use 22% by weight of Australian leaf.

At the end of June next year the required proportion will rise to 28.5%.

Licenses to import tobacco are issued to manufacturers on a "Replacement" basis, after required proportion of Australian leaf is taken into account.

A warning about this government regulation — which is parallel to controls assuring the full use of other high-cost Australian products — was issued recently in the Directors' Report of **Rothmans of Pall Mall (Australia) Ltd.,** which since March, 1956, has captured more than 25% of the total market for cigarettes.

King size cigarettes now account for more than 30 out of every 100 sold.

The firm's rapid expansion has led to purchase of a second factory, and a new share issue (on the basis of one for two) has been announced for early in the New Year.

"Australian tobacco," said the Rothmans directors, "is the highest-priced leaf in the world."

Part of the reason for this, they said, was that the cigarette manufacturers compete vigorously at the auctions to get the best leaf.

But, they add, "it has been suggested that the present high prices may encourage marginal and inefficient producers—to the detriment of the growing industry as a whole."

The directors pointed out the danger that an increase in the price of cigarettes might lead to a decline in consumption, with lower revenues for the government and less demand for Australian leaf.

"It is a problem," they said, "which calls for long-range thinking."

The increase in the amount of Australian tobacco which must be used in Australian cigarettes, announced for next June, may not be the last.

Almost simultaneously with the Rothmans' report came a speech by Premier Nicklin of Queensland envisaging the addition of 12,000 acres to the tobacco-growing areas.

This is more than a quarter of the land to be irrigated by the new Timaroo Falls Dam in Northern Queensland. 1,000 acres was expected to be added this year.

Atomic Future Far Off

PROF. J. P. BAXTER
Chairman, Australian Atomic Energy Commission

Australia's atomic energy program is planned largely with an eye to the future. That is inevitable because there is no immediate need for nuclear power to replace expensive conventional stations.

In this respect Australia is like Canada. Present emphasis is on raw materials, isotope manufacture and application, and training of scientists and engineers. Power reactor research thus rests on a firm base of associated techniques.

Co-ordination of the country's atomic energy program is carried out by the Australian Atomic Energy Commission, a statutory authority established by the Commonwealth government in 1953.

The commission was given responsibility for such activities as the discovery and production of uranium, the development of atomic energy for industrial and other purposes, and the training of nuclear scientists and technologists.

Its first major project was the production of uranium oxide in the far north, at Rum Jungle, to supply this strategic material for the Western alliance. The commission has maintained its interest in raw materials, encouraging private industry to play a major part in the development of new deposits.

This lead has fostered a healthy uranium mining industry.

In 1958 the research establishment at Lucas Heights, about 20 mi. from Sydney, was officially opened. This is the headquarters for Australian atomic research, and the site of the country's first reactor, HIFAR.

HIFAR is based on the U. K. DIDO design. It is a materials - testing reactor, cooled and moderated with heavy water, using a graphite reflector and enriched uranium fuel. It has a heat output of 10MW and a maximum neutron flux of 10^{14} neutrons per sq. cm. per second.

The reactor is the principle research tool for an establishment with a present staff of more than 500.

The commission has estimated, on the basis of present costs, that nuclear plant might be installed in some areas with high conventional fuel costs by 1970. But in other areas there is sufficient low-cost coal to meet demands for power until the end of the century.

These considerations give Australia a strong interest in reducing the present comparatively high cost of nuclear power. Its own research program is based on a high temperature gas-cooled thermal breeder system using enriched uranium and fertile thorium, with beryllium or beryllia as moderators and possible sheathing materials.

This system is considered to hold promise of being suitable for Australian conditions, but there is also interest in the work that Canada is doing on heavy water reactor types for the same reasons.

On present indications natural uranium systems will not be economically competitive in these areas, and therefore an enriched system is favored for research and development.

Some natural uranium reactors will probably be installed meanwhile in areas of Australia with high conventional fuel costs, but it would be unwise for Australia to duplicate development work already done or at an advanced stage in other countries.

Similarly, in choosing a thermal breeder system for study in preference to fast breeder systems, Australia has avoided repetition of work elsewhere.

Another important side of the commission activities will be production of radioactive isotopes. HIFAR, when brought to full power late this year, will have sufficient capacity to meet Australian demands for isotopes, and will be able to supply some for export to neighboring countries.

As a small nation with limited resources, Australia attaches great importance to international co-operation, and wherever possible aims to avoid unnecessary duplication of work already done overseas.

Australian scientists have also taken part in agency activities and in other international work, including the U. N. Committee on the Effects of Radiation.

Recognizing that any atomic energy program needs an assured supply of skilled scientists and engineers, the commission has taken the lead in the establishment of the Australian Institute of Nuclear Science and Engineering.

With its headquarters at Lucas Heights, this institute will be a joint venture between the commission and Australian universities. It will co-ordinate use of the facilities at Lucas Heights by the universities, and encourage nuclear research in the universities themselves.

FOR TRADE AND INVESTMENT OPPORTUNITIES
IN
AUSTRALIA & NEW ZEALAND
FIJI, PAPUA and NEW GUINEA

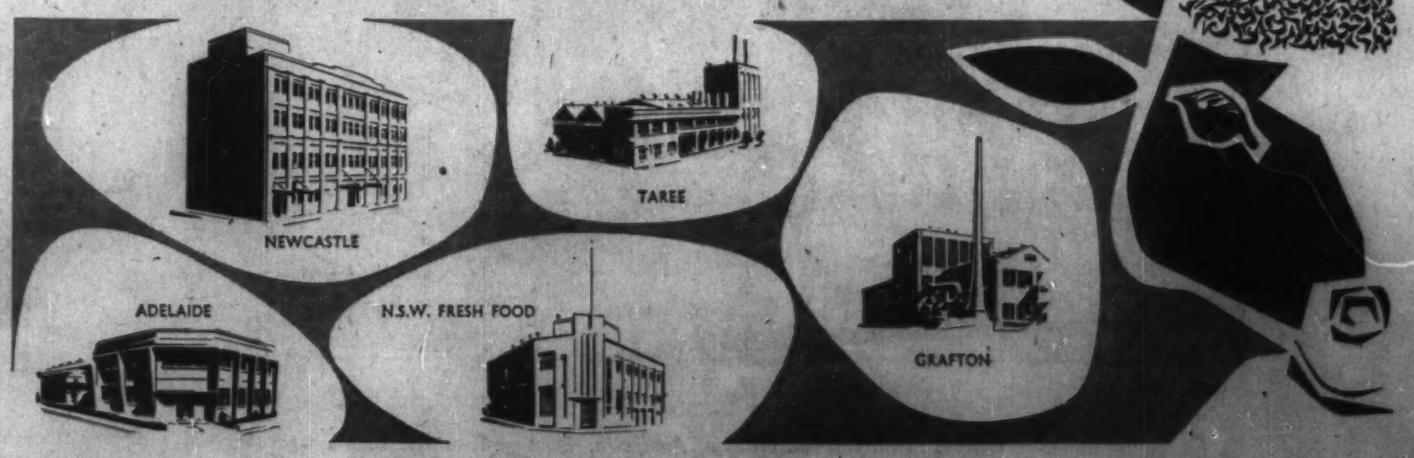
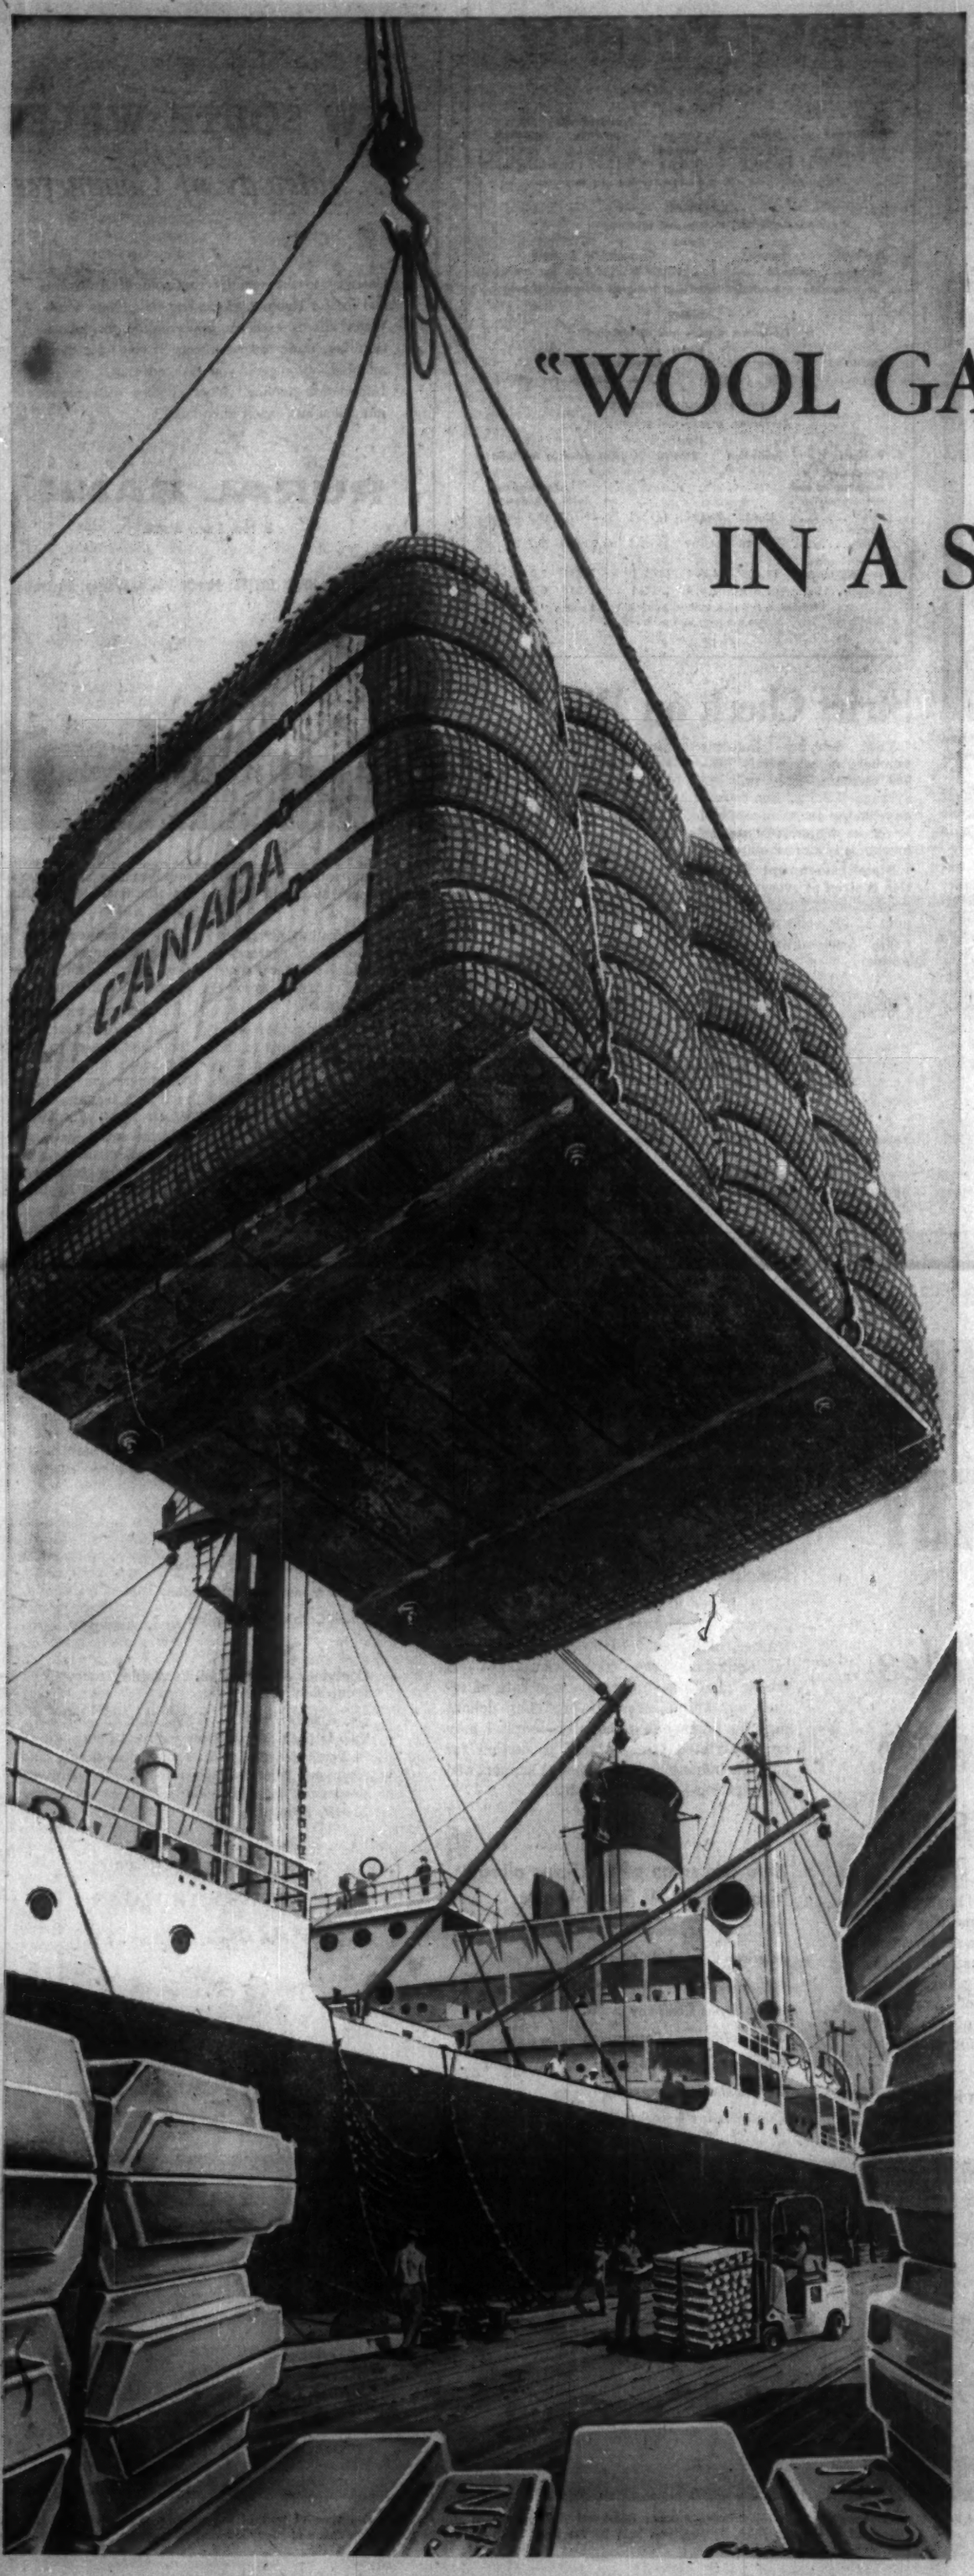
FACTORIES LIKE THESE ASSURE THE FUTURE OF AUSTRALIA'S DAIRYING INDUSTRY

Peters Consolidated Milk Industries Limited, through foresight and planning have greatly contributed to the progress of the Australian Dairying Industry. Their chain of modern factories and creameries assure the dairyfarmer of a profitable market for all the milk he can produce . . . thus creating the incentive for greater production to meet the demand from both here and throughout the world for more milk and milk products. Peters is Australia's largest ice cream manufacturer, and is one of the largest distributors of bottled milk in the Sydney Metropolitan area.

Peters
CONSOLIDATED MILK INDUSTRIES LIMITED
A LEADER OF AUSTRALIA'S DAIRY INDUSTRY

We are proud of this All-Australian organisation, whose efforts make an important contribution to Australia's prosperity





"WOOL GATHERING"–
IN A SURGING ECONOMY

Few countries have matched Australia's rate of economic development in the last ten years. A dogged persistence, backed by scientific development programs, has resulted in the birth of many thriving new industries . . . revitalized development of natural resources . . . a concerted effort to gain world markets.

It is this spirit and rate of progress that has caught the investment eye of the world. Today, Australia is the world's largest wool exporter (Canada imports almost all its wool from Australia); she exports millions of tons of sugar, meat and many other primary products around the world.

Against this background of strong primary industry, the continuing development of Australian manufacturing potential calls for more and more electric power. Aluminium production has a particularly voracious appetite for electric power. In Canada, where hydro-electric power is so abundant, Aluminium Limited of Canada produces ingot for Australia, thereby helping to conserve Australian power resources.

In so doing, Aluminium Limited of Canada is proud to be contributing to the development of the Australian economy by providing aluminium from Canada.

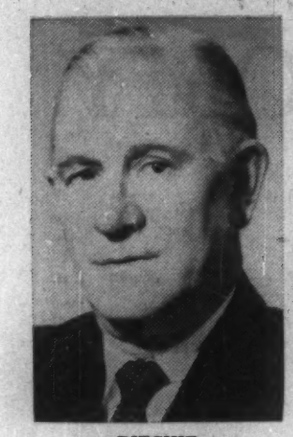
Farm Machines

Nearly All Australian Made

By L. T. RITCHIE
Chairman and Managing Director, Massey-Ferguson (Australia) Ltd.

Australia has had a pressing demand since the early colonial days for the most efficient possible farm mechanization. The country's prosperity depends on high volume farm production, and the lowest possible cost is even more fundamental here than elsewhere.

As a result the agricultural machinery industry is intensely competitive, and primary producers have



RITCHIE

benefited from a succession of new labor-saving, cost-reducing machines.

Today the Australian industry supplies almost all of the nation's needs, apart from tractors. Most of the tractor components are still imported.

The percentage of other components made in Australia has gradually increased, until now only a token quantity of components or machines are imported. This conforms with **Massey-Ferguson** policy which is to give all its world-wide markets

BIGGEST FARMER in Australia, Eric Smart of Mingenew, Western Australia, watches three of four 15 ft. self-propelled combines he recently purchased. He farms 87,000 acres.

machines and implements which, as far as possible, are manufactured locally and "tailored to measure" to the needs of each country.

The policy of restricting imports and exporting Australian-manufactured machinery wherever possible contributes substantially to the Australian balance of payments.

Canada has by far the longest association of any country with Australia's farm machinery. Massey and Harris machines were being sold here long before the merger of 1891 which launched the famous Massey-Harris company. But today **Massey-Ferguson (Australia) Ltd.** heads a list of 300 manufacturers throughout Australia.

The industry has developed very rapidly since World War II. The value of its output in 1947-48 was about £8 million. In the year ended June 30, 1959, this had increased of £29 million.

Today about 12,000 people are employed in the 300-odd establishments in all the mainland states. But the industry is concentrated in Victoria, which accounts for about half the output and half the work force.

The three major manufacturers in Australia are Massey-Ferguson, **International Harvester** and **Ford.**

Massey-Ferguson's connection goes back to 1930, when Massey-Harris Co. gave exclusive distribution rights in Australia to **H. V. McKay Pty. Ltd.**, at Sunshine, near Melbourne, and at the same time took a shareholding in the Australian company.

When this agreement expired in 1955, all the ordinary shares held by the McKay interests were sold to Massey-Harris, which thus acquired a flourishing subsidiary.

The present plant at Sunshine embraces 80 acres, about half of which is roofed. It is the second largest manufacturing plant in the world-wide Massey-Ferguson chain.

The International Harvester Co. of Australia was established as long ago as 1912, but its first move to manufacture in Australia was taken in 1939 with a factory at Geelong, Victoria.

Strict Check on Milk

The dairying industry numbers approximately 100,000 farmers. They milk an average of 3.5 million cows a day—more in summer and fewer in winter. Milking by machines is almost universal.

State government inspection is strict at every stage of production to ensure observance of the rules of hygiene.

The Commonwealth government controls export quality. All butter and cheese exported comes under the provisions of the "Exports (Dairy Produce) Regulations" and is subject to supervision, inspection and examination by expert officers.

A butter and cheese price equalization scheme has operated for many years by voluntary action, based on agreements between the manufacturers and the Commonwealth Dairy Produce Equalisation Committee Ltd.

This Committee, which represents all sections of the industry, enters into agreements with manufacturers to secure for them equal rates from sales of butter and cheese. For this purpose it fixes basic prices for these products, in Australia or abroad.

The effect is that the local and export trade is distributed in equitable proportions among the manufacturers by means of quotas.

The committee equalizes returns to factories through an equalization fund.

Thus each manufacturer enjoys his due share of the more profitable of the two markets (local and export) and bears his due proportion of the less profitable market.

An equalization plan also operates for the casein markets.

The Australian Dairy Produce Board is a representative producers' organization constituted under a special Act of Parliament.

The board can get government-guaranteed loans to finance exports. It is the sole exporter of butter and cheese to the U. K. and to other markets where importation is subject to government license.

Sales to all other markets are handled on a trader-to-trader basis, subject to minimum basic f.o.b. prices fixed by the board from time to time.

The Commonwealth government started a stabilization plan in 1952 with the approval of the states.

It fixed factory prices of butter and cheese, keeping them low enough to be within the reach of all Australian consumers. But it guaranteed return to farmers on all domestic sales, plus 20% over.

If the actual price fell below the guarantee, it was made up by subsidy on all output covered by the guarantee.

NEW SOUTH WALES

. . . gateway of Commerce

Gateway to the wealthy continent of Australia, and itself a vigorous, expanding state, New South Wales affords excellent opportunities for manufacturing, trade or investment. If you have these in mind, we suggest you take advantage of our Information Service. Your enquiry will receive individual and expert attention.

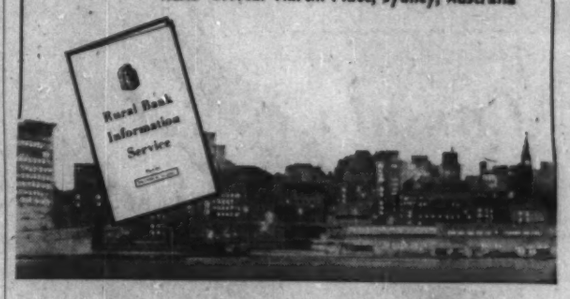
HEAD OFFICE: Martin Place, Sydney, Australia



AUSTRALIA WELCOMES INDUSTRY

New South Wales offers a great new area for profitable business expansion

When you consider the many significant advantages of expanding your business to Australia's "key state", you'll see why over 400 leading U.S. companies have invested more than $750 million in Australia since 1950. You'll see why the highly favourable business and fiscal climates of Australia make New South Wales one of the most attractive places in the world for profitable expansion.

For instance, New South Wales has 96% of Australia's steel production . . . 77% of its coal production . . . and 43% of Australia's factory production. It is located on the sunny south-east coast of the continent and lies in latitudes similar to those of California. It is 50,000 square miles, larger than the entire Province of Alberta and boasts as its capital the thriving metropolis of Sydney—over 2 million population.

Consider These Advantages

400% increase in factory production since the war. Population on the increase—well-trained, highly skilled labour force—no capital gains tax—lower corporation taxes—no double taxation—higher average rate of return on capital invested—profits in dollars may be taken out of country—capital may be repatriated freely—tariff protection for efficient industries—government support and co-operation—political stability.

Here are some of the firms already located in New South Wales

Allis-Chalmers Manufacturing Company
American Cyanamid Company
Borg-Warner International Corporation
Bristol-Myers Company
Coca-Cola Export Corporation
Colgate-Palmolive Company

Category B: Small quotas for "less essential" consumer goods. Discriminatory, when followed (D) or (TD):	85	28
Sub-total: quotas	185	107
TOTAL, ALL IMPORTS:	850	765

Import Controls

Limit Canadian Sales

The Australian system of import controls undeniably presents obstacles to Canadian exporters. But since August Canada as a dollar country receives equal treatment with everybody else on about 90% of the goods imported into Australia.

This is a great improvement. Previously only 66% of total imports received nondiscriminatory treatment.

Most serious items of continuing dollar discrimination are lumber and motor cars. But discrimination also continues on other goods Canada might be able to supply.

Here are the other chief items: Cigarettes and cigars; textiles of various kinds; sheets and pillowcases; carpets and linoleum; clothing; lawnmowers; washing machines and refrigerators; vacuum cleaners; heating and cooking appliances; radio and TV sets; guns and rifles; handbags, wallets and fancy goods; furniture; sporting goods and toys; footwear.

These goods are not banned even from dollar sources.

Most of them are in the lowest quota category wherever they come from.

If an importer gets a license to bring in a certain quantity of one of these items, he can usually make at least some of his purchases in Canada or the U. S.

But the discrimination lies in the fact that there is an even tighter limit on imports from here than there is on imports of these things from a nondollar source.

Besides extending nondiscrimination to 90% of imports, the government also enlarged its annual import program by £A50 million ($110 million).

Last year it restricted imports to £A800 million ($1,760 million). This year it is ready to let them rise to £A350 million ($1,870 million).

Out of this limit of £A850 million, dollar countries will have a chance to compete for as much as £765 million worth of business.

The general method of holding imports to the desired figure is this:

● **The government admits basic raw materials freely** — especially the materials of industry, even if they are highly manufactured components.

● **Manufacturers can usually get everything they need** to bolster their production in Australia.

● **But, in order to keep down the total Australian bills,** imports are divided into lists of commodities, partly according to end-use.

● **Most goods for retail, or consumer goods,** may be excluded if the government decides that a product of Australian origin will do as well —or nearly as well.

But the government can relax this rule whenever it finds that the goods are not "readily available from local sources" and "on commercially acceptable terms."

Imports are divided into six categories.

The first two present no problem: one covers exempt goods, and then there is a very small category Z, which in effect is licensed quite freely.

▸ **Quotas: category A:** These cover "relatively essential goods," which are mostly raw products and industrial materials. There is no flat quota: it varies from item to item.

Until last August, "A" quotas could not be used for dollar goods. Now most of them can. But there are some exceptions, of which the most important are footwear and some textiles.

▸ **Quota: Category B:** This is the tightest category, and it covers mainly consumer goods classified as "less essential."

The quotas hold imports from all sources down to less than 3% of the total Australian market for the goods included.

Imports from dollar sources are held to less than one third of the total "B" quotas—well below 1% of the Australian market.

▸ **Replacement Quota: Category R:** In effect an importer can get all the goods he can move. All kinds of goods on the "R" list are admitted without discrimination from anywhere.

▸ **Administrative Category.** This is by far the biggest category, and much the most important to Canada. There are no rules. Most of the goods are items of capital equipment or raw materials or components.

Only two items in the "Admin" or "Adm" class are subject to discrimination because they come from a dollar source. They are the big items, automobiles and lumber. Otherwise all "Adm" licenses can be used in any supplying country the importer chooses.

Many, if not most, of the items interesting to Canada come into the Adm category, where there are no rules to guide an exporter. He needs to know how the government does in fact treat goods of the kind he wants to sell.

Canada, U.K. Big Sugar Customers

By DR. J. VERNON
General Manager, Colonial Sugar Refining Co.

VERNON

Canada is one of Australia's most important customers for raw sugar, ranking second after the U. K.

As both Australia and Canada are members of the British Commonwealth, it was a natural development, with Canada wishing to import sugar and Australia wishing to export it, that the two countries should trade with one another in this commodity.

In 1958 Canada required about 800,000 tons of sugar. It produced 165,000 tons of this on its own sugar-beet farms. The rest was imported in bulk—about 122,000 tons from Australia and most of the remainder from the British West Indies.

Canada is an importing member of the International Sugar Agreement, which includes both importers and exporters.

Some objectives of the agreement are to:

- **assure supplies** of sugar to importing countries at equitable and stable prices
- **assure markets** to exporting countries at equitable and stable prices
- **facilitate increases** in the consumption of sugar and to contribute to the improvement of the living conditions of consumers throughout the world
- **help maintain** fair standards of labor, conditions and wages in sugar producing countries
- **foster international** co-operation in connection with world sugar problems.

International trade agreements to succeed in the long term must confer benefits on both parties to them—on the buyer as well as the seller. The International Sugar Agreement has done that.

With a production of 1,370,000 tons of raw sugar in 1958 Australia ranks as the fourth largest producer of cane sugar in the world — after Cuba, India and Brazil.

About half Australia's production is refined and consumed in Australia and about half exported, mainly to the U. K., Canada, Japan and New Zealand.

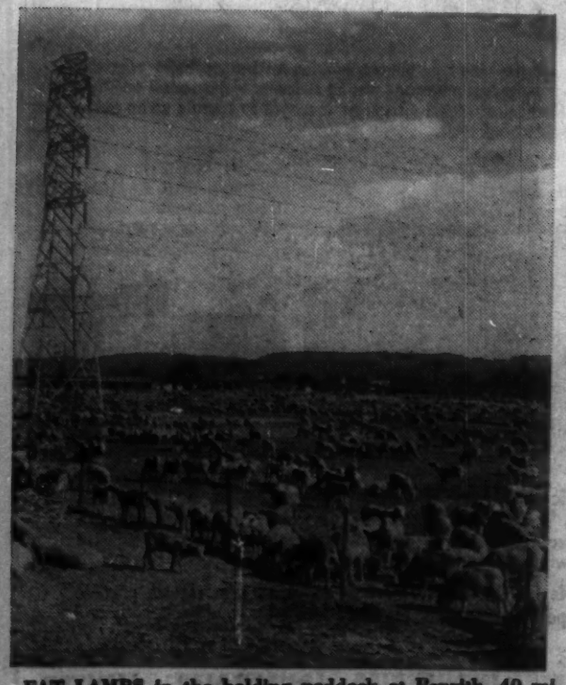
The Australian raw sugar industry is concentrated in North Queensland, and 80% of the raw sugar is produced north of the Tropic of Capricorn.

The raw sugar producing districts are scattered along 1,200 mi. of the northeast coast of the continent from Grafton in N.S.W. to north of Cairns in Queensland.

In each district several hundred farmers grow sugar cane on their farms and sell it to a nearby raw sugar mill. There are about 9,000 cane farmers in Australia and they produce each year about 10 million tons of sugar cane.

Fourteen of the 34 raw sugar mills in the cane-growing areas are owned co-operatively by the farmers who supply them with cane. The remaining 20 are owned by private companies.

Bulk handling installations, which have been installed in recent years at ports along the Queensland coast, include some of the biggest of their type in the world. The installation at Mackay, for example, will store 150,000 tons of sugar. Ships that took three weeks to load by hand labor are now loaded mechanically in two days.



FAT LAMBS in the holding paddock at Penrith, 40 mi. west of Sydney, Australia recently made a shipment of 30,000 fat lambs to the U. S., first to be exported for American tables.

As a result of the tremendous popularity of Rothmans King Size with Canadians, Rothmans is for the second year in succession, the world's largest selling King Size virginia cigarette. Why is Rothmans King Size so popular? Because Rothmans King Size gives you *extra* length, easy draw, and 100% straight Canadian tobacco—the *best* tobacco money can buy.

You get a *real* filter cigarette with Rothmans—the one cigarette that really *satisfies*.

THE BEST TOBACCO MONEY CAN BUY

We are proud that Canadian tobacco stands among the finest tobaccos in the world.

In 1958, Canada's tobacco-growing industry produced a crop valued at $82,397,813.22. Exports of Canadian tobacco brought $13,193,220.31 into the Canadian economy.

Rothmans is proud of its association with this growing Canadian industry—and proud to play a part in its continuing success.

Rothmans King Size Filter is the only international brand available on major airlines of five continents.

The Rothmans "Gold Leaf" solid gold trophy, one of the premier awards in North America, awarded annually for the best tobacco crop in Canada.

Dried Fruits

Australia Ranks Third

By JOHN F. WEARNE, A.A.S.A.
Secretary, Australian Dried Fruits Control Board

The dried fruits industry in Australia had an ill-fated beginning late in the 19th century; but now it has been built to such a level that Australia is the world's third largest producer of dried vine fruits (currants, sultanas and raisins).

To most people, it will be a surprise to learn that today's industry had its genesis in 1886 when two Canadians, George and W. B. Chaffey (the former a civil engineer), established Mildura, Victoria, on the lower Murray River at the invitation of the Victorian government.

The following year they accepted an invitation to found a second scheme at Renmark, South Australia. The history of the pioneer days is to be found in one of Australia's best sellers, Ernestine Hill's "Water Into Gold."

Initial progress was remarkable, and an area which in 1887 supported only 12 people had a population of 3,500 in 1894 and over 8,000 acres under intense cultivation. Hard times followed with many growers leaving the district and George Chaffey returning to California. W. B. Chaffey remained encouraging the growers, leading every movement for the betterment of the district, and working incessantly for the success of the dried fruits industry.

By 1900 the industry was firmly established in the Murray Valley where the bulk of dried vine fruits are still produced.

By 1911 output was adequate for Australian consumption and overseas markets had to be examined.

Thousands of acres of vineyards stretching for mile upon mile on the interior plains of Australia are truly a fitting memorial to the vision and outstanding enterprise of George and W. B. Chaffey. The genial Australian climate is eminently suitable for production of high grade vine fruits.

The first year of harvesting in Mildura and Renmark — 1891 — resulted in the production of five tons of raisins. By the turn of the century the tonnage had risen to 2,000 tons of raisins and 400 tons of currants. **Total production of dried fruits in 1959 was 86,200 tons.**

In 1926 when the Canadian Australian Reciprocity Treaty came into operation, the export of Australian dried fruit to Canada was approximately 200 tons. The industry was one of those which the treaty was designed to assist.

The outstanding feature of 1959 has been the record support of Canadian buyers. It is of great satisfaction that, of the average annual consumption in Canada of approximately 24,000 tons, sales from Australia this year will be in excess of 20,400 tons — 85% of consumption.

This progress toward predominance of Australian dried fruit in Canada, is the direct result of the policy of Commonwealth Preferences, and the Australian dried fruit grower owes a debt to the respective governments which have done so much to consolidate the trade in Australian dried fruits with the British Commonwealth.

The substantial margin of preference accorded Australian dried fruits under the customs tariffs of Canada, the U. K. and New Zealand is of paramount importance.

These preferences are fundamentally one of the bases upon which the Australian dried fruits industry continues to depend for its existence.

Although it is the industry's policy to try to develop new export outlets and so lessen the dependence on traditional export market, any such permanent development will be seriously challenged by foreign producers through low costs of production, heavy export subsidies and currency manipulations.

To develop British Commonwealth markets still further, and in recognition of the maintenance of preferential tariffs, the industry continues to follow the policy of moderation in prices. In recent reviews of export marketing procedures, this policy has been reaffirmed.

Exports earnings from Australian dried vine fruits figure prominently in the over-all picture of Australia's export income from the U. K., Canada and New Zealand.

The income received annually for dried fruit sales to Canada is exceeded only by sugar sales.

Considerable progress has been made in the application of scientific knowledge to the industry with the assistance of the Commonwealth Scientific and Industrial Research Organization in Australia and the Imperial College of Science in England.

The investigations by these two bodies have assisted greatly in developing new and improved techniques in order to pass on to the consumer the best possible product.

Canadians Miss Many Best Wines

By MICHAEL BARKWAY

SEPPELTSFIELD, South Australia (Staff) — This is one of the principal vineyards in the famous Barossa Valley, 60 mi. north of Adelaide, which produces a large proportion of Australia's good wines.

I've just spent the afternoon looking over the vineyards and winery with Ian Seppelt, chairman of the Australian Wine Board.

He is one of several brothers who are now in charge of the business which was founded by their great-grandfather back in 1835.

The family tradition is very much alive in this valley, as in many of the Australian wine firms.

The Barossa valley is predominantly settled by Germans, and the original Seppelt settler came from eastern Germany to escape religious persecution.

He had not meant to be a *vigneron*, but when he reached this part of the country it seemed the obvious thing to do. Soil and climate were suitable, as nearby vineyards showed: prospects seemed good.

And so the family keeps up the tradition, and has prospered.

The winery here is equipped with a highly efficient technical laboratory, where every wine is put through stringent chemical tests. But Mr. Seppelt insists this is just as a guide and a final check.

Nearly all the Australian wines are blended and the tests help there. But no amount of chemical analysis can make up for the pallet of a skilled taster. And taste, says Mr. Seppelt, is always the final criterion.

I've often heard Australians assert that their wines were as good as any in the world, but I was always sceptical.

It took these weeks in Australia to persuade me.

For a dollar or less you can buy clarets, a few burgundies (though they are rarer) and any number of good dry white wines which compare favorably with most of the French or German wines for which the Canadian liquor stores charge you about $2.50.

It's sad that we can't buy many of them in Canada. But Australian exporters have to find volume lines. And the volume seems to be in the "popular sweet sherries", as Mr. Seppelt calls them, and the standardized ordinariness of certain established brands.

Any ambitious Australian vintner who felt called to establish a reputation for good wine in Canada would soon find himself up against the provincial government's control of liquor sales. Nothing can be sold till it is "listed" by the provincial liquor commissions. They ration their listings pretty tightly, and the first thing they want to see is volume.

But it isn't only that. Australia is not producing an abundant surplus of good wine. Several of the widely-advertised names here cover products which are not much better than passable, while rival vineyards offer at the same price something which is first-rate. The home market can absorb all the really good products — besides a lot of the mediocre ones.

Indeed the best wines never reach the public markets. They are produced in small quantities and sold privately.

I asked Keith McWilliams, at his winery in the Riverina area of New South Wales, how people came by these rare quality wines. He replied simply: "The people who really want them know how to get them".

One group in Canberra buys selected wines in big casks and draws them into bottles to distribute among its members.

Some of the hotels and restaurants don't help. Even in good hotels you find some miserable wine-lists. You could do better yourself in a "bottle department" around the corner. And whatever the stock, the so-called wine waiter often knows nothing whatever about it.

One Melbourne hotel, with a good list, has entrusted the job of wine-waiter to an immigrant girl from Latvia, who does it very well. A good hotel at Hobart produced an immigrant English waiter who knew what he was talking about.

Beginners' Guide

When you get a chance to sample Australian wines, this may help you till you find your own way around them. It's one man's choice — no more.

• DRY WHITES: *Many good ones. Until you know them you may be safest with those from the Hunter Valley.*

• CLARETS: *Of those freely available now, you'll find it hard to beat Coonawarra Estates (from the very south of Australia). They are currently selling the 1955 vintage, which was excellent.*

From Mildura, in the Murray valley, try one called Tintara (not dated).

And again don't neglect the Hunter Valley. Cawarra is a good name.

• SHERRY: *If you like it dry, but not too dry, Mildara Supreme is the best easily available. The extra dry is called Mildara George.*

But you'll also find Seppelt's and Penfold's and others quite palatable.

• BURGUNDY: *Not quite so easy. There's a Mildara Tintara, which is quite acceptable, and many more to try. I didn't find anything really tops.*

M. B.

You can buy into Australia through the

SYDNEY STOCK EXCHANGE

The Sydney Stock Exchange has grown in stature and balance with the expansion of Australia's economy.

Today's trading on the Exchange covers over 900 companies, the shares, preference shares and notes and debentures of which have a face value of more than 2,000 million dollars.

To cope with the increase in business on the Exchange — there has been a major in-flow of capital from the United States, United Kingdom and Europe — the Sydney Stock Exchange has introduced a post system of trading for major companies.

Why is the Sydney Stock Exchange Important?

Sydney is the capital of New South Wales, the most highly industrialised State of Australia. Its population of 4 million people manufacture 43 per cent of Australia's secondary products.

The rate of bank advances is higher in New South Wales than any other State and the expansion of established companies or the formation of new companies call for frequent share issues.

The Sydney Stock Exchange is a focal point of this activity and that is why the Exchange is important to Canadian investors.

Do you want information on Australian securities?

The member firms of the Sydney Stock Exchange are happy to provide complete information on Australian business and company securities listed on the Exchange.

A list of member firms of the Exchange is given below. Simply address one of them care of the Sydney Stock Exchange, 113 Pitt Street, Sydney, N.S.W., Australia, and give details of the information you seek.

What can you buy on the Sydney Stock Exchange?

The list of the Sydney Stock Exchange presents a balanced picture of business activity and development — from coal to steel to metal manufacture; from wholesale distributing houses to retail stores; banks, insurance houses and finance companies; unit trusts and trustee companies; oil exploration and gold mining ventures are only a few of the activities of listed companies.

For more information on Australian securities write to any of the following member firms of the Sydney Stock Exchange. They'll gladly help you.

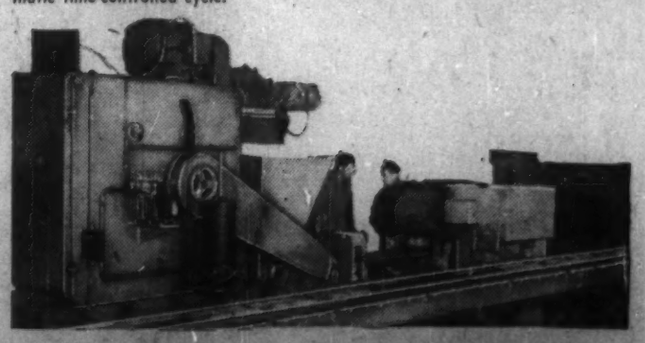
High-speed rotating pan-type mixers working on hypocycloidal principle fitted with independent motorised mixing elements and chemical additive injectors. Mechanical rotary discharger arranged to operate on an automatic time-controlled cycle.

The Monier '100' Tile

This Monier interlocking tile is ideally suited to all types of climatic conditions and may be laid on roof pitches as low as 17½ degrees.
Size: 16½" x 13".
100 tiles to a square (with standard lap of 3¾").
Double side lock, 1¾" wide.
Weight: 10 lbs.



Automatic Machines for Mass Production of Roofing Tiles
Automatic single-acting cam-operated machines fitted with tungsten carbide wear-resisting beds. Central-pressure lubricating plant supplied complete with racking machine and conveyors.

Automatic machinery also available for the manufacture of extruded prestressed, precast concrete flooring and concrete pipe reinforcement from 4" to 72".

RICH GRAZING district in the southern highlands of New South Wales presents many scenes like this mob of sheep on the Tumut Road near Talbingo.

Drought and Kangaroos Plague the Woolgrower

By W. WEATHERLY, Chairman, Australian Woolgrowers' Council

Soon after the establishment of the first settlement in New South Wales, the problem arose of producing something from the land to send to the U. K. to pay for what the colony had to import.

The solution to the problem was the merino sheep and the development of the fine-wool industry.

Upon them the growth and development of the Australian economy has been dependent to the present day.

The first few merino sheep, which had been purchased in South Africa, arrived in the colony in 1797. The exact number is not known but is believed to have been less than 30. Some of the shipment was purchased by John Macarthur, a leading settler who was one of the first to realize Australia's great potential for a sheep and wool industry.

His foresight and experimentation formed a sound nucleus, around which Australia's sheep population has steadily grown. The estimated numbers this year are 152.6 million of which between 70% and 80% are merinos.

New South Wales, Victoria and Queensland produce approximately 39%, 20% and 14% respectively of total Australian production. The remaining 27% is divided between the other three States. The Northern Territory, with only 22,000, is not significant.

The Australian wool grower over the years has been confronted with fire, flood and drought, as well as the depredations of variety of pests.

Droughts have brought stock losses of many millions. Floods have been more localized, but brought serious setbacks.

Rabbits have been drastically reduced by myxomatosis. But now kangaroos are causing concern, particularly in the Pastoral zone.

The sheep blowfly, which must be controlled, is becoming increasingly resistant to the known insecticides. If more effective control measures cannot be found quickly, the sheep growers will suffer losses running into millions of pounds.

Australia has about 110,000 wool growers. Normally they shear their sheep annually. Shearers are engaged by contract, and a woolclasser is hired to class each fleece.

The fleeces are then baled, and sent by road or rail to one of the selling brokers at an auction centre. The centres are in each of the six state capital cities, as well as in five smaller cities in New South Wales, Victoria, Western Australia and Tasmania.

Nearly all the wool clip is sold in this way, though small quantities are consigned to London for auction there. Even smaller quantities are sold privately.

Regular auction sales were being held in Australia by the mid-nineteenth century. By the nineties over 300,000 bales were being handled in Australia. The free auction system thus evolved handled 4.7 m. bales last season.

The aim is to clear each season's clip at current world market prices.

During the last 18 mos., when wool prices at one time fell sharply, suggestions arose for alternative methods of marketing the Australian wool clip. A close study of these suggestions and their implications, as well as of the present auction system was made by the Australian Woolgrowers' Council.

After its study, it came out strongly against any interference with the fundamental principles of the free auction system. Its policy is to use every means in its power to resist a floor price scheme.

Grain Yield Gains

By D. W. MAISSEY, President, Australian Wheat Growers' Federation

The grain-grower of the Canadian prairies works in very different conditions from his Australian counterpart.

To the prairie farmer, wheat, oats and barley are all important.

In Australia sheep and wool are often more important to the grain grower than his cereals.

A typical Australian wheat man would farm rather more than 2,000 acres. He would have 1,000 to 1,500 sheep — mostly of the merino breed — and would seed 500 to 800 acres with wheat, oats and barley.

As in Canada, so in Australia, farm size is increasing as smaller properties are merging with adjoining ones.

The climate of Australia's grain growing areas is very mild. Most Australians have never seen snow. The "frost free" period lasts nearly nine months and, by Canadian standards, the frosts are very mild.

Canadians grow wheat in their brief "frost free" period.

But Australians grow spring-type wheat right through winter. That's how mild the Australian winter is.

Soils are different, too. Prairie soils are mostly deep and rich. In most of Australia's wheat growing areas the soils are shallower and less fertile, though Queensland and northern New South Wales have wheatlands with deep and rich soils more like Western Canada.

Pests are the common lot of growers the world over. Australians are not bothered by the common pests of North America, but they have their own.

Crop spraying, both by boom and by aeroplane, is developing rapidly. Until recently it was confined to weed control. Now it is being commonly used against webworm and other such pests, especially in Western Australia.

Yield per acre, as in Canada, is steadily advancing.

All Australian wheat is harvested by combines which were an Australian invention and development. For 50 years no wheat here has been harvested any other way.

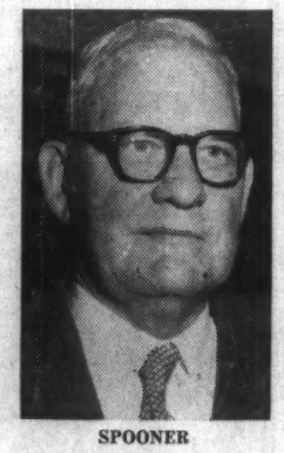
The wheat comes from the combines very dry — with a moisture content of 9% to 12½%. A content of over 13% is not acceptable at the elevators. Schedules make no provision for "tough" or "damp" wheat. There isn't any.

Just as Canadian is the finest Hard Red wheat in the world, so is Australian the finest White wheat in the world. Its extreme dryness is one point in its favor. Its long extraction rate of 73% to 74% is another. Its flour is very white and adds whiteness and "bloom" to the loaf.

By Canadian standards its protein content is quite low. European millers are happy to add about 15% of Australian to their bread grists to help improve color and bloom. The Canadian content gives strength, and the rest of the grist may be home grown or imported from elsewhere — its principal virtue often being cheapness.

'Economy Moving Toward Maturity'

SEN. W. H. SPOONER
Australian Minister for National Development



SPOONER

Australia is still a young nation, but the development pace is on. The economy is being transformed in these post-war years and I believe that it is moving rapidly towards maturity.

Development of Australia, as of any continent — is influenced by the nature of the resources with which the land is endowed, the climate it enjoys and its potential for supporting population at the accustomed standard of living.

This survey by The Financial Post includes articles covering many aspects of Australia's economy and its development. I shall merely summarize the outlook.

Increased rural progress lies ahead of us.

The promise of this lies mainly in agricultural and pastoral research.

In the tropical north, research is already demonstrating that some worthwhile use can possibly be made of lands at present used only for sparse cattle grazing.

If the economic problems can be solved, parts of this region may soon produce fodder crops, pastures, rice and certain other cash crops with residues that would provide valuable supplemental feed for the cattle industry.

We expect to continue our investment in water conservation works and, with these works, to associate sound practices for the conservation of land and forests.

Since World War II, modern techniques of exploration for minerals have resulted in some remarkable discoveries and we have confidence that, in the years to come, further mineral resources will be revealed.

For our fuel and power development we will rely heavily on coal for years to come but we will not neglect the promise of atomic energy and the good hope for indigenous petroleum.

Although Australia is basically a trading nation and our major source of export income is derived from the sale of wool overseas, we have in the past 20 years made rapid progress as an industrial nation.

We see these resource development policies as an essential condition for our national development as a whole.

There are, of course, other conditions just as important in their own way. I would certainly number sound economic and financial policy among them.

We encourage immigration from overseas to enable us to realize the rate of development that our potential justifies. Immigrants have already made a notable contribution to our development.

Our population has increased by nearly one third in 12 years, and we have now passed the 10 million mark, whilst at the same time our standard of living — one of the highest in the world — has continued to improve.

Our industrial development can be expected to proceed, with the assistance of the growing domestic market for its products.

We are confident that our growing industrial economy will rest on a firm and adequate basis of power, water, minerals, and other raw materials, and resources generally.

Canadians Best Customers For Australian Brandies

IAN H. SEPPELT
Chairman, Australian Wine Board

Canada is Australia's second largest overseas customer for wine and its first for brandy. Naturally it looms large in Australian thoughts about export markets.

Australian wines are listed in all the provinces except one, and in eight provinces Australia leads in total sales of wine.

The Australian industry has been gratified by the liberalization of the liquor laws throughout Canada in recent years, and this should enable sales to be enlarged.

The record of last year's sales shows that Australia is holding its own in sales of wine and increased its share of brandy sales, dropping only 2,000 gal. against a total drop of 40,000 gal. from 1957.

Australian wine has a long history. The first vine cuttings were brought to Australia in 1788 in what is called the First Fleet, which carried the first white settlers from England.

They did not flourish. But the pioneer wine-growers persevered. More cuttings were brought out from Europe and by the 1830s vineyards were spreading rapidly.

Today annual production amounts to around 30 million gal. from 160 wineries and distilleries. About 14 million gal. are used as beverage wine and 16 million gal. go to produce fortifying spirit and brandy.

The State of South Australia produces about 80% of Australia's wines and brandy, and another 16% comes from Victoria and New South Wales.

The vineyards are planted with all well-known European varieties. The original cuttings came from Europe, and through the years plantings have been made from cuttings of the older stock.

Australians drink nearly 12 million gal. of their own wines annually and about 750,000 proof gal. of brandy. Exports average between 1.5 million gal. and 1.75 million gal. a year, plus 100,000 gal. of brandy.

Australia's biggest export market is the U. K., where she has been sending more than one million gal. of wine for the past four years.

Then comes Canada with exports of around 300,000 gal.

Other export markets are mainly in the Orient and the Pacific. There is a healthy trade with Malaya, Singapore, Hong Kong, New Guinea, Papua and Nauru. Sizable exports also go to the British West Indies as well as to Fiji.

WE CAN BRIDGE THE GAP BETWEEN TWO CONTINENTS

JUST as *you* have an intimate knowledge of your own country and your own business, so has the Commonwealth Trading Bank of Australia an intimate knowledge of Australia and every aspect of its industrial, agricultural and commercial life.

With over 620 branches spread through all Australian States, the Commonwealth Trading Bank is geared to handle every type of banking transaction. It is also particularly fitted to give straightforward and useful answers to your enquiries.

We would welcome your enquiries. Please write to the Manager, Foreign Division, Commonwealth Trading Bank of Australia, Box 2719, G.P.O., Sydney, Australia.

COMMONWEALTH TRADING BANK OF AUSTRALIA

Coalition Looks Firm

On the surface the Australian political scene is rather dully stable, with everything set fair for the Liberal-Country party coalition headed by Prime Minister R. G. Menzies.

Under the surface, however, there are currents which might produce unexpected change.

The coalition has 77 members (58 Liberals and 19 Conservatives) out of the 122 voting members in the House of Representatives and it has 32 Senators out of the total of 60.

The Labor opposition, with its 45 members in the House (plus one representative each for the Northern Territory and the Capital Territory who may not vote except upon territorial matters), is even weaker than its numbers suggest.

Its forces are divided inside the House and out. It has neither policy nor leaders to command warm allegiance.

Menzies cannot be expected to be unaware that he is a man of first-class ability, surrounded by many second-rate men.

He is one of the best orators in the Commonwealth, with a slightly Churchillian touch, a brilliant and sharp wit (which is not always kind), a bluntness of speech (which the lesser men never like), and a power of repartee which wins him few friends in the House.

His rises magnificently to any sort of scrap. His well-stored mind and cultivated intelligence sometimes seem to set him apart in a way which Australians resent even more than most other peoples. But he'll stand on the platform in the scrappiest kind of hostile meeting, say just what he thinks and take on all comers.

Menzies was prime minister for a short time at the beginning of World War II. He led the disorganized opposition forces throughout the wartime Labor governments of Curtin and Chiffley, and then—to the surprise of many people—he brought a united coalition of Liberal and Country parties to power in 1949.

He has kept power ever since, relying until 1958 on Sir Arthur Fadden as leader of the Country Party and therefore, necessarily, deputy prime minister.

With Sir Arthur's retirement, the more considerable figure in both Country Party and coalition has now taken his place at Menzies' right hand.

John McEwen, a 59-year-old farmer from the State of Victoria, is now leader of the Country Party, deputy prime minister, minister of trade, and the second man to reckon with in the Australian government.

McEwen brings to the government a driving concern with administration which Menzies lacks—not, probably, because he couldn't do it, but because when things are going smoothly it bores him.

McEwen has made the Department of Trade into a lively, very hard-working department whose influence is felt throughout the Australian business world and it works consistently at promotion overseas with a dynamism which has made an impact in many countries.

In all this, McEwen has had an essential aide in Sir John Crawford, the secretary (or deputy minister) of the department.

Throughout the Australian public service as well as among leading Australian businessmen, there is great regret that Sir John has decided to retire next year and accept a professorship at the Australian National University.

Sir John Crawford has been, along with Sir Roland Wilson of the Treasury, and a handful of others, among the most influential advisers of the government.

Outside the civil service proper, but still in the public service, perhaps the only men of similar influence are Dr. H. C. Coombs, Governor of the Commonwealth Bank (soon to be the Reserve Bank of Australia), and Dr. Alan Westerman, the chairman of the Tariff Board (who has been mentioned as one of the possible successors to Sir John Crawford).

The senior ranks of the Australian civil service today seem to have the remarkable quality which the Ottawa service had during the war and after.

As Canberra grows from a showplace into a real capital city, the quality of the civil service, and its standing in the eyes of the public, will make all the difference to Australia.

The government buildings in this still-embryo capital stand at a respectful distance from each other and from the Parliament House, which is still regarded as a temporary home to be abandoned later on for a better one.

Inside the building, which is spacious and dignified, the chambers occupied by the Senate and House of Representatives express—consciously or unconsciously—the sense of compromising between the British parliamentary system and the U. S. system of divided powers which was present in the framing of the Australian Constitution.

Fortunately, the British parliamentary system has come out well on top and it now seems little more than an interesting historical reminder. But both the name and the shape of the "Commons Chamber", as we should call it, provide that.

The outer walls are about square. But the "floor of the House", where the members sit, is in the shape of a horseshoe.

To right and left of the Speaker the benches face each other, as they do in Ottawa. They even suggest memories of Westminster, in that the front benches are without desks.

But about half way down the Chamber the configuration changes, and the members' seats take the form of a semi-circle—as though they half-wished they were in Paris or Washington.

Oddest of all, in comparison with Ottawa, is the place of the Clerk's Table. The front benches are set too far back for it to be used by, or at least within reach of, the Front Benches, as they are at Westminster. But on either side of it are places for two leaders from each side.

More usually, only one of them is occupied. The prime minister sits on one side of the table in splendid isolation. He cannot consult his colleagues without a painfully obvious move. It would be much easier to consult the Leader of the Opposition, who is glaring at him from the other side of the table.

A further complication is that parliament insists on having its proceedings broadcast, from beginning to end, by one of the networks of the Australian Broadcasting Commission.

Yet it has not arranged its microphones as well as the Canadian and the U. K. Houses of Commons have done—without any thought of broadcasting.

The two party leaders, in their splendid isolation at the table, have a microphone in front of them. Other speakers have to make their way to a position in front of a microphone. Then they clear their throats and deliver their statements.

The public reaction, as heard in the highways and byways, suggests that respect for parliament is not increased by these broadcasts.

One of the principal newspapers, the other day, was proposing a way to organize a good evening's entertainment out of them.

It was along the lines of a bingo. Each player first had to write out, around the fireside, a list of cliches. Examples offered included phrases such as:

"I repeat, Mr. Speaker, and I cannot emphasize to strongly . . ."

"The people of Australia, Mr. Speaker, will not be taken in by this . . ."

"I call this a barefaced attempt to delude . . ."

"If my hon. friend had only taken time to look at . . ."

Then each spot on the board was marked with one of the selected cliches.

All the players listen to the radio. When a parliamentary orator says: "I repeat, Mr. Speaker . . ." that is equivalent to a caller shouting "under the B—7".

In one final respect, the Australian Parliament has hit upon an arrangement that might well be worth consideration at Ottawa. Instead of concentrating its sessions, it spreads them out.

Members here get free travel to and from their ridings by air.

Now they sit only three weeks out of four and they cram all their sittings into the time between Tuesday noon and Thursday evening.

Tuesday's sittings are from 2.30 to 11 p.m., Wednesday's from 11 a.m. to 11 p.m. (meal hours off, of course), and Thursday's from 10 a.m. to 6 p.m.

It certainly gives all members a chance to keep in touch with home.

PARLIAMENT HOUSE at Canberra flies two flags at the entrance indicating that both the Senate and the House of Representatives are in session. Capital Territory is 939 sq. mi.

States Depend on Tax Grants

When the five colonies scattered around half the coastline of the Australian continent federated in 1901, they chose to follow the U. S. pattern of federation rather than the Canadian in a number of respects.

They were "states-righters". They thought the federal government—as they call it, the "Commonwealth Government"—would handle a number of "central" government activities, and they spelled these out. Everything else was to remain with the states—and they used the U. S. word, rather than the Canadian word "provinces".

The approach was exactly opposite to that of the Canadian Fathers of Confederation, who on the whole expected the provinces to relapse into the role of purely local governments.

Yet Australia's government is now far more centralized than Canada's.

The states live on "tax reimbursement grants" from the Commonwealth together with a variety of other grants.

They have yielded their right to borrow money to the Loan Council. It meets each year, and the federal treasury, in effect, tells the states how much money they can raise by new issues each year. All the state loans carry a federal guarantee.

An additional, and smaller, sum is settled each year which semi-government bodies, like state electricity commissions may raise on the security of their states.

The tax reimbursement grants, settled on a new basis in the summer of 1959, have an automatic escalator clause for future years.

Two states, Western Australia and Tasmania, are also entitled to additional grants fixed by an independent body, the Commonwealth Grants Commission, according to an elaborate formula. It is designed to enable them to maintain a similar level of services to the other states, provided they also make an equivalent taxing effort.

The grants for the present year in millions of pounds are: New South Wales, 83.45; Victoria, 60.625; Queensland, 36.375; South Australia, 27-.675; Western Australia, 25-.462 plus Commission grants; Tasmania, 10.913 plus Commission grants.

Another oddity is that Australia has the power Canada lacks to amend its own constitution. But very few attempts at change have succeeded.

Only two really significant amendments have been made, according to Sir Robert Garran. They were the financial agreement on federal-state powers, reached in the depression, and the Social Welfare Amendment in 1946.

The final stage of the amendment process involves a referendum, and the voters have been most reluctant to approve changes except in cases where all parties supported them (and not always then).

The constitutional clause which has had the strangest effects is Section 92, which says: "Trade, commerce and intercourse between the States shall be absolutely free".

Judicial decisions by the Australian High Court and the Privy Council in London (to which appeals may be taken only by leave of the High Court) have turned this clause into something like a built-in guarantee of a free enterprise economy.

By their decisions, Section 92 means:

- **That the banking system** cannot be nationalized.
- **That the government** may run a domestic airline, but may not give it a monopoly.
- **That inter-state trucking** cannot be taxed.

Defence Policy Based on SEATO

By **Hon. ATHOL TOWNLEY, Australian Minister for Defence**

Australia is a large island continent situated in the South Indian and Pacific Oceans. It is populated by a people mainly of British origin, who have established for themselves a way of life based on western culture and traditions.

It is 9,000 mi. from the great western civilizations of Canada and the U. S. It is 12,000 mi. from the U. K. and is separated from Western Europe by the great land masses and peoples of the Middle East and Southern Asia.

Australia is isolated geographically from the rest of the western world.

Traditionally, isolation has been its principal means of defence. So long as the Royal Navy, assisted by the Royal Australian Navy, maintained freedom of the sea lines of communication, Australia could feel safe from direct invasion.

Its defence policies were devised to meet possible sporadic raids.

However Australia has always been active in Commonwealth defence. From 1885 onward, when a New South Wales contingent served in the Soudan campaign, Australia has been able, in times of war, to raise large expeditionary forces and send them overseas, to fight in distant theatres of war, without requiring to give great thought to the needs of home defence.

On Feb. 19, 1942, a devastating Japanese air raid was launched upon Darwin, the seat of administration of the Northern Territory.

This raid and the movement of the war to the islands immediately north of Australia, had a profound effect upon Australian strategy. For the first time in Australia's history enemy bombs had fallen upon its soil and its people had died as the result of enemy action. For the first time Australia faced an invasion threat.

Australia emerged from World War II aware that it could no longer rely upon the Royal Navy for its external security, aware that it now had its own problems of immediate defence and also aware of the changed political situations in Communist China and South East Asia, now for the first time regarded as neighbors.

It was natural therefore that Australia's postwar defence policy should be devoted to consolidating her unique position in South East Asia.

In particular, as a long-term defence measure, Australia has engaged in a large-scale intake of new people, associated with a corresponding development of her technical skills and industries.

Nonetheless, because of her limited resources, Australia participates in regional defence arrangements in conjunction with the U. S., her Commonwealth partners, the U. K., New Zealand and countries of South East Asia.

As a partner in these defence arrangements, Australia's role includes the building up of her manpower, industrial resources and skills and the provision of compact, highly efficient mobile forces, armed with the most modern weapons and equipment available.

Australia therefore places great importance upon participation in the SEATO and ANZUS pacts, and upon the over-all defence arrangements of the British Commonwealth of Nations.

From the strategic aspect, global or full-scale war is considered to be unlikely as a deliberate act of policy because of the nuclear deterrent, though it is recognized that it could occur through miscalculation in periods of tension or limited war.

The outbreak of limited wars is more likely in the various unstable areas from North Africa to the Far East.

Australia's defence effort is designed to give priority to cold war measures such as the stationing of forces in the Commonwealth Strategic Reserve in Malaya, and the provision of highly mobile forces ready to meet (in conjunction with our Allies) a limited war situation promptly and effectively.

Our forces therefore have been planned to meet this particular need.

- **The Royal Australian Navy** during 1959-60 will have in commission, H.M.A.S. "Melbourne", the flagship of the Australian fleet and one of the most modern aircraft carriers of its type, six destroyers, including three new Daring Class, eight frigates of which four are for anti-submarine duties and a number of smaller craft.

The front line aircraft of the Fleet Air Arm are Sea Venom jet fighters and Gannet turboprop anti-submarine aircraft.

Australian shipyards built the Daring Class destroyers and are now engaged in building fast anti-submarine frigates for the Royal Australian Navy.

- **The Australian Army** in the past has depended upon its citizen or militia forces, from which to recruit the nucleus of the volunteer expeditionary forces it has sent overseas. The changing situation now requires the existence of a small regular standing army, which can swiftly move into action in any threatened area.

With this aim in view a regular army brigade group has been organized as a cohesive battle formation and equipped with the most modern weapons that we can obtain.

Behind the regular army, in reserve, stands the citizen army, a volunteer organization which may be mobilized for the defence of Australia and its territories or may provide the trained soldiers for an expeditionary force if one has to be raised.

- **The Royal Australian Air Force** comprises 15 squadrons and supporting units. Because of the special needs of mobility, the R.A.A.F. has recently been equipped with C130 Hercules transport aircraft, which already has greatly enhanced the means of reinforcing our forces in Malaya.

It has been our policy to develop our own defence industries. Mention has already been made of the Australian built destroyers and frigates.

The Australian aircraft industry has produced the Canberra bombers and Avon Sabre Jet fighters with which the front line fighter elements of the Royal Australian Air Force are equipped.

Our small arms factory is now manufacturing the F/N rifle which already is on issue to units of the Australian Army. At the same time, equipment will be standard, or compatible as far as possible, with that used by the U. S. armed services, with whom they are associated in defence arrangements.

The joint U. K.-Australia long range weapons project continues to be a major item in Australian defence research and development. The weapons range at Woomera in South Australia is now being extended to a length of 1,250 mi. terminating on the north west coast of Western Australia, to provide for advanced types of weapons to be tested.

The guided weapon tests at Woomera have been greatly assisted by the Jindivik pilotless target aircraft, a product of our own aircraft industry.

In 1951 the Australian government decided to enter the guided missile production field. It was decided to concentrate on one weapon, Malkara—an anti-tank missile. Recently, Malkara has been accepted as standard equipment for the British Army.

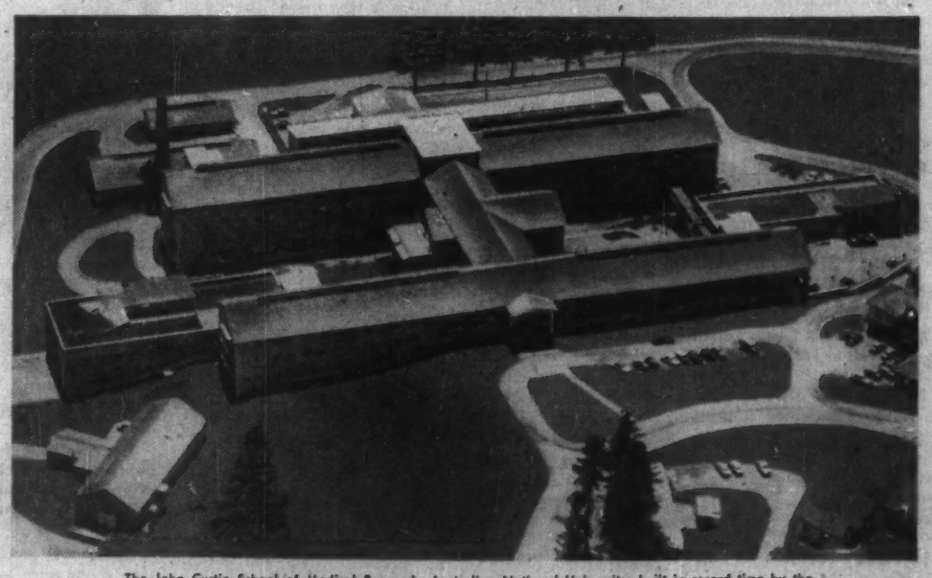
The Australian government plans for a substantial increase of its population and industrial capacity. However, because of its limited resources and its isolated position, it must continue to rely upon regional defence arrangements with other friendly countries.

It is able however to play an important part in these arrangements, by the provision of compact, hard-hitting forces readily available to meet an emergency, and by providing in the South East Asian area a defence industry capable of rapid expansion should the need arise.

CANBERRA

-Capital City-

Invites Investors in Capital Growth



The John Curtin School of Medical Research, Australian National University, built in record time by the Karl Schreiner Organization which was selected from many other Canberra and national Australian builders to construct this monument (to a leading Australian citizen) — and other projects including housing settlements (two of which total more than 200 homes, schools and other public buildings).

The Capital City of Australia, Canberra, is a symbol of the Australian Continent's powerful, dynamic new growth. It is also a standing invitation to capital investors to share in the profits of that growth — on a sound and assured basis.

The leading building contractor of Canberra, Karl Schreiner Pty. Limited, builder of some $20,000,000 worth of Canberra structures in the past 7 years, invites your attention to the fact that Canberra, as the growing capital of a growing nation, is in need of modern hotels, office buildings, a skating rink, and other vital amenities to living in a modern capital City.

Your invested capital will be guaranteed by long leases and assured of attractive returns.

DARLING HARBOR, one of the principal wharf areas of the Port of Sydney, New South Wales, is only a few minutes from the main business centre of the city. Most of these wharves are leased to shipping companies.

Transportation

Seacoast Links States

Australia is just like Canada in its urgent need for economic transport, since both countries are scattered, with huge distances between the centres of population.

No detached observer in either country will claim great success for his government's handling of this crucial national problem. But it is wonderful to observe that the two countries have followed almost completely opposite courses and achieved almost equally unsatisfactory results.

Australia has one obvious and overwhelming natural advantage offering cheap transport between the states.

Instead of being strung out in one straight line along a land frontier, as Canada's centres of population are, **Australia's** state capitals are spread around its huge coastline. They are linked by the freest and most economic medium of transport that exists on this earth — the sea.

Today, most of the ocean liners from Europe and Asia call first at Fremantle (W.A.), then sail around the south coast to Adelaide (S.A.), proceed to Melbourne (Vic.), and on up the east coast to Sydney. In old days, they would go on to Brisbane (Queensland), but this is not so common now.

They are sternly forbidden to pick up a cargo at, say, Adelaide and take it to Sydney. That privilege must be reserved for Australian ships. And Australian ships have pushed their rates so high that, on most package freight (at least), they are not competitive. Yet the ocean liners will not be given a permit to carry coastwise cargo unless they can prove no high-cost Australian vessel available.

In the trade between neighboring ports in the same states, large fleets of small vessels have always found a good living. Now they are down to 29 little ships of less than 1,000 tons each, most of which are carrying coal between Newcastle (barely 150 mi. north) and Sydney.

In interstate trade Australia can now boast of 139 vessels "licensed" under the Australian Navigation Act. Their average size is about 5,000 deadweight. Passenger-carrying ships are gradually disappearing and there are no tankers in the "licensed" fleet.

This is lucky because it means ocean-tankers can get a permit to carry oil around the coast. For example, **BP** tankers which bring crude oil to the company's refinery at Kwinana, W.A., are by "permit" allowed to carry the refined products to the eastern states.

The only thing which keeps the coasting fleet going is the number of bulk cargoes to be moved around the coast.

In the last four years the general cargo lifted in "licensed" Australian ships has dropped by 17%. Between this great port of Sydney and the port of Melbourne — which should be the largest and most profitable trade of all — general cargoes carried by sea have dropped, in the same short period, by 37%.

The shipping industry, much of it now government-owned, takes comfort from the growth of traffic in certain bulk cargoes.

The most important of these — and the one with the clearest need for cheap maritime transport — is iron ore.

B.H.P., the great iron and steel enterprise, brings all its iron ore to the steel mills at Newcastle and Port Kembla near Sydney by ship. Most of it comes from the Iron Knob mountain in South Australia, and is put on shipboard at Whyalla.

Another supply comes by sea from Yampi Sound, in the north of Western Australia.

But there is another sidelight on these bulk cargoes.

It comes from the sugar trade, which is now busy installing bulk-handling equipment at every little port up the Queensland coast from which it ships sugar.

The boast you often hear repeated — by the Premier of Queensland and others — is that the new equipment has reduced the loading time from three weeks to two days.

But that is missing the point. The real economy is not in time so much as in manpower. At one newly-equipped port — you may discover by enquiry — three men are now doing in two days what 148 men used to do in three weeks.

The worst villain, it has been said, is not the seamen's union, but the "wharfies". As much as 80% of the cost of coastal freights has been attributed to the exorbitant charges of the stevedores.

So, at one little sugar port alone, 145 men have lost their jobs. And they will never get them back.

A well-informed Australian observer divides the blame among the communist-led unions and the ship-owners.

There could not be a greater contrast between the policy Australia has followed, and the action Canada took two years ago in selling the government-owned fleet of Canada-West Indies Steamships rather than meet crippling demands by the union.

The contrast is equally great in the interpretation which the two countries have put upon the British Commonwealth Merchant Shipping Agreement.

Canada feels bound by the agreement to give any Commonwealth ships (which in practice means U. K. ships) equal access to the coasting trade between two Canadian ports.

Even the opening of the St. Lawrence Seaway, and the threat of U. K. ships operating in the inland lakes against Canadian lake carriers, did not shake Canada's determination in this matter.

Australia, on the other hand, repeats earnestly that all Commonwealth ships are treated equally.

"Any ship that meets Australian conditions," the officials say blandly, "may take out a license to engage in the coasting trade."

Airlines In Odd Battle

When Canadians complain of **TCA's** slightly-dented monopoly over domestic air routes, they think of the alternative as a competitive system. To judge from experience here, competition may not be just what it seems.

Australia has two principal airlines in competition on the main trunk routes across the Continent.

One is **Trans-Australian Airlines,** owned by the government and operated by the Australian National Airlines Commission. The other is **Ansett - ANA,** a company formed under the control of Reginald Ansett when he took over the failing **Australian National Airways** in 1957.

The personal service seems first-rate on both lines and a Canadian is impressed, in contrast to our easier ways in Canada, by the punctuality of the flights.

The only annoyance is that on nearly all the main routes they both fly at the same time.

If you begin to suspect that these schedules are due to collusion between the two lines, you are quite right.

It is a collusion forced on them by the government. The private line is obliged to consult with TAA about schedules and frequencies and all sorts of other operating matters and the two lines are required to reach agreement. If they don't, they must come together before a government arbitrator.

In broad outline, here is the dilemma in which the Australian government finds itself with two airlines:

Air Traffic

	ANSETT-ANA %	T.A.A. %
Calendar Year, 1958	46.3	53.7
1958 load factor	57	71
1959 1st qtr.	47.2	52.8
1959 2nd qtr.	52.8	47.2
1959, July ..	50	50

It is not only by conviction that the present government is determined to maintain two services.

This results from one of those judicial interpretations of Section 92 of the Constitution which also let the inter-state trucking go free of control.

The High Court's interpretation of keeping "trade, commerce and intercourse between the states absolutely free" holds that it does not prevent the government from running an airline, but it does forbid the government to have a monopoly.

So, whether it likes it or not, the government must keep a private line operating as well.

It hasn't been easy to keep a private operator going. Until a couple of years ago, the candidate was Australian National Airways which simply couldn't keep pace with TAA's competition.

When, after difficult negotiation, Ansett Airways took over ANA, one of the conditions was that government would guarantee loans up to a certain amount to finance new equipment for Ansett-ANA as well as for the government line. (That's how it has the power to compel consultation and agreement with TAA).

It would have been difficult enough if the private airline was using private capital, and TAA had to get government backing for all its moves.

But in fact the government was, by this time, underwriting the purchases of both airlines.

It could see no way out except to tell each of them what it could buy, and keep them on a more or less equal footing.

That's the way it has worked out in Australia and all airline men will agree that when you remove all chance of competing in equipment you remove the real heart of competition.

But the Australian government's position has obvious and penetrating logic in it.

And after all, competition does remain in a field which is pretty important — the whole business of passenger-handling.

There is little reason to complain of the results. But the idea of two competitive airlines may not be just what it seems.

These Men Can Help You

To assist businessmen seeking further information on Australian-Canadian trade opportunities, here are the addresses of Canadian representatives in Australia, and Australian representatives in Canada:

CANADIAN REPRESENTATIVES IN AUSTRALIA

HIGH COMMISSIONER: T. W. L. MacDermot, State Circle, Canberra, A.C.T.

TRADE COMMISSIONERS:

Melbourne: T. Grant Major, 83 William Street.
Sydney: S. V. Allen, 82 Elizabeth Street, P.O. Box 3952, G.P.O. H. S. Hay.
Canberra: To be appointed.

AUSTRALIAN REPRESENTATIVES IN CANADA

HIGH COMMISSIONER:
Maj. Gen. Sir Walter Cawthorn, C.B., C.I.E., C.B.E., 100 Sparks Street, Ottawa.

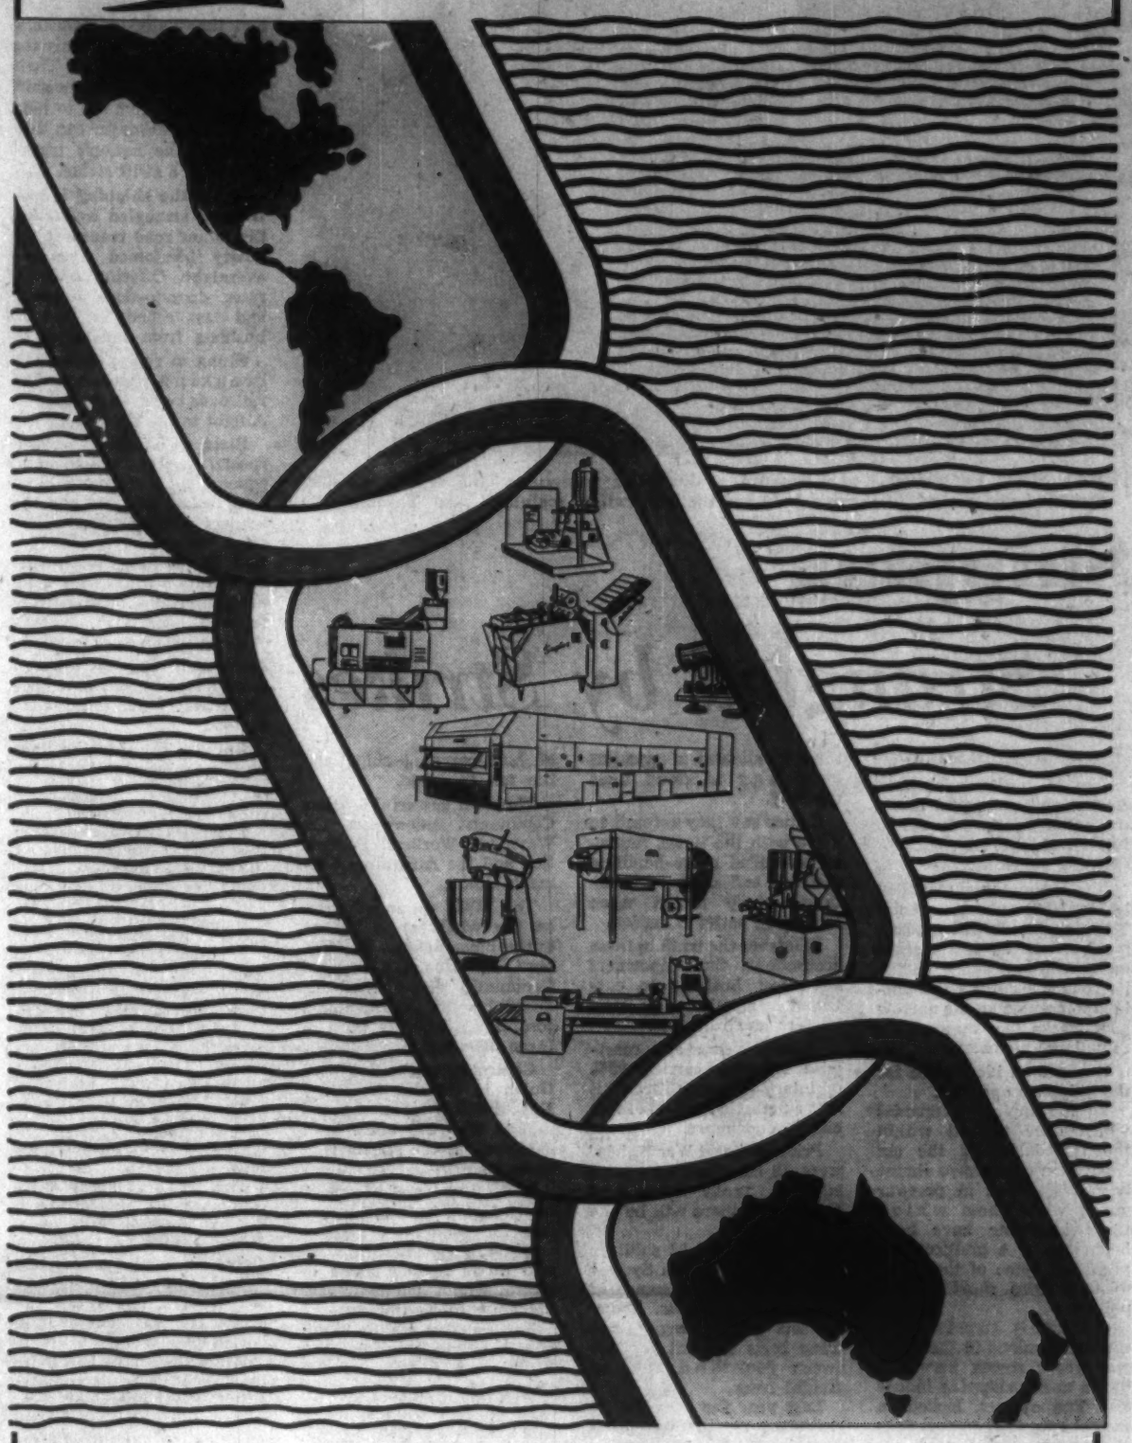
TRADE COMMISSIONERS:

Vancouver: Mr. C. A. Allen, Australian Government Trade Commissioner, Suite 608, Sixth Floor, Burrard Building, 1030 W. Georgia St.
Montreal: Mr. R. R. Ellen, Australian Government Trade Commissioner, 1255 Phillips Square. Mr. G. B. Zegalia, Assistant Australian Government Trade Commissioner.
Ottawa: Mr. R. W. Hudspeth, Australian Government Trade Commissioner, Royal Bank Chambers, 100 Sparks St. (Mr. Hudspeth will arrive in Ottawa during January to open this post.)

MacDERMOT

CAWTHORN

THE BEST OF TWO WORLDS



AUSTRALIA'S LEADING SUPPLIERS

Mauri Brothers & Thomson Limited is an old-established Australian Company with its head office in Sydney and with branches in the capital cities of all States of Australia and New Zealand.

It is the **largest** business of its kind in Australasia and represents the leading manufacturers of Great Britain, the United States of America and the Continent of Europe in the fields which it serves.

Its business is the supply of plant, equipment, raw materials and services to the aerated water, baking, brewing, food manufacturing, chemical, dairying, butter making and allied industries.

In addition to its merchant and agency business, which is conducted through its eleven warehouses, the Company operates a large number of factories and engineering workshops, in which are manufactured a considerable portion of materials, plant and machinery for the industries it serves in Australia and New Zealand. Many of these are made under licences granted by world-renowned firms. Its operations are backed by a research laboratory which is one of the best equipped in Australia.

The Company also maintains close technical and business associations with many organisations on the American continent.

FERRY SHIP, the Princess of Tasmania, a 4,600-ton passenger and vehicle carrier, provides fast overnight service between the Australian mainland and Tasmania.

Shipping

Strangled by Strikes

By W. R. OLSON

One of the paradoxes of Australian commercial life is the nation's failure to use to full advantage its coastwise shipping lanes.

It is a country surrounded by navigable waters, plentifully supplied with good ports, relatively poorly served by railroads and bouncing its road transport from pothole to pothole on the narrow goat tracks that masquerade as national highways.

It seems an ideal place for the shipping operator.

Yet shipping companies which once thrived within the boundaries of the six Australian states have almost been wiped out in postwar years, while those which trade interstate have been bedeviled by a multitude of problems, some of them due to their own short sighted policies.

Communist dominated maritime unions in the postwar years struck savage blows at the shipping industry. The owners, locked in mortal industrial combat with these power drunk organizations, allowed a peculiar lethargy to cloud their thinking.

Critics say they refused to move with the times, retained outmoded cargo-handling methods and stuck to traditional ship design when something better is needed.

Whatever the truth in these accusations, the shipowners have lost business to cut-throat competition by road haulers and railroads.

Twenty years ago coastwise shipping carried 95% of interstate cargo. Today it lifts a pathetic fraction of that once proud figure.

Prior to World War II there were 12 fine passenger ships running. Today there are three. Soon there will be one — a car ferry.

In 1939 it cost 22 shillings to ship one ton from Sydney to Melbourne, a distance of about 450 sea miles. Today it costs 146 shillings. Handling costs account for between 60% and 80% of freight rates.

Last year the Stevedoring Authority closed three ports because of the introduction of bulk-carrying ships and the fall in trade.

The most powerful of these Communist unions are the Waterside Workers' Federation and the Australian Seamen's Union.

The WWF (as it is known on the wharves) is led by burly, pipe-sucking, English-born Jim Healy, a devoted Communist and shrewd industrial tactician. His union controls all laboring work in cargo handling.

Controller of the Seamen's Union is General Secretary E. V. Elliott, a fanatical Communist who has often been described as the shipowner's nemesis.

Both WWF and the Seamen's Union have black records for strikes.

Often nearly 100 ships were tied up in Sydney alone in strikes which had their real basis in political protests.

Far too often for the liking of the average Australian the WWF's policy followed the Moscow line.

In an endeavor to inject some stability and authority into the turbulent stevedoring industry a former Labor government created a board with powers to discipline both employee and employers, and to conciliate in industrial disputes.

It is now known as the Stevedoring Industry Authority under the chairmanship of J. M. Hewitt.

But the Seamen's Union and the Waterside Workers' Federation now have only the dreams of past glories. Their powers have faded in the shift of emphasis from sea to land transport. No longer can they paralyze the nation's transport with a swift strike.

While the shipping industry was strangled by strikes the infant road transport industry blossomed almost overnight. Offering cheap rates, door-to-door delivery, and fast schedules it took business from the ships.

Stung to reply, Australia's creaking, state-operated railroads began to reorganize. A fight to the death began.

State governments moved special Acts of Parliament to squeeze out road competition. Court cases followed and the haulers were allowed to expand operations under Section 92 of the Australian Constitution which says trade between states must be unfettered.

So the railroads streamlined their services, lowered rates, loaded goods into special steel, pilfer-proof containers.

But still the shipping lines were too preoccupied with the industrial brawls to join in the fight for business.

Under the SIA's quota system the over-all strength of the WWF in 1954 was 28,377 men. Last year it was 23,126 and is still falling.

The Seamen's Union faces the same situation. Bulk ships have a lower manning scale than the passenger ships. One bulk ship does the work of three or four general cargo carriers. Fewer men are needed. The ones left face a black future.

The coastal fleet today falls just short of 170 vessels of more than half a million gross tons.

The private enterprise companies are fully aware of the attraction of bulk ships under Australian conditions and have formed a company to build and operate two 14,000 tonners. These are expected to be in operation within two years.

While they have had more than their share of troubles with Communist unions, Australian shipowners generally speaking have enjoyed protection from foreign and British shipping competition.

Under the provisions of the Australian Navigation Act, British and foreign ships cannot engage in coastal trade unless the Minister for Shipping gives specific permission. He may only do this if he is satisfied that the local services cannot fulfill requirements of shippers.

Even British and foreign lines regularly trading to Australia cannot pick up cargo or passengers for carriage interstate.

In special circumstances the deputy director of navigation in each state can give a ship the necessary permission (if applied for), but only after a thorough investigation has revealed there are no local ships with berths or space available.

Thus a British passenger ship from England making her first port of call at Fremantle on the West Coast cannot pick up passengers for the ports of Adelaide, Melbourne or Sydney in the east if one of the two remaining Australian passenger liners is about with empty berths. The same situation applies to freighters.

Many businessmen believe a more enlightened commercial outlook is necessary for local shipping to expand.

They claim that Australian ports and cargo handling facilities are outdated.

J. M. Hewitt of the Stevedoring Authority says critically of cargo handling: "Our methods should be different to those used in ancient Egypt."

There is hope that some of the general cargo trade could be recaptured by car and semi-trailer ships like the "Princess of Tasmania" and by ships constructed to take sealed steel containers loaded directly from trucks on the wharves.

But this point stands out for all to see and wonder at: While huge road transports crumble to dust the poorly constructed and narrow interstate highways, the highway of the sea continues relatively poorly exploited by the carriers of the nation's goods.

Chance To Fix Rebuff

Early next year the Conservative government of Canada will have a chance to correct a rebuff given to Australia six years ago, which still smarts down here.

But Transport Minister George Hees has inherited a bad case, and no specific way out of the impasse has yet emerged either here or in Ottawa.

The test will come in Ottawa, probably in January or February, when Canadian and Australian negotiators make their third attempt within a year to patch up a civil aviation agreement.

The first attempt nearly a year ago ended in complete failure.

The second was launched simultaneously with the Canadian-Australian negotiations for a new trade agreement. It at least cleared the way for further talks — and even that achievement meant a considerable improvement in the atmosphere.

The latest talks were held in Melbourne, the headquarters of the Australian Department of Shipping and Transport. T. W. L. MacDermot, Canadian High Commissioner to Australia, joined with Gerald Morrisset, member of the Air Transport Board, who had come out from Ottawa.

The Australian negotiators were headed by D. G. Anderson, Director-General of Civil Aviation, who is also coming to Ottawa for the third round next year.

The sad story starts in 1954.

In that year, Australia had become very much concerned about the security of its "Kangaroo Route" to England via Singapore, India and the Middle East. It was determined to establish a second through service the other way around the world.

This meant getting new rights across the Pacific and then across North America to London.

The Australian request was put in extreme form. Characteristically, it asked for an Australian route Sydney - Vancouver - Montreal - London, including the right to carry passengers across Canada from Vancouver to Montreal.

Instead of taking this all-inclusive request as a starting-point for negotiation, and considering how far Canada could go to meet it, the Canadian government brushed the whole thing aside.

The Australians say they received a "contemptuous rejection" and turned to the U. S.

The Australian-U. S. agreement was signed in 1956. **Qantas,** operating its pooled service with **BOAC,** now flies its **Boeing** jets Sydney-Honolulu-San Francisco-New York-London.

It cannot take passengers between any two U. S. points, but it can pick up at Honolulu, San Francisco or New York for London, or on the return journey for Australia.

It runs a feeder service up to Vancouver from San Francisco at infrequent intervals.

The agreement with the U. S. has given Australia all it wanted.

Canada's brusque refusal to co-operate six years ago left Canada with no bargaining cards to play in the negotiations with Australia.

In 1954 Australia was the party wanting the concessions and Canada had the cards.

Now Canada wants the concessions — to keep a Canadian carrier on the Pacific route from Vancouver — and Australia has all the cards.

The worst of it is that Canada's decision made it more difficult for this country to cash in on traffic originating in Australia.

This was brought home vividly by a senior executive of one of Australia's biggest department stores.

His stores' buyers go regularly to the U. K. and Europe and always stop at Chicago.

"We used to send them to Canada, too," he said, "but it's off the direct route, you know. And there's really nothing to go for. We might go occasionally, but it would just be a gesture. There's nothing there we can't see in London or Chicago."

The other Canadian interest involved in the Australian air talks is the air route across the Pacific.

On the strict letter of the law, **Canadian Pacific Airlines'** Vancouver - Honolulu - Fiji-Auckland-Sydney service could be cut off before the end of this year.

It won't be, because the Australians are not being vindictive.

But it has had an unhappy history.

By the original agreement of 1946 Canada was to be allowed a fortnightly service. At some early stage CPA raised this to weekly and "forgot" to ask Australian permission until after the service had started.

After the breakdown of the 1954 air talks, Australia could have canceled CPA's permission to land at Sydney or at least have insisted on its cutting back to a fortnightly service.

Ever since then, the CPA Vancouver - Sydney service has been continued on a temporary basis, six months or a year at a time.

Meanwhile the opening of the CPA trans-Arctic route from Vancouver to Amsterdam has given the Australians another grievance.

"This made it even worse," one authority said. "Obviously the CPA route is now being developed as a through service from Europe to Australia. That wasn't the bargain. It was meant to be a Canada-Australia service.

"The truth of the matter is," he went on, "there isn't enough traffic for a weekly service, Vancouver - Sydney. Do you know how many passengers there are originating in Canada for Australia? The average is 18 a week. That just isn't enough."

Constitution

Follows U.S. Pattern

By HON. SIR GARFIELD BARWICK, Q.C., M.P.
Attorney - General of the Commonwealth of Australia.

Australia's constitution, like Canada's, is a federal system, established by an Act of the U. K. parliament. Australia's was proclaimed in 1901, 34 years after the passing of the British North America Act.

The Australian division of powers is between the six state governments and one central government, which we call the Commonwealth.

The division was made after careful examination of the U. S. constitution, of Canada's and of Switzerland's.

The makers of Australian federation decided to follow the U. S. pattern, rather than Canada's, in important respects.

In particular, the central (Commonwealth) government is vested with a list of enumerated powers. Unlike Canada, there is only one list, and all the powers not on it (the "residuary powers") are retained by the states. The Australian federal government, unlike the Canadian, has no "residuary powers".

The two Australian houses of parliament bear the names of their U. S. counterparts—Senate and House of Representatives.

The Australian Senate, as in U. S., is elected.

But in relations between the executive and the legislature the Australian constitution, like Canada's, adheres to the British system.

As in Canada, executive power lies with the Governor-General. An Executive Council corresponds to the Canadian Privy Council, and the Australian Cabinet, like the Canadian, is responsible to parliament.

An important difference between the Australian and Canadian constitutions is that the Australian lays down a specific procedure for amendment, while the British North America Act does not. The Australian constitution can be amended in Australia without reference to Westminster.

Any proposed change must be approved, first, by both Houses of Parliament. Then it must be put to the people in a referendum. To take effect, it needs the support of a majority of all the electors voting in the Commonwealth and also of a majority of the electors in at least four out of the six states.

Many proposals for amendment have been submitted to referendum, but very few of them have cleared all the hurdles.

Provision also exists for the states to refer powers to the Commonwealth, but generally they have been reluctant to do this.

In a practical sense, the working of a federal system depends, more than on anything else, on the financial relations between the federation and its component unit.

Perhaps because of national responsibilities in defence and external affairs, it is an invariable feature of modern federal constitutions that the financial settlement places the federation in a position of substantial preponderance.

The corollary is that the component states or provinces are likely to be left with financial resources quite unequal to their constitutional responsibilities, in the fields particularly of development and social services.

Accordingly, the adjustment and redistribution of revenues between the federation and its component units has been a regular feature, and a continual source of controversy, in all modern federal systems—including both Canada and Australia.

In Australia, the respective taxing powers of the Commonwealth and the states are more simply stated than those of the Dominion and provinces in Canada, but in substance they are closely similar.

The only field from which the states are legally excluded is that of customs and excise, which before federation was the principal source of revenue in the states. Now it belongs to the Commonwealth alone.

A basic constitutional requirement in Australia, however, is that a federal tax may not discriminate between states or parts of states. In effect, it must operate on a uniform Australian-wide basis.

This provision makes it impossible for us to adopt a system like the tax rental agreements which have been so prominent a feature of the postwar Canadian fiscal system.

But the Commonwealth has power, under section 96 of the constitution, to grant financial assistance to any state "on such terms and conditions as the parliament thinks fit". The Commonwealth has used this power extensively.

The states are now receiving something like two thirds of their total revenues from federal grants.

A small proportion of these grants is made for purposes specified by the Commonwealth, usually in agreement with the states—just like Canada's "matching grants".

Illustrations are grants for main roads, housing, and war service land settlement.

Otherwise the Commonwealth grants are all "without strings". They form part of the general revenues of the state, to be appropriated as the state parliament itself determines.

In 1942, as a war-time measure, the Commonwealth imposed an income tax at rates so high as to leave no effective room for the continued taxation of incomes by the states. Along with this, it offered a "reimbursement" grant, under section 96, to any state which imposed no income tax of its own.

This arrangement has operated since 1942. It has ensured that the states evacuate the whole field of income tax.

The validity of the arrangement (commonly, but rather misleadingly, called "uniform taxation") has been upheld by the High Court.

The amounts payable to the states have been the subject of continual controversy, but have recently been fixed for a term of years by reference to an agreed formula.

As in Canada, the component units of the Australian federation differ widely in economic resources. Special arrangements have long operated to deal with the needs of the three less populous and prosperous states, South Australia, Western Australia, and Tasmania.

Since 1933, an expert non-political body named the Commonwealth Grants Commission has recommended what grants are required to enable each claimant state, with a reasonable financial effort on its own part, to maintain services on a basis reasonably comparable with those of the rest of Australia.

In practice, the grants recommended by this commission have always been provided by the parliament. This has effectively taken out of federal politics the special claims of the "have-not" states, as Canadians might call them.

Recently it was agreed that South Australia will not in future seek assistance through the Grants Commission except where there is a special need for it to do so. This means that there are now only two states that Canadians might call "have-nots"—Tasmania and Western Australia.

LOAN PROGRAMS

For many years after federation, the Commonwealth and the states borrowed independently of each other for development works and services.

In 1927 the Commonwealth and the states concluded a financial agreement under which the Commonwealth agreed to take over existing state debts and to undertake borrowing on behalf of the states as well as on its own behalf.

Under one of the few amendments to the Constitution, a Loan Council was established to control and arrange future borrowings of both federal and State Governments.

The Loan Council consists of one representative of the Commonwealth and one representative of each of the six States.

They meet in conference each year to determine the borrowing program of all governments for the next 12 months.

Semi - governmental authorities, like state electricity commissions and big city councils, have also been brought, by a gentleman's agreement, within this financial agreement and may not borrow without the consent of the Loan Council.

The responsibility for raising the agreed amount for the Commonwealth and the states is left with the Commonwealth, upon whose security the borrowings are based.

The federation of 1901 created a single national economy for Australia. To keep such an economy stable by the use of modern techniques involves many legal problems.

Some of the powers required to influence the economic climate lie with the Commonwealth parliament.

Among the most important are power to make laws about taxation, banking, overseas trade and commerce.

But the Commonwealth has no single power which explicitly makes it responsible for the state of the economy as a whole. In this it is like the Canadian federal parliament.

It would have been beyond the wildest dreams of the founders — in 1901 in Australia as in 1867 in Canada—that any government could exercise such a responsibility.

Undoubtedly the tasks of government are complicated in both our countries by the division of responsibilities between the central federal authority and the jurisdiction of states or provinces. But it has not held up our development, nor induced any lack of stability. And I do not believe our current expansion will produce any great problems which cannot be solved merely because of the distribution of powers.

In the main the Constitution has met the needs of the Australian community for nearly 60 years. I think it still meets them in this period of historic development.

SOUTH AUSTRALIA

is the fastest-developing Australian State. It provides a sound market for Canadian products.

Advertiser Newspapers Limited offers these exceptional opportunities to place your sales message before South Australians.

THE ADVERTISER

The State's best newspaper, with a circulation (182,000) approximately 50 p.c. greater than the other daily.

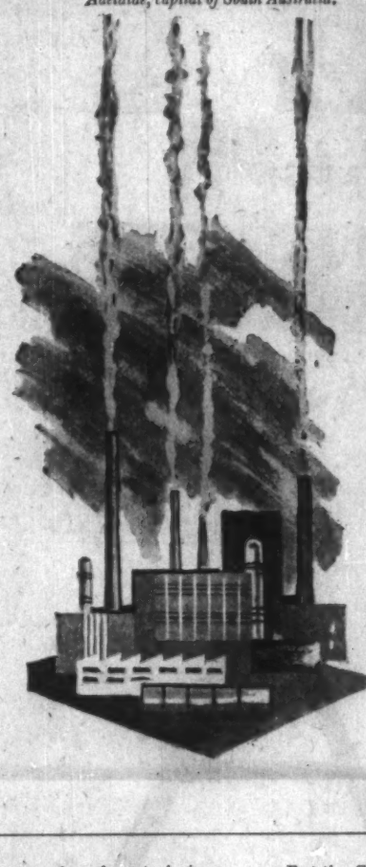
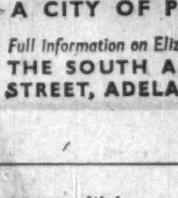
4 reasons why . . . ELIZABETH* is the ideal choice for your Australian Plant

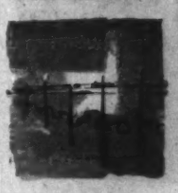


*ELIZABETH is a rapidly expanding, fully planned industrial, commercial and residential community situated 17 miles north of Adelaide, capital of South Australia.



Markets
for your product . . . healthy expanding markets are within easy reach of your plant site at ELIZABETH.

Accessibility
is the keynote of ELIZABETH, situated at the hub of the Commonwealth's great road, air and sea systems.



Power
in unlimited and uninterrupted supply makes production swift, sure and economical.

Labour
from an ever-growing work force which is being continually augmented by Australia's progressive immigration plan.

ELIZABETH
A CITY OF PROGRESS IN A STATE OF PROGRESS
Full Information on Elizabeth is available from:
THE SOUTH AUSTRALIAN HOUSING TRUST, 17 ANGAS STREET, ADELAIDE . . . SOUTH AUSTRALIA

An Australian wide organisation
ELDER, SMITH & CO., LIMITED
at your service

THE SCOPE OF ELDER'S SERVICES

Elders is an organisation with Branches in all Australian Capital Cities and London, as well as over 200 country Centres throughout the Commonwealth. The Annual Turnover for 1958/59 exceeded £110,000,000.

MERCHANDISE
With sales exceeding £20,000,000 in 1958/59, Merchandising is a very important part of the Organisation. A number of Departments handle Country Supplies, Veterinary Products, Light Farm Machinery, Building Materials, Timber, Steel, Chemicals and Engineering Supplies.

LIVESTOCK
Elder's Stock Department services every aspect of the Auction or private sale, or purchase of Stud, Export, Fat, Store and Breeding Livestock, conducting sales at all Capital Cities and at over 300 Country Centres.

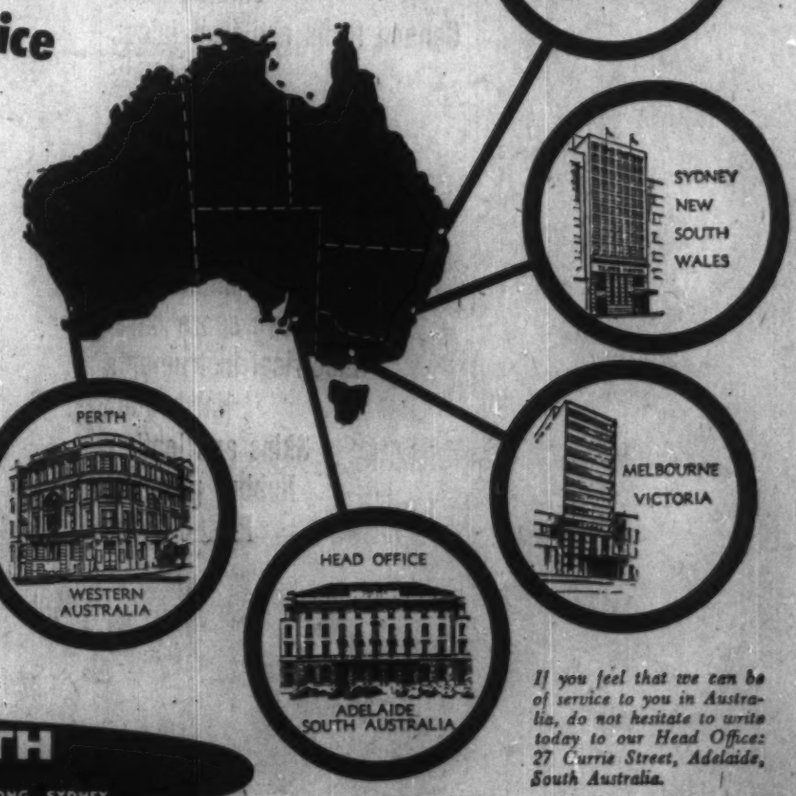
WOOL
The Company is the largest Wool-selling Broker in Australia, and conducts Wool sales by Auction at eight Australian Centres. Skins and Hides are auctioned in all Capital Cities.

LAND & PROPERTY
Qualified and well-trained staff in all States will arrange for inspection, valuation, purchase or sale of rural property. Advice given on rural investment in Australia.

BANKING AND FINANCE
The Banking and Finance Department provides many services including finance in pastoral and agricultural areas — supply of travellers cheques and overseas funds — accepts fixed deposits and offers facilities of current cheque accounts for Country clients.

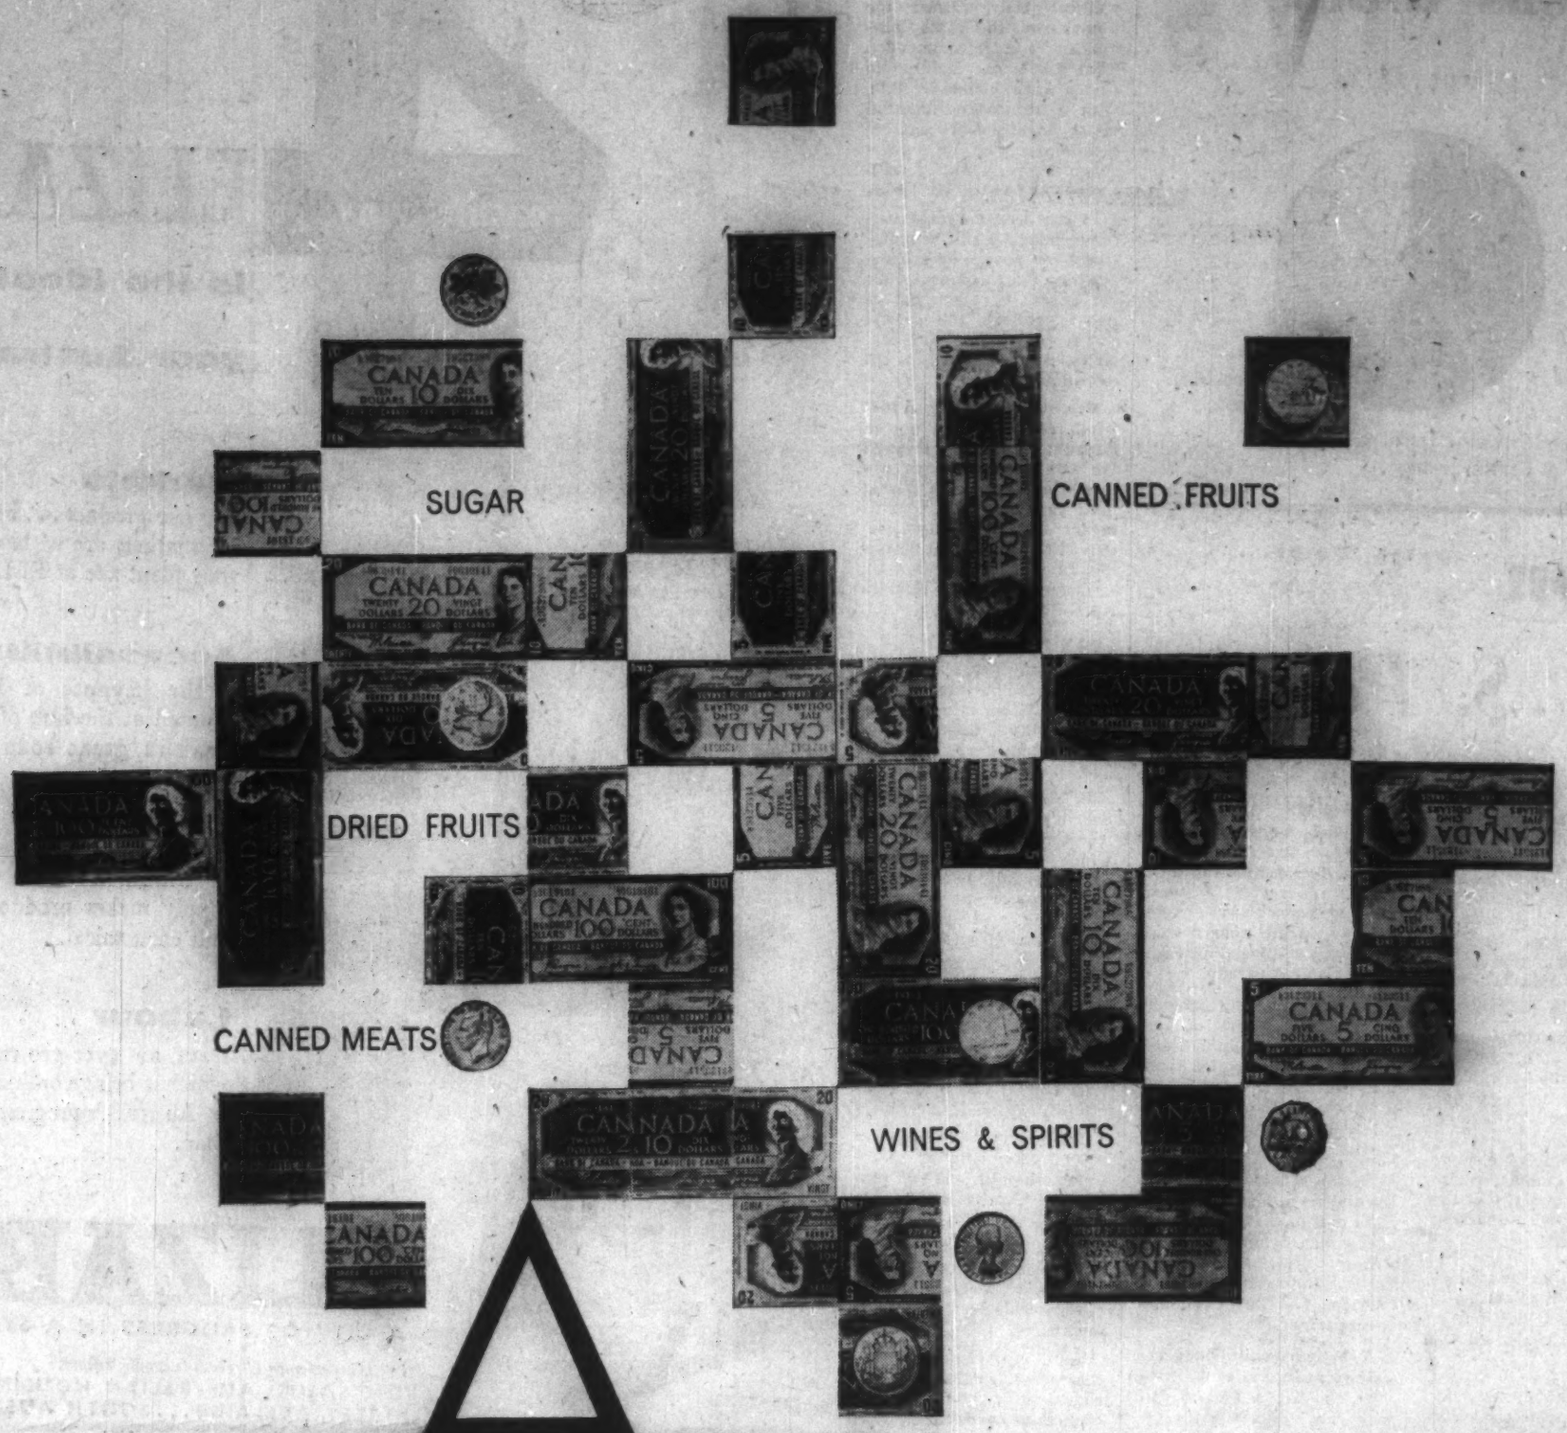
SHIPPING
Represents leading British, Dutch and Swedish Freight and Passenger Lines in South Australia, and Western Australia.

Other important services include CHARTERING, TRAVEL and INSURANCE



ELDER, SMITH & CO., LIMITED
ADELAIDE, PERTH, ALBANY, MELBOURNE, GEELONG, SYDNEY, NEWCASTLE, BRISBANE, LONDON

If you feel that we can be of service to you in Australia, do not hesitate to write today to our Head Office: 27 Currie Street, Adelaide, South Australia.



AUSTRALIA IS SELLING MORE GOODS IN MORE WORLD MARKETS THAN EVER BEFORE

Look to Australia for:

Sugar
Dried fruits
Canned meat
Canned fruits and fruit juices
Rice
Wines and spirits
Welded steel pipes
Hand tools
Building tools
Agricultural implements
Automotive spare parts
Electrical instruments
Hardwoods
Skins and leather
Rubber products
Plastic shoes

The evidence is everywhere and there's good reason why. Australia's rapid industrial expansion has brought an increasing diversity of Australian products on to world markets. The success with which many of them are breaking ground in once traditionally-held markets reveals their competitive worth. Around the world, many importers are finding a new source of profit in Australia's expanding industries. And Canadian importers no less. This year, Canadian housewives will buy more Australian sugar, dried fruits and wines than they have ever done, more fashions and fabrics too. Today, Australian-made cars are selling in 24 countries, while her spare parts and accessories are giving new life to thousands of cars and trucks on the roads of South-East Asia. With products as diverse as earthmoving equipment and surgical instruments, Australian industry is reaching into the major markets of the world.

Ask the Australian Trade Commissioner

for any information about trade with Australia. He will gladly help you. He can also put you directly in touch with Australian suppliers and manufacturers. There are two Australian Trade Commissioners in Canada, they are located at:
